

XAUI Adhoc Status

- Aim is to define and justify all required values
- Weekly telco still progressing with large participation
- All open issues identified and documented
- All actions delegated
- All actions to be final cleared by March 2001

Methodology for measurement

- Manufactures do not wish to standardise methodology and implementation
- 99151v2 document shall be referenced (details to be worked out)
- Generally methodology understood and agreed upon, still ongoing discussions about available equipment.

Compliance Patterns

- Proposal for strategy exist, details and final implementation to be discussed.

Receive Jitter Tolerance

- SJ Jitter Tolerance following methodology laid down by Fiber Channel.
- Comments exist about break frequency of tolerance
- Lower frequency shall be extended down to cover possible FIFO issues
- Concerns exist concerning total DJ jitter during compliance

Transmit Jitter

- Awaiting results of worst case compliance channel assessment, before transmit jitter specification and mask can be finalised.
- Initial worst case channel transfer function available, however, group delay or flat phase function needed as opposed to phase delay.

Additional Jitter Budget Issues

- All phenomena identified
- Discussions still ongoing
- Specification and data being collected to provide qualitative numbers (e.g connectors specifications, theoretical analysis of crosstalk)
