

Replace function *confirmDiscovery(data)* in subclause 93.3.5.3 with the following block of text:

`confirmDiscovery(data)`

This function is used to check whether the current Discovery Window is open for the given ONU (TRUE) or not (FALSE), operating in the following way:

```
confirmDiscovery(data)
{
    Discovery1G ← data[5]
    Discovery10G ← data[6]
    if ((tqSize = 0x02) * (Discovery1G = 1))
        return TRUE
    if ((tqSize = 0x14) * (Discovery10G = 1))
        return TRUE
    return FALSE
}
```
