Cl **00**   *SC* **0**   *P*   *L*   # i-15

Carlson, Steven   Marvell Semiconducto

Comment Type **TR**   *Comment Status* **A**

The draft is not aligned with the project objectives.

Support fast-startup operation using predetermined configurations which enables the time from power_on2 = FALSE to a state capable of transmitting and receiving valid data to be less than 100 ms.

Support optional operation with run-time configuration, that specifies a maximum allowable time from power_on2 = FALSE to a state capable of transmitting and receiving valid data.

There is no mention of the 100 msec. start-up requirement in the draft and no value is given for the "maximum allowable time." If a maximum allowable time is an objective, then it must be stated, incorporated into the PICs, and a test method developed.

SuggestedRemedy

Create a new subclause (not sure where) "Start-up Time", and provide the necessary information.

Response   *Response Status* **C**

ACCEPT IN PRINCIPLE.

Add the following to the end of 96.4.5 paragraph:
"In all cases, the time from power_on = FALSE, transitioning to power_on = TRUE, to link_status=OK shall be less than 100 ms."

 PICS needs to be updated accordingly.

Cl **00**   *SC* **0**   *P*   *L*   # i-14

Carlson, Steven   Marvell Semiconducto

Comment Type **TR**   *Comment Status* **A**

The draft doe not align with its objectives.
Support 100 Mb/s operation in automotive environments (e.g. EMC, temperature) over a single balanced twisted pair.
Do not preclude the ability to survive automotive fault conditions (e.g. shorts, over voltage, EMC,
ISO16750).

No reference is made to temperature or ISO16750 in the draft. There is some material on overvoltage, but it is not referenced to ISO16750.

SuggestedRemedy

Incorporate Clause 97.10 Environmental Specifications in P802.3bp D1.4. This will supply all the relevant references, and will align 100BASE-T1 and 1000BASE-T1.

Response   *Response Status* **C**

ACCEPT IN PRINCIPLE.

P802.3bp 1000BASE-T1 has suggested the text from Clause 97.10 should be used in Clause 96. The text from 97.10 will be copied into a new subclause in 96 and "1000BASE-T1" will be changed to "100BASE-T1".

Additionally add necessary normative references that are referenced in the added text.

Comment Type **E**   *Comment Status* **A**   *EZ*

This amendment to IEEE Std 802.3-201x defines type 100BASE-T1 PCS, type 100BASE-T1 PMA sublayer, and type 100BASE-T1 Medium Dependent Interface, used in 100BASE-T1 PHY. This specification provides fully functional and electrical specifications for the type 100BASE-T1 PHY. This specification also specifies the baseband medium used with 100BASE-T1.

SuggestedRemedy

This amendment to IEEE 802.3 Standard for Ethernet defines the 100BASE-T1 Physical Layer (PHY) specifications and management parameters for point-to-point full duplex 100 Mb/s operation over single twisted pair balanced cabling.

This specification provides fully functional and electrical specifications for the type 100BASE-T1 PHY. This specification also specifies the baseband medium used with 100BASE-T1.

Response   *Response Status* **C**

*** Comment submitted with the file 85554200003-Clause 22 changes.docx attached ***

The project needs changes to Clause 22 to be compatible with the base document. This is highlighted on P802.3/D3.0, page 45, line 40.

The statement that the MII is for PHYs of 10 Mb/s and above is clearly wrong. The MII is only specified for 10 Mb/s and 100 Mb/s, and the MII management interface is also only applicable to some of the 1000 Mb/s PHYs that have been specified. P802.3bw does not propose use of either the MII management interface nor the MII register set.

Examples of problematic text (P802.3/D3.0):

22.1.1, c) -- P802.3bw does not use these signals, only the MII data paths, so the management interface needs to be optional to claim use of the MII.

22.1.2 -- This subclause describes exposed interfaces, not a logical interface, where components are separable (e.g., use data paths but not management interface, electrical specifications do not apply to a logical interface.)

22.1.5 -- "to determine PHY capabilities for any supported speed of operation". This is not true for many Ethernet PHYs. Since P802.3bw is 100 Mb/s PHYs and it does not use MII capabilities for management, it has the greatest burden to make sure Clause 22 is corrected.

