The cross reference to subclause 96.3.2.4.5 in respect to the ESD seems to be incorrect as I can't find subclause 96.3.2.4.5. Potential references could be 96.3.3.2 'PCS Transmit state diagram' and 96.3.3.3.5 'Generation of ternary pair (TAn, TBn)', however in both cases the ESD is described in terms of symbols rather than code-groups, and I note the definition states '... the SSD consists of three code-groups ...'. A better subclause therefore may be 96.3.3.2.1 'Variables' as it defines the three ESD code-groups.

*SuggestedRemedy*
Suggest 96.3.2.4.5 should read either 96.3.3.2 or 96.3.3.2.1.

*Response*                    *Response Status* **C**

This contains a "shall" statement. A Clause 45 PICS entry is needed.
45.2.1.131.2 100BASEBASE-T1 MASTER/SLAVE config value (1.2100.14)
Bit 1.2100.14 is used to select MASTER or SLAVE operation if MASTER-SLAVE manual config enable bit 1.2100.15 is set to one. If bit 1.2100.14 is set to one the PHY shall operate as MASTER. If bit 1.2100.14 is set to zero the PHY shall operate as SLAVE.

*SuggestedRemedy*

Add a PICS entry for Clause 45 for 45.2.1.131.2.

*Response*     *Response Status* **C**

ACCEPT IN PRINCIPLE.

Theres actually 3 "shalls" added to 45 via the bw draft (1 in 45.2.1.14b & 2 in 45.2.131.2).

Add proper instructions for modifying the Clause 45 PICS with the following statements.

[1]
Feature: BASE-T1 PMA/PMD extended ability register
Subclause: 45.2.1.14a
Value/comment: All bits are read only, writes have no effect
Status: M
Support: Yes [ ]

Note: D3.1 text uses 45.2.1.14b but comment r01-2 changes it to 45.2.1.14a

[2]
Feature: BASE-T1 MASTER config
Subclause: 45.2.1.131.2
Value/comment: PHY operates as MASTER when bit 1.2100.14 is set to one
Status: M
Support: Yes [ ]

[3]
Feature: BASE-T1 SLAVE config
Subclause: 45.2.1.131.2
Value/comment: PHY operates as SLAVE when bit 1.2100.14 is set to zero
Status: M
Support: Yes [ ]

[4] Insert text from Tu_3bw_01_0715.pdf, per instructions.

Law, David     Hewlett-Packard Ltd

*Comment Type* **T**     *Comment Status* **A**

I acknowledge that this comment is out of scope on this recirculation as it is on unchanged text, however the introduction should also state how the optional management registers are accesses, in particular since it is not through the Clause 22 management interface.

*SuggestedRemedy*

The 100BASE-T1 Physical Layer supports standard media access controller (MAC) interfaces via the MII defined in Clause 22 with the exception of the MII Management interface defined 22.2.4. The 100BASE-T1 management functions are optionally accessible through the management interface defined in Clause 45.

*Response*     *Response Status* **C**

ACCEPT IN PRINCIPLE.

[1] Use text as provided by commenter.

[2] Update the Subclause fielf of *MD in 96.11.3 to be 96.1.

[3] Update other PICS as necessary

In Figure 96-2, the righhand stack is labeled "LAN CSMA/CD LAYERS". Does 100BASE-T1 support half-duplex mode? If not, then CSMA/CD is not appropriate.

*SuggestedRemedy*

Since IEEE 802.3 is the "Standard for Ethernet", this discrepancy was resolved in the revision by labeling the stack as "ETHERNET LAYERS". Change the diagram accordingly.

*Response*               *Response Status*  **C**

ACCEPT IN PRINCIPLE.

