

The Effect of DCD at 10G

Steve Krooswyk

Prakash R

Assumptions

3% and 5% DCD is modeled as Bi-Modal TX Jitter. It is the only jitter included in this simulation.

Joint Equalization for FFE and DFE is designed using DFE Script

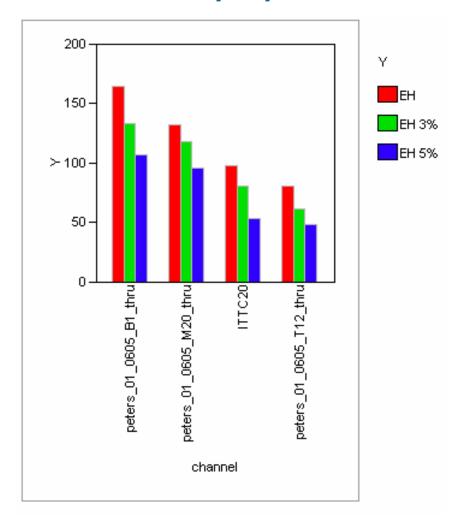

FFE is modeled at the transmitter instead of the receiver

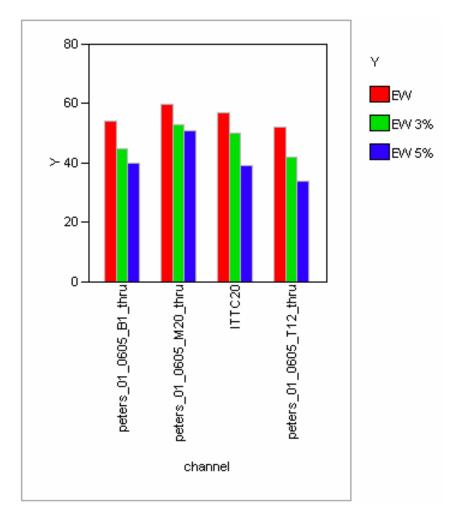

There is no crosstalk included in this simulation

3 tap FFE and 5 tap DFE

Results 0, 3, and 5% DCD

Pulse Responses