22.2.4, 3rd para. -- "All PHYs that provide an MII shall incorporate the basic register set. All PHYs that provide a GMII shall incorporate an extended basic register set consisting of the Control register (Register 0), Status register (Register 1), and Extended Status register (Register 15). The status and control functions defined here are considered basic and fundamental to 100 Mb/s and 1000 Mb/s PHYs. Registers 2 through 14 are part of the extended register set." P802.3bw is, I believe, the first 100 Mb/s PHY for which this is not true, so it has to be fixed.

22.8.3.5, MF45 and MF 59 -- "all PHYs". Not true of a P802.3bw PHY.

SuggestedRemedy

The attached file proposes changes to Clauses 22 to fix the text. A more comprehensive comment has been submitted on P802.3 (to also fix for Gigabit). If accepted, the PICS for Clause 22 will also need to be revised to provide optionality similar to that in Clause 35. The P802.3bw TF should take the lead in correction of the PICS whether the changes are done in P802 or P802.3bw.

The commenter points out a valid inconsistency between the P802.3bw draft and IEEE Std 802.3-2012. As the commenter pointed out, this problem exists for other active 802.3 amendment projects (P802.3bp & P802.3bv). The P802.3bw TF will work with P802.3 (802.3bx) to assure appropriate changes are made in the revision of Std 802.3.

This topic is being considered in P802.3bx under comment #i-89. Comment #i-89 was accepted as AIP in Maintenance comment resolution.

The MII TX_EN signal is shown crossing the PMA service interface to the PHY CONTROL
block yet the PMA Service Interface defined in 96.2.2, and illustrated in Figure 96-3, does
not support this. Further the PHY CONTROL state diagram does not use TX_EN, although
it does use tx_enable (see page 62, line 1).

SuggestedRemedy
[1] Remove the TX_EN connection to PHY CONTROL in Figure 96-2 and 96-14.
[2] If tx_enable is required by PHT CONTROL, updated the PMA Service Interface defined
in 96.2.2 to provide a primitive to signal tx_enable across the PMA Service Interface and
update in Figure 96-2 and 96-14 accordingly.

Response   *Response Status* **C**
ACCEPT IN PRINCIPLE.

1) In Figure 96-17, rename "tx_enable" to "TX_EN".

2) In 96.2.2, add the following to the list:
"PMA_TXEN.request (TX_EN)"

3) In Figure 96-3, add a connection from PCS to PMA, with label: "PMA_TXEN.request"

4) On page 37 line 26 (before 96.3), add the following sections:

96.2.11 PMA_TXEN.request
This primitive indicates the presence of data on MII for transmission.

96.2.11.1 Semantics of the primitive
PMA_TXEN.request (TX_EN)

The TX_EN parameter can take on one of two values of the form:
TRUE   The data transmission on MII is enabled.
FALSE   The data transmission on MII is not enabled.

96.2.11.2 When generated
PCS generates the PMA_TXEN.request messages continuously based on TX_EN signal
received from MII.

96.2.11.3 Effect of receipt
The effect of receipt of this primitive is specified in Figure 96–17.

The Technology Dependent Interface should be designated with a dashed line and a cross reference to Clause 28 where it is defined should be added.

SuggestedRemedy

[1] Add a dashed line to designate the Technology Dependent Interface.
[2] Change the text 'Technology Dependent Interface' to read 'Technology Dependent Interface (Clause 28)'.

Response   *Response Status* **C**

ACCEPT IN PRINCIPLE.

1) In Figure 96-2, remove the dashed line at top with "Technology Dependent Interface" text. Add a block label as "MANAGEMENT" at top. Connect the two lines link_control and link_status to the right side of this new "MANAGEMENT" block. From left hand-side, add two signal inputs to the "MANAGEMENT" block, called "MDIO" and "MDC". Generate an output signal from "MANAGEMENT" block and connect it to the existing "config" signal. Re-direct the output "config" signal of "PHY CONTROL" to be input to "PHY CONTROL". See modified figure in http://ieee802.org/3/bw/public/Chini_3bw_01_0515.pdf.

2) Delete subclause 96.2.1 and all children subclauses, and re-number other sub-clauses accordingly.