Change "LAN CSMA/CD LAYERS" to "ETHERNET LAYERS"

---

*Cl* **96**     *SC* **96.1.1**        *P* **31**     *L* **40**       # r01-50

Law, David                            Hewlett-Packard Ltd

*Comment Type*  **T**      *Comment Status*  **A**                                    *EZ*

I acknowledge that this comment is out of scope on this recirculation as it is on unchanged text, however in the first two paragraphs of this subclause, there different descriptions of the twisted-pair cabling supported by 100BASE-T1, 100BASE-TX and 1000BASE-T are used.

In respect to 100BASE-T1 the cabling is described as 'single balanced twisted-pair', in the case of 100BASE-TX the cabling is described as 'two pairs of a channel comprising unshielded copper cabling or better', in the case of 1000BASE-T the cabling is described as '4-pair balanced cabling system compliant with 40.7'.

Subclause 25.1 'Overview' of IEEE Std 802.3 states 'This clause specifies the 100BASE-X PMD (including MDI) and baseband medium for twisted-pair wiring, 100BASE-TX.' Based on this I'd suggest that a better description for 100BASE-TX would simply be 'two pairs of balanced twisted-pair'.

Subclause 40.1 'Overview' of IEEE Std 802.3 states ' The 1000BASE-T Physical Coding Sublayer (PCS), Physical Medium Attachment (PMA) and baseband medium specifications are intended for users who want 1000 Mb/s performance over Category 5 balanced twisted-pair cabling systems.'. Based on this I'd suggest a better description for 1000BASE-T would be 'four pairs of balanced twisted-pair'.

I also both paragraphs state that 100BASE-T1 operates over a single balanced twisted-pair channel which seems to be repetitively redundant.

*SuggestedRemedy*

Suggest the first two paragraphs be replaced with 'The 100BASE-T1 PHY operates using full-duplex communications (using echo cancellation) over a single balanced twisted-pair. In contrast, the IEEE 802.3 100BASE-TX PHY, specified in Clause 25, operates on two pairs of balanced twisted-pair cabling. Like the 100BASE-TX PHY, this PHY uses ternary signaling and interfaces to the Clause 22 MII. The 1000BASE-T PHY is specified in Clause 40, and it operates over four pairs of balanced twisted-pair cabling.'.

*Response*               *Response Status*  **C**

ACCEPT.

Law, David  　　　　　　Hewlett-Packard Ltd

*Comment Type*  **TR**  　　*Comment Status*  **A**

The PMA_LINK.indication primitive has been deleted from the PMA service interface based on the alternative response to comment i-56 generated by the IEEE P802.3bw Task Force while meeting in May. While this makes sense from the point of view of getting rid of the Technology Dependant Interface, this primitive is also used to pass link_status to the PCS as stated in subclause 96.3.3.1 'Variables' which reads 'The link_status parameter set by PMA Link Monitor and passed to the PCS via the PMA_LINK.indication primitive.'. Based on this the PMA_LINK.indication primitive needs to be added to the PMA service

*SuggestedRemedy*

[1] In Figure 96-2 '100BASE-T1 PHY interfaces' add the primitive 'PMA_LINK.indication' between the PMA and the PCS with the arrow pointing in the direction of the PCS.

[2] In subclause 96.2.2 'PMA service interface' add 'PMA_LINK.indication  (link_status)' to the list of service primitives.

[3] Add the following definition of the PMA_LINK.indication as a subclauses of subclause 96.2.2 'PMA service interface':

96.2.2.x PMA_LINK.indication

This primitive is generated by the PMA to indicate the status of the underlying medium as specified in 96.4.5. This primitive informs the PCS about the status of the underlying link.

96.2.2.x.1 Semantics of the primitive

PMA_LINK.indication (link_status)

The link_status parameter can take on one of two values: FAIL or OK.
FAIL   No valid link established.
OK    The Link Monitor function indicates that a valid 100BASE-T1 link is established.
       Reliable reception of signals transmitted from the remote PHY is possible.

96.2.2.x.2 When generated

The PMA generates this primitive continuously to indicate the value of link_status in compliance with the state diagram given in 96.4.5.

