

# **COM V1.65 for Package and C2M Exploration**

***Richard Mellitz, Samtec***

***November 23, 2016***

# COM V1.65

- ❑ For development of 50Gb/s per lane PAM-4
- ❑ Not fully vetted against old versions.
  - So far seems, to yield the same answers
  - Volunteers, feedback, and debug suggestions welcome
- ❑ Added capability to adapt transmitter and package base on impedance channel.
- ❑ Added TDR reporting for diagnosis
- ❑ Added feature to aid C2M standards development.
  - CTLE for eq. 120D-2
  - Voltage eye height reporting
  - Mate test fixture testing

# Choosing package as function of driving point impedance

- Suggested in:
  - [http://www.ieee802.org/3/cd/public/Nov16/mellitz\\_3cd\\_01\\_1116.pdf](http://www.ieee802.org/3/cd/public/Nov16/mellitz_3cd_01_1116.pdf)
- COM V1.65 implements this
- Zc is chosen based on drive point impedance
- Specified in the COM configuration file with:

New 'cd exploratory		
TDR	1	logical
WC_PORTZ	1	logical

Table 93A-3 parameters		
Parameter	Setting	Units
package_tl_gamma0_a1_a2	[0 1.734e-3 1.455e-4]	
package_tl_tau	6.141E-03	ns/mm
package_Z_c	[90 110]	Ohm

- Termination resistance Rd, A\_v, A\_f, A\_n, and SNR\_TX are also selected along with Zc

R_d	[55 55]	Ohm	[TX RX] or selected
A_v	[0.45 42]	V	tdr selected
A_fe	[0.45 42]	V	tdr selected
A_ne	[.64 .64]	V	tdr selected
SNR_TX	[32.5 32.51]	dB	tdr selected

# Additions for C2M standards development

$$H(f) = \frac{GP_1P_2P_{LF}}{Z_1Z_{LF}} \times \frac{j2\pi f + Z_1}{(j2\pi f + P_1)(j2\pi f + P_2)} \times \frac{j2\pi f + Z_{LF}}{j2\pi f + P_{LF}}$$

(120E-2)  
[presented in mellitz 3bs 02a 1116.pdf](#)

## □ Suggested configuration file to test mated test fixtures

## **Additional Information**

Keyword description

V1.65

# Summary of new keywords for TDR

	<b>Value</b>	<b>actions</b>	<b>Comments</b>
TDR	0 or 1	1 = perform TDR	If missing or 0, ignore and perform like V1.63
WC_PORTZ	0 or 1	1 – find worse case port parameters based on TDR for Tx and Rx ports. Must have TDR=1 to be active	If missing or 0, ignore and perform like V1.63
A_v	[ val1 val2] or val1	Used of TDR and WC_PORTZ is = 1 use port impedance to determine which value to use else just used val1	
A_fe			
A_ne			
SNR_TX			
package_Z_c			
R_d			Only used for through channel to compute gammas.

# Summary of CLTE keywords

Keyword	Value	actions
PHY_type	C2M, C2C	Changes pass fail report from COM to Vertical Eye Height if C2M. If C2C missing COM is used
EH_min	Millivolts	Minimum EH threshold when C2M is set
EH_max	Millivolts	Maximum EH threshold when C2M is set
g_DC_HP	gain values or missing	If 1. Use CTLE from P802.3bs Annex 93A if missing and f_HP_P and f_HP_Z is missing use original CL93 CTLE
f_HP_PZ	Pole/Zero in GHz or list corresponding g_DC_HP values	f_HP_P and f_HP_Z must not be used with this
f_HP_P	Pole/Zero in GHz or list corresponding g_DC values	When g_DC_HP is missing but these are defined use equation 120E-2
f_HP_Z		
g_DC	gain values	
f_z	Pole/Zero in GHz or list corresponding g_DC values	When g_DC_HP is missing but f_HP_P and f_HP_Z are defined, CTLE uses equation 120E-2
f_p1		
f_p2