3) In Figure 96-3, remove the dashed line at top and "Technology Dependent Interface" text. Also, remove the three lines labeled PMA_LINK.request, PMA_LINK.indication, and PMA_CONFIG.indication and the text.

4) In Figure 96-14, follow the same modification as above for Figure 96-2.

5) On page 59 line 29, change
"FORCE mode is used to set link_control to ENABLE during the PHY initialization.Link Monitor operation, as shown in state diagram of Figure 96–18, shall be provided to support PHY Control."
to
"Link Monitor operation, as shown in state diagram of Figure 96–18, shall be provided to support PHY Control. FORCE mode is used to set link_control to ENABLE through MANAGEMENT during the PHY initialization."

6) On page 59 line 45, change
"link_control This variable is configured by management or set by default and is defined in 28.2.6.2. "
To
"link_control This variable is generated by MANAGEMENT or set by default."

7) on page 43 line 8, change
"config The config parameter set by PMA and passed to the PCS via the PMA_CON-

FIG.indication primitive."
To
"config The config parameter is set by MANAGEMENT and passed to the PMA and PCS."

8) On page 59 line 42, change
"config The PMA shall generate this variable continuously and pass it to the PCS via the PMA_CONFIG.indication primitive."
To
"config The config parameter is set by MANAGEMENT and passed to the PMA and PCS."

9) On page 32 line 39, remove PMA_CONFIG.indication (config) . Also remove sub-clause 96.2.4 and its children.

The definition of the notation, service and timer specification should be placed under their own subclause heading. In addition there is no statement that the state diagrams takes precedence over text.

SuggestedRemedy

[1] Add a new subclause 96.1.2 as follows:

96.1.2 'Conventions in this clause'.

The body of this clause contains state diagrams, including definitions of variables, constants, and functions. Should there be a discrepancy between a state diagram and descriptive text, the state diagram prevails.

[2] Renumber and rename existing subclause 96.1.2 'Notation' to be 96.1.2.1 'State Diagram Notation'.

[3] Renumber, reorder and rename existing subclause 96.1.3 'Service specification' to be '96.1.2.3 'Service specification'.

[4] Renumber, reorder and rename existing subclause 96.1.4 'Timer specification' to be '96.1.2.2 'State Diagram Timer specification'.

Law, David Hewlett-Packard Ltd

Comment Type **E** *Comment Status* **A**
According to figure 96-4 the 4B/3B conversion function is part of the PCS TRANSMIT since this has TXD<3:0>, tx_error_mii and tx_enable_mii as inputs. Since subclause 96.3.2.3 is the PCS Transmit subclause, suggest that the 4B/3B subclause 96.3.2.2, and its subclauses, should be moved under 96.3.2.3.

SuggestedRemedy
[1] Insert new heading 96.3.3 PCS Transmit to match block in Figure 96-4.
[2] Renumber 96.3.2.2 to 96.3.3.1 as the first subclause (function) of the PCS transmit.
[3] Renumber remaining subclauses.

Response *Response Status* **C**
ACCEPT IN PRINCIPLE.

Remove "96.3.2 PCS Transmit".

Change "96.3.2.1" to "96.3.2"

Insert "96.3.3 PCS Transmit" before "96.3.2.2 4B/3B conversion"

Renumber as necessary.

Comment Type **TR**   *Comment Status* **A**

The variable 'mii_fc_err' is set TRUE in the 'BAD SSD' state of the 'PCS Receive state diagram', set FALSE elsewhere, but is never used. Further, a false carrier error is already correctly signalled across the MII through the use of 'pcs_rx_er = TRUE' and 'pcs_rx_dv = FALSE' in the 'BAD SSD' state.

SuggestedRemedy

Delete the 'mii_fc_err' variable and remove from the 'BAD SSD' and 'IDLE' states of the 'PCS Receive state diagram'.

Response   *Response Status* **C**

ACCEPT IN PRINCIPLE.

Add a new paragraph at the end of 96.3.3.5 read as follows,
"If the BAD SSD state occurred in Figure 96-10a PCS Receive state diagram, the false carrier error should be indicated on the MII after conversion."