96.2.2.x.3 Effect of receipt

The effect of receipt of this primitive is specified in 96.4.5.

*Response*  　　　　　*Response Status*  **C**

ACCEPT IN PRINCIPLE.

[1] In Figure 96-2 '100BASE-T1 PHY interfaces' add the primitive 'PMA_LINK.indication'

TYPE: TR/technical required  ER/editorial required  GR/general required  T/technical  E/editorial  G/general  　　*Cl* **96**  　　Page 12 of 18

*Comment Type*   **T**        *Comment Status*   **A**

In response to comment i-56, item 9 removed the primitive PMA_CONFIG.indication (config) and instead config was supplied by management. Suggest that Figures 96-6, 96-8 and 96-24 should be updated to reflect this.

*SuggestedRemedy*

In Figure 96-6 make the following changes:
[1] Delete the line labelled 'config' that crosses the boundary marked 'PMA SERVICE INTERFACE' between the two points where it connects to two other lines.
[2] Add a short line vertical line starting from the 'MANAGEMENT' box, this should be aligned with the dotted lined marked 'PMA SERVICE INTERFACE'.
[3] Add a horizontal line connected the line added in [2].
[4] Add vertical lines at each end of the line added in [3] to connected with the config line on the PCS side and PMA side.
[5] Add the label 'config' back to the figure.

In Figure 96-8 make the following changes:
[1] Delete the line labelled 'config' from the join to 'PMA SERVICE INTERFACE' boundary.
[2] Add a box at the top marked 'MANAGEMENT' with MDIO and MDC connections (see Figure 96-24 fo rexample).
[2] Add a vertical line from management box to exiting 'config' to signify 'config' being sourced from management.
[3] Add the label 'config' back to the figure.

In Figure 96-24 make the following changes:
[1] Delete the line labelled 'config' from the join to 'PMA SERVICE INTERFACE' boundary.
[2] Add the label 'config' back to the figure.

*Response*                    *Response Status*   **C**

ACCEPT IN PRINCIPLE.

In Figure 96-3 make the following changes:
[1] Delete the line labelled 'config' that crosses the boundary marked 'PMA SERVICE INTERFACE' between the two points where it connects to two other lines.
[2] Add a short line vertical line starting from the 'MANAGEMENT' box, this should be aligned with the dotted lined marked 'PMA SERVICE INTERFACE'.
[3] Add a horizontal line connected the line added in [2].
[4] Add vertical lines at each end of the line added in [3] to connected with the config line on the PCS side and PMA side.
[5] Add the label 'config' back to the figure.

In Figure 96-4 make the following changes:
[1] Delete the line labelled 'config' from the join to 'PMA SERVICE INTERFACE' boundary.
[2] Add a box at the top marked 'MANAGEMENT' with MDIO and MDC connections (see Figure 96-24 fo rexample).
[2] Add a vertical line from management box to existing 'config' to signify 'config' being

I acknowledge that this comment is out of scope on this recirculation as it is on unchanged text, however sucbaluse 96.6 'Management interface' states that '100BASE-T1 shall use the management interface as specified in Clause 45 and the PHY-Initialization which is described in the following section.'. It doesn't seem correct to mandate an embedded implementation to use the Clause 45 interface.

*SuggestedRemedy*

Suggest the first paragraph be replaced with '100BASE-T1 uses the management interface as specified in Clause 45. The Clause 45 MDIO electrical interface is optional. Where no physical embodiment of the MDIO exists, provision of an equivalent mechanism to access the registers is recommended.'.

Suggest the sentence 'The 100BASE-T1 PHY is designed to operate in the automotive environment' be moved to be a sentence under the subclause heading 96.9 'Environmental Specifications' as this statement is applicable to the whole of this section, this would also allow this to be used as the reference for the 'AUTO' major capability/option which currently has none.

