

# Task Force status and plan

Yan Zhuang  
Huawei Technologies

2017 April 10<sup>th</sup> Ad hoc call

# Work in March Interim meeting

- Adopted baseline texts for Ethernet interface modules
- Adopted baseline texts for PSE module
- Generated D0.1 for Task Force review

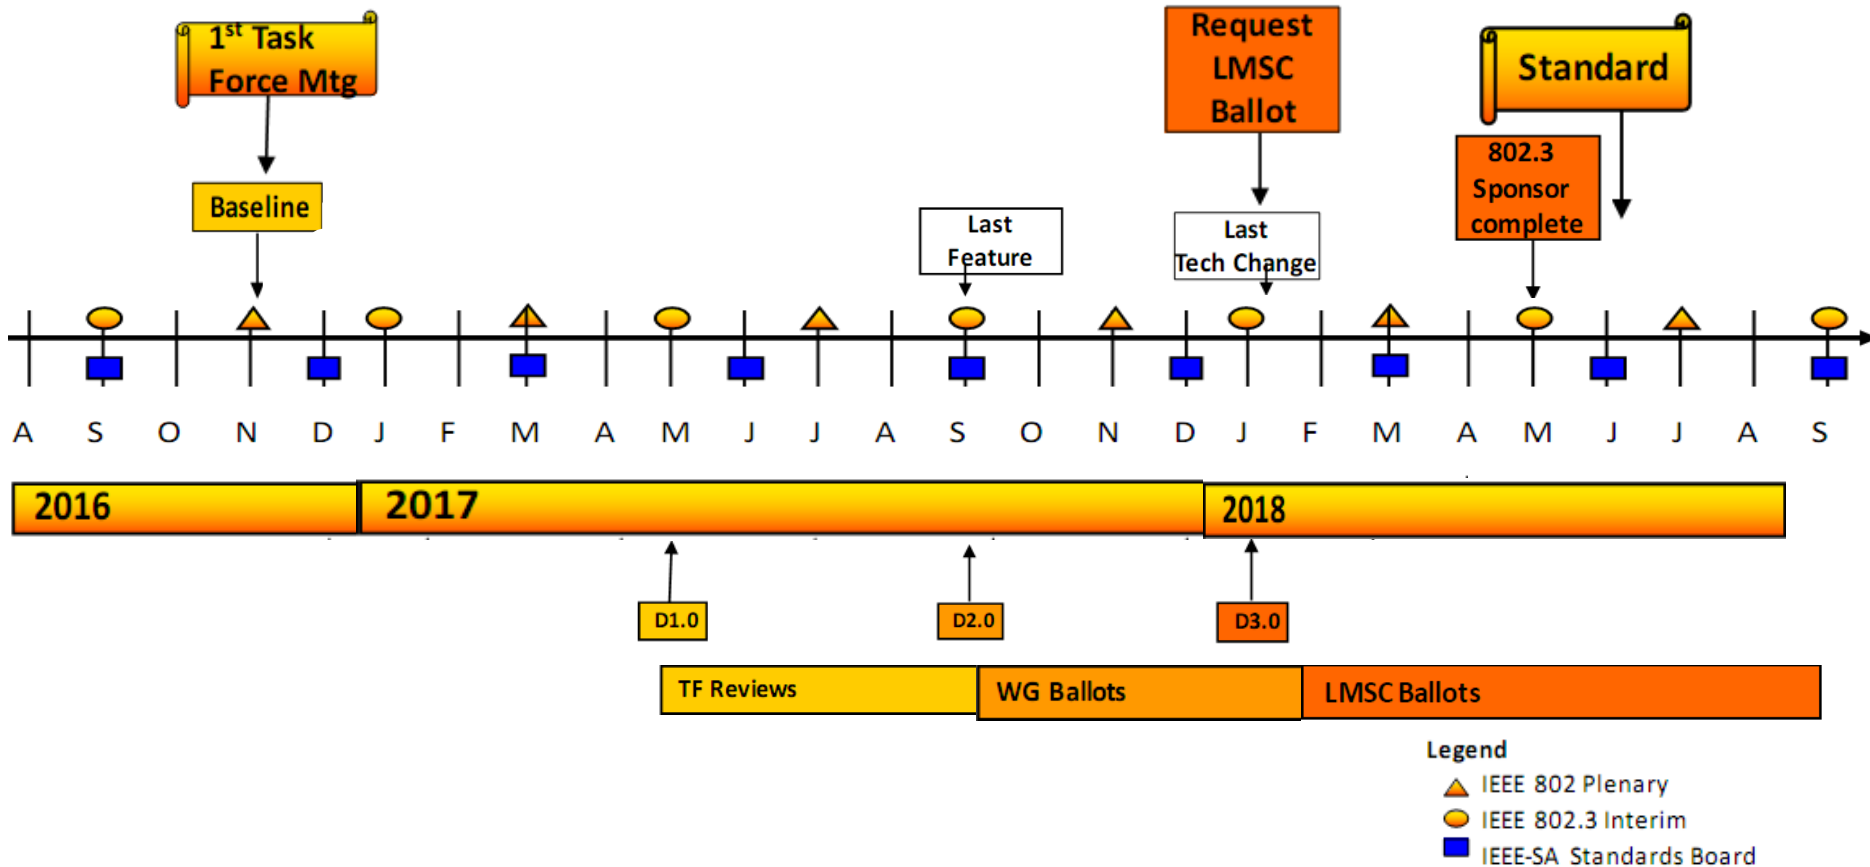

# Information from IETF 98

- Due to work of revised datastore (draft-ietf-netmod-revised-datastores), there are some implications on YANG & YANG modules:
  - No changes to the YANG language are required.
  - Modules with split config and state trees will result in data duplication in the operational datastore.
  - Revise published modules that use split trees, and rewrite them to use a single tree (notably ietf-interfaces, ietf-ip, ietf-routing et.al.)
- Robert presented .3cf work in IETF especially work that are not in scope and hopefully we can do it in IETF.

# Next Step

- Rewrite Ethernet interface and PSE modules to use a single tree.
- Revise Ethernet interface/PSE sections and review D0.1.
- Volunteers to work on EPON and OAM and adopt them in May meeting.

# Draft Timeline

Draft proposal

Thank you!