Cl **96**   *SC* **96.3.3.1**   *P* **50**   *L* **3**   # i-25

Law, David   Hewlett-Packard Ltd

Comment Type **TR**   *Comment Status* **A**

The variable 'JBstate' is generated based on the JAB state diagram state and its only use is to control the Receive state diagram, forcing it back to the IDLE state is 'JBstate = JAB'. The variable rcv_jab_detected is generated by the JAB state diagram, it is TRUE in the JAB state, and false in all other states. It is therefore equivalent to 'JBstate = JAB', however the variable is never used.

I suggest that it is clearer to use a variable set in the JAB state diagram to control the Receive state diagram, rather than variable that is generated in text.

SuggestedRemedy

Delete the 'JBstate' variable definition. Change 'JBstate = JAB' on the open arrow to the IDLE state in the Receive state diagram to read 'rcv_jab_detected = TRUE'.

   Subclause 96.1.4 'Timer specification' states that 'All timers operate in the manner
   described in 40.4.5.2.'. Based on this there is no definition for what assigning a timer with
   the value zero will have, and regardless, the state diagram only ever tests the value of
   rcv_max_timer_done.

   Further, the rcv_max timer is started in the 'MONJAB' state, the action 'start
   rcv_max_timer', so as defined by 40.4.5.2 through its reference to 14.2.3.2, the variable
   rcv_max_timer_done is set to FALSE at that point. Based on this I don't see the need for
   the action 'rcv_max_timer <= 0' in the state 'JABIDLE'.

SuggestedRemedy
   Delete the action 'rcv_max_timer <= 0' in the state 'JABIDLE'.

   The text states that 'The symbol conversion is as specified in 96.3.3.1.'. Is this the correct
   cross-reference, subclause 96.3.3.1 is the 'PCS Receive overview' whereas subclause
   96.3.3.2 is the 'PCS Receive symbol decoding'.

SuggestedRemedy
   Change the cross-reference from 96.3.3.1 to 96.3.3.2. Alternatively delete this sentence as
   it doesn't seem particularly relevant to the definition of this timer.

Response   *Response Status* **C**
   ACCEPT IN PRINCIPLE.

   Remove "The symbol conversion is as specified in 96.3.3.1."

Comment Type **TR**   *Comment Status* **A**

Subclause 96.3.3.1.4 'Messages' defines 'PUDI' however this is never used. Further there is no clear description that I can find of now the 'rx_symb_vector' ternary symbols supplied by the PMA_UNITDATA.indication primitive from the PMA are mapped to rx_symb_pair other than a mention on de-interleaving rx_symb_vectors in the check_idle function defined in subclause 96.3.3.1.2 'Functions' and a statement that 'received symbols are converted to a 2-D ternary pair (RAn, RBn) first' in subclause 96.3.3.2 'PCS Receive symbol decoding'.

SuggestedRemedy

[1] Update the description in subclause 96.3.3.2 'PCS Receive symbol decoding' to use the variables rx_symb_vector and rx_symb_pair.

[2] Remove subclause 96.3.3.1.4 'Messages' and it definition of 'PUDI' as it is not used by the state diagrams. Alternatively, provide a state diagram that uses PUDI and describes how the rx_symb_vector received in the message PUDI is mapped to rx_symb_pair which is used by the DECODE function of the state diagram.

[3] Suggest a diagram similar to 96-8 'PCS transmit symbol mapping' be provided for the PCS receive symbol mapping.

Response   *Response Status* **C**

ACCEPT IN PRINCIPLE.

Remedy#1: In 96.3.3.2, on page 53 line 48, change "The receiver implementation de-interleaves the sequences accordingly."
to
"The receiver de-interleaves the sequences of rx_symb_vector to rx_symb_pair accordingly."

In 96.3.3.2, on page 53 line 51, change
"The received symbols are converted to a 2-D ternary pair (RAn, RBn) first."
to
"The received symbols, rx_symb_vector, are de-interleaved to generate rx_symb_pair (RAn, RBn)."

Remedy#2: Accept to remove subclause 96.3.3.1.4 'Messages' and its definition of 'PUDI' .
Remedy#3: The interleaving process is explained in the transmit section, see Figure 96-8. The de-interleaving of the 2-D ternary pair (RAn, RBn) or (RBn, RAn) is a function of the receiver, and it is left to implementors.