*SuggestedRemedy*

[1] Move the text 'The 100BASE-T1 PHY is designed to operate in the automotive environment' from subclause 96.9.2.1 'Environmental Safety' to be the text for subclause 96.9 'Environmental Specifications'.

[2] In the Subclause field of the PICS item 'AUTO' add '96.9.

*Response*                  *Response Status*   **C**

ACCEPT IN PRINCIPLE.

[1]
Just delete "The 100BASE-T1 PHY is designed to operate in the automotive environment."

[2]
For all 5 "shall" statements in the 96.9 subclauses, use "96.9" as the subclause reference in the PICS table.

*Comment Type*  **TR**    *Comment Status*  **A**

Subclause 96.9.2.2 'Electromagnetic Compatibility' seems to be duplicative, but also contradictory, to subclause 96.5.1 'EMC tests'.

Subclause 96.9.2.2 'Electromagnetic Compatibility' states that 'A system integrating the 100BASE-T1 PHY shall comply with all applicable local and national codes, or as agreed to between the customer and the supplier, for the limitation of electromagnetic interference.' Subclause 96.5.1 'EMC tests' also states 'A system integrating the 100BASE-T1 PHY shall comply with applicable local and national codes.' however states 'In addition, the system may need to comply with more stringent requirements as agreed upon between customer and supplier, for the limitation of electromagnetic interference.'

Hence subclause 96.9.2.2 seems to permit the use of an alternative to applicable local and national codes if it is agreed between the customer and supplier yet subclause 96.5.1 doesn't, only noting that in addition more stringent requirements may be agreed between the customer and supplier. Further, Subclause 96.9.2.2 requires conformance to IEC CISPR 25, while subclause 96.5.1 seems to just note the existence of IEC CISPR 25.

*SuggestedRemedy*

Suggest that subclause 96.5.1 be merged in to subclause 96.9.2.2 as follows.

[1] In subclause 96.9.2.2 change ' A system integrating the 100BASE-T1 PHY shall comply with all applicable local and national codes, or as agreed to between the customer and the supplier, for the limitation of electromagnetic interference.' to read 'A system integrating the 100BASE-T1 PHY shall comply with applicable local and national codes. In addition, the system may need to comply with more stringent requirements as agreed upon between customer and supplier, for the limitation of electromagnetic interference.'.

[2] Delete subclause 96.5.1.

[3] Delete PICS item PME1.

[4] Ensure that PICS item ES4 is aligned to this new text since this change would overcome my other comment on ES4.

*Response*                    *Response Status*  **C**

*Comment Type*    **TR**        *Comment Status*    **A**

Subclause 96.9.2.2 'Electromagnetic Compatibility' states that 'A 100BASE-T1 PHY shall be tested according to IEC CISPR 25 test methods defined to measure the PHY's EMC performance in terms of RF immunity and RF emissions.'. The following sentence in this subclause then states that 'When used in an automotive environment, a 100BASE-T1 PHY shall meet the following motor vehicle EMC requirements:' and then lists IEC CISPR 25 in item (a).

This seems to state that all 100BASE-T1 PHYs have to be tested using the IEC CISPR 25 test methods, but only 100BASE-T1 PHYs that are used in an automotive environment need to meet the limits of IEC CISPR 25, with no indication of any limits for non-automotive applications.

Further, since IEC CISPR 25 is 'Vehicles, boats and internal combustion engines - Radio disturbance characteristics - Limits and methods of measurement for the protection of on-board receivers.' I don't think a requirement to be tested according to IEC CISPR 25 should be placed on all 100BASE-T applications, only where it is being used in an automotive application.

*SuggestedRemedy*

[1] Suggest the sentence 'A 100BASE-T1 PHY shall be tested according to IEC CISPR 25 test methods defined to measure the PHY's EMC performance in terms of RF immunity and RF emissions.' be deleted as the following sentence mandates meeting the requirements of IEC CISPR 25 which will include the test methods.

[2] Delete item ES5 from the PICS.
