rho_x	0.44		ERL1 and ERL2 are the ERL into each side of a test poit.
fixture delay time	0.00E+00		set to zero for no fixture. For a CR cable this is determined outside of this program (T_{fx})
Grr_limit	0		If 0 limit= px(1+px) as limit in 8023cd-anx93A-ERL-proposal If 1 limit = 1 as limit as in mellitz_cd_01a_011
ERL_FOM	0		If 0 use variance as in 8023cd-anx93A-ERL-proposal If 1 use complete CDF as in mellitz_cd_01a_011

- ERL is set to 1 and ERL_ONLY set to 1
- We're considering one through channel here (s4p)
- Crosstalk channels will be ignored
- If Include PCB = 1
 - The ERL will not use the PCB