Additionally, a diagram as described by commenters suggested remedy [3] will be added.

Law, David   Hewlett-Packard Ltd

Comment Type **T**   *Comment Status* **A**

Subclause 96.3.3.2 'PCS Receive symbol decoding' states that 'The received ternary pairs (RAn, RBn) are decoded to generate signals rx_data<2:0>, rx_dv, and rx_error.' and that ' These signals are processed through 3B/4B conversion to generate signals RXD<3:0>, RX_DV and RX_ER at the MII'. Is this correct as Figure 96-10 'PCS Receive state diagram' generates pcs_rx_er, pcs_rx_dv and rx_data<2:0> and isn't it these that are converted by the 3B/4B conversion.

SuggestedRemedy

Suggest that the text
'... generate signals rx_data<2:0>, rx_dv, and rx_error.'

Should be changed to read
'... generate signals rx_data<2:0>, pcs_rx_dv, and pcs_rx_error.'.

This text reads 'This function shall conform to 40.4.2.1 without any exceptions, noting that the 36.2.5.1.3 reference is valid and the optional LPI reference is not used.' I don't see the point of stating that 'the 36.2.5.1.3 reference is valid' since it is already stated that subclause 40.4.2.1 will be followed without any exceptions. Further, on examination of 40.4.2.1 I don't see any reference to 'optional LPI'. The definition of power_on in subclause 36.2.5.1.3 does mention the low power mode bit (0.11) in the Clause 22 MII Control register, but this is not related to LPI. Instead this is a Power down bit which places the PHY in a mode whereby it is only required to respond to management transactions (see IEEE Std 802.3-2012 subclause 22.2.4.1.5). Since 100BASE-T1 is supporting Clause 45 registers this bit will not be supported.

SuggestedRemedy

Change the text 'This function shall conform to 40.4.2.1 without any exceptions, noting that the 36.2.5.1.3 reference is valid and the optional LPI reference is not used.' to read 'This function shall conform to 40.4.2.1.'.

Response   *Response Status* **C**

ACCEPT IN PRINCIPLE.

In 96.4.1 change:
 "This function shall conform to 40.4.2.1 without any exceptions, noting that the 36.2.5.1.3 reference is valid and the optional LPI reference is not used."
 to
 "This function shall conform to 40.4.2.1. The optional low power mode referenced in 36.2.5.1.3 is not supported."

Comment Type **T**   *Comment Status* **A**

The text reads 'PHY Control config sets tx_mode to ...'. config and tx_mode are two separate variables, see subclause 96.4.7.1 for their definitions. I believe this text should read 'PHY Control sets tx_mode to ...' as it is tx_mode that can take the values SEND_N, SEND_I and SEND_Z described, not config. Based on this Figure 96-14 and 96-25 both need updated to show the connection of tx_mode to the PMA TRANSMIT block.

SuggestedRemedy

[1] Change the text 'PHY Control config sets tx_mode to ...' to read 'PHY Control sets tx_mode to ...'.

[2] In Figure 96-14 add a connection of tx_mode to the PMA TRANSMIT block.

[3] In Figure 96-15 add a input arrow labled tx_mode.

Response   *Response Status* **C**

ACCEPT.

Accept remedy#1.
 On page 58, line 15, move "PHY Control sets tx_mode to SEND_N (transmission of normal MII Data Stream, Control Information,
 or idle), SEND_I (transmission of IDLE code-groups), or SEND_Z (transmission of zero code-groups). "
 to the end of 96.4.4.

Additionally, accept commenter's [2] and [3] suggested remedies.

The text reads 'When PMA_CONFIG indicates MASTER mode then the PMA Transmit
Function derives the TX_TCLK from a local clock source. When
PMA_CONFIG indicates SLAVE mode ...'. It is the parameter config contained in the
primitive PMA_CONFIG that can take the vales MASTER or SLAVE.

