

# Channel Operating Margin Program Usage

Richard Mellitz  
Intel Corporation  
IEEE802.3bj Geneva Interim  
September 2012

# Operation

- Running com2l
  - Interactive file input (Q/A)
    - Spreadsheet selection windows
    - File selection windows
  - Scriptable single line entry
- Spreadsheet (XLS file) configures parameters
- Output
  - Display to MatLab® window
  - Frequency plots to floating window
  - Floating progress windows
- The COM2L runs in MatLab® version 7
- First step – check/edit configuration spreadsheet
- Next step – run com2l in MatLab®

# Configuration Spreadsheet: Select Port Type

# Parameter list

	Draft parameter ref	Example Setting	
Coding/Port Type	Coding/Port Type	NRZ Clause 93 D1.1	selector for port type
Unit Interval (UI)	Unit Interval (UI)	3.87879E-11	unit interval in seconds
tx_ffe	tx_ffe	[.1 .4]	Transmitter equalizer, max pre and post cursor coefficient
ndfe	W	12	Victim single bit response exception window (in UI)
max_ctle	G_DC	12	Continuous time filter, max DC gain
a_thru	A_v	0.4	Transmitter differential peak output voltage for victim
a_fext	A_f	0.4	Transmitter differential peak output voltage for Far-end aggressor
a_next	A_n	0.6	Transmitter differential peak output voltage for Near-end aggressor
AG	1/(L-1)	1	related to number of levels, L (symbol gain)
specBER	SER_0	1.00E-12	Target uncorrected symbol error ratio
Allowance	COM_0	0	Minimum channel operating margin
G_s_noise	sigma_G	0.01	Normalized RMS Gaussian noise
g_dd_noise	A_DD	0.1	Normalized peak dual-Dirac noise
Na_rms	-	0	voltage sensitive RMS Gaussian noise
Samples Per UI	M	32	
Port Order	Port Order	[1 3 2 4]	for the 4 ports the first two listed are inputs and respective last two are outputs (RX)
G01	Gamma_01	0.01	Transmitter reflection coefficient DC value. Values < .01 disables
G02	Gamma_02	0.01	Receiver reflection coefficient DC value. Values < .01 disables
Fscale1	Fscale1	2	Transmitter reflection coefficient reference frequency scale. Value > 2 disables
Fscale2	Fscale2	2	Receiver reflection coefficient reference frequency scale. Value > 2 disables
ctle_step	-	1	Continuous time filter step size dB
tx_ffe_step	-	0.02	Transmitter equalizer, pre/post cursor coefficient step size
maxc1	-	1	max value for DFE1
maxcx	-	1	max in W region
f_v	f_v	0.55	Transmitter 3 dB bandwidth for victim. Set to > 2 to deactivate
f_f	f_f	0.55	Transmitter 3 dB bandwidth for Far-end aggressor. Set to > 2 to deactivate
f_n	f_n	1	Transmitter 3 dB bandwidth for Near-end aggressor. Set to > 2 to deactivate
f_r	f_r	0.75	Receiver 3dB bandwidth

# Operational Control

INCLUDE_CTLE	0 = do not include CTLE 1 = include CTLE. Will eventually be removed
INCLUDE_FILTER	0 = do not include TX/RX filters 1 = include TX/RX filters. Will eventually be removed
DEBUG	0 = do not print internal data; 1 = prints and graphs internal data. Will eventually be removed
DISPLAY_WINDOW	0 - do not display FD graphs 1 - display FD graphs (IL, ILD, ICR, RL, MDPST)
CSV_REPORT	0 - do not create CSV report file 1- create CSV report file in .\results directory
SAVE_RESP	0 - do no save channel time domian data 1 - save channel time domian data in mat file
GET_FD	0 - do not report frequency domain metrics 1 - report some frequency domain metrics
INC_PACKAGE	0 - do not use package models 1 – use proposal 1 for h21(f) (d1.1) 2 – use proposal 2 for h21(f) 3 – use proposal 3 for h21(f) 4 – use proposal 4 for h21(f)
USE_EXTERNAL_PARAM	set to 0 . Will eventually be removed
RESULT_DIR	Point to the results directory

# CSV and display outputs

Output Parameters	
channel_operating_margin_dB: (COM)	Figure of merit. Adjusted so that above zero passes and below fails
peak_interference_mV:	Peak interference on channel include chip and system noise. For a test type of channel, this would be the value for additive rx tolerance injected noise. Since this is peak value of interference, dividing by 7 may be the amount of rms noise from an AWGN generator. Peak interference is measure at the spec BER.
peak_channel_interference_mV:	The peak interference. contribution for residual ISI and crosstalk.
peak_ISI_mV:	The peak interference. contribution for residual ISI.
peak_MDXTK_interference_mV:	The peak interference. contribution for all crosstalk.
icn_mV:	If FD is selected this is the integrated crosstalk noise. Information about channel design may discerned from $7 * ICN - peak\_MDXTK\_interference$
peak_MDNEXT_interference_mV:	The peak interference contribution for all NEXT crosstalk.
peak_MDFEXT_interference_mV:	The peak interference contribution for all FEXT crosstalk.
available_signal_after_eq_mV:	Essentially the “zero-first-precursor” signal height after filtering and reference equalization
fit_loss_dB_at_Fnq:	If FD is selected this is the value of the fitted IL loss at Nyquist. Same as SCAT, IL_fit_atNq
IL_dB_at_Fnq:	If FD is selected this is the value of the IL loss at Nyquist.
ILD_RMS:	This may be useful for a quick evaluation of a channel. It is the RMS of the Insertion Loss Deviation in dB
file_names:	List of channel files

# Syntax

```
function [ output_args ] =com2l(coding, num_fext, num_next,  
pkg, varargin)
```

- output\_args is a structure with results
- coding is string containing the full path name of the configuration spreadsheet
- num\_fext is the number for fext s4p files
- num\_next is the number for next s4p files
- pkg should be equal to 1 and is set by the spreadsheet
- All the reset of the argument are strings containing the respective full path names of through, fext, and next files

## Result screen

```
output_args =
```

```