SuggestedRemedy

Suggest that text
'When PMA_CONFIG indicates MASTER mode then the PMA Transmit Function derives
the TX_TCLK from a local clock source. When
PMA_CONFIG indicates SLAVE mode ...'

be changed to read

'When the config parameter in the PMA_CONFIG primitive indicates MASTER mode, the
PMA Transmit Function derives the TX_TCLK from a local clock source. When the config
parameter in the PMA_CONFIG primitive indicates SLAVE mode ...'.

Response   *Response Status* **C**
ACCEPT IN PRINCIPLE.

Change text to
"'When the config parameter is set to MASTER, the PMA Transmit Function derives the
TX_TCLK from a local clock source. When the config parameter is set to SLAVE, the PMA
Transmit Function derives the TX_TCLK from the
recovered clock.'"

Thompson, Geoffrey   INDEPENDENT

Comment Type   **T**   *Comment Status*   **A**

In 802.3, management is optional (see quotation from 30.1, Management Overview,
below), and the way of doing management registers and the management interface are
also optional (see quotations from 80.2.7 Management interface (MDIO/MDC) and Clause
55, 10GBASE-T, below). This is desirable: some small or highly integrated products won't
have an exposed MDIO interface, and some (e.g. SFP+ modules) use a different memory
map and interface that provides an equivalent function to Clause 45, and can be converted
by another part of the system.
This sentence "100BASE-T1 shall use the management interface as specified in Clause 45
and the PHY-Initialization which is described in the following section." joins two separate
requirements with one "shall" (also it lacks a PICS). The first one, "shall use the
management interface as specified in Clause 45" was a response to D1.2 comment 91
which asked "is the management interface normative or optional?" The text needs to be
changed to show that Clause 45 is optional. Also, the "shall be configured" in 96.6.1 won't
work, because shalls in this clause apply to just the PHY, and something else would do the
configuring.
Editorials: it's the following two sections, and they should be called subclause or explicitly
identified. PHY-initialization, MASTER-SLAVE configuration and MASTER-SLAVE
assignment are the same thing, so must be identified by the same name.
Rogue capital in "PHY-Initialization", line 28.

From 30.1 Overview
In CSMA/CD no peer management facilities are necessary for initiating or terminating
normal protocol operations or for handling abnormal protocol conditions. Since these
activities are subsumed by the normal operation of the protocol, they are not considered to
be a function of Layer Management and are, therefore, not discussed in this clause.
Implementation of part or all of Layer Management is not a requirement for conformance to
any other clause of this standard.

80.2.7 Management interface (MDIO/MDC)
The optional MDIO/MDC management interface (Clause 45) provides an interconnection
between MDIO Manageable Devices (MMDs) and Station Management (STA) entities.

55.3.7 PCS management
The following objects apply to PCS management. If an MDIO Interface is provided (see
Clause 45), they are accessed via that interface. If not, it is recommended that an
equivalent access be provided.

55.5.2 Test modes
The test modes described below shall be provided to allow for testing of the transmitter
waveform, transmitter distortion, transmitted jitter, transmitter droop and BER testing.
For a PHY with an MDIO management interface, these modes shall be enabled by setting
bits...

55.6 Management interfaces
10GBASE-T makes extensive use of the management functions that may be provided by

Cl **96**
SC **96.6**

Page 19 of 20
5/21/2015 12:12:42 PM

the MDIO (Clause 45)...

SuggestedRemedy

Change 96.6, 96.6.1 and 96.6.2 to:
96.6 MASTER-SLAVE assignment
100BASE-T1 uses MASTER-SLAVE assignment. A method for configuring a PHY as
MASTER or SLAVE shall be provided. The optional MDIO/MDC management interface
(Clause 45) may be used; if not, it is recommended that an equivalent access be provided.
MASTER-SLAVE assignment for each link configuration is necessary for establishing the
timing control of each PHY. In 100BASE-T1, one PHY is configured as MASTER and one
PHY is configured as SLAVE to operate. In case both PHYs are configured to be MASTER
or SLAVE, operation is undefined.
[Then, text as in present 96.6.2 PHY-initialization]

Add PICS for "A method for configuring a PHY as MASTER or SLAVE shall be provided."

Response   *Response Status*   **C**

ACCEPT IN PRINCIPLE.

All register additons in Clause 45 shall have PICS in the manner customary for Clause 45.
