Stewart, Heath — Analog Devices

Comment Type **T** *Comment Status* **D**

The 200nF maximum limit on a PSE's Cout is limiting. The current maximum limit in some common circuit configurations can cause stability issues. The attached analysis demonstrates that the proposed change does not create the potential for one PSE to detect another PSE as a valid PD. In addition, since no other detection parameters are affected, there is no impact on interoperability of existing PoDL networks.
This has been submitted as Maintenance Request 1308 and has been put forth as a comment to expedite the change process.
There is no impact on existing systems. Inclusion of this change as a comment will allow vendors the ability to take advantage of specification relaxation before any devices are out in the market.
See analysis at http://www.ieee802.org/3/maint/requests/maint_1308.pdf

SuggestedRemedy

Change Table 104-3 Item 5 Max limit from 200 nF to 2.64 uF.

Trowbridge, Steve — Nokia

Comment Type **T** *Comment Status* **D**

Since the signal ordered set is reserved for INCITS T11 Fibre Channel use, it is presumably an invalid block if received on an Ethernet PHY (and there is nothing in the standard that would tell you what to do with this block if it were valid). However, the wording of 82.2.3.5 (c) does not label it as an invalid block since it is a control code that is listed in Table 82-1

SuggestedRemedy

Change footnote (a) of Table 82-1 to read "INCITS T11 Fibre Channel uses O code 0x5C for the Signal ordered set. OIF uses O code 0x5 for the FlexE [B58] ordered set".
Remove the last row of Table 82-1 and footnote b.

Proposed Response *Response Status* **W**

PROPOSED ACCEPT IN PRINCIPLE.

Change footnote a of Table 82-1 to read "INCITS T11 Fibre Channel uses O code 0xF for the signal ordered set. OIF uses O code 0x5 for the FlexE [B58] ordered set."
Remove the last row of Table 82-1 and footnote b.

In 82.2.3.1 change:
"The control characters, /Q/ and /Fsig/, for ordered sets are labeled as O0 since they are only valid on the first octet of the XLGMII/CGMII." to:
"The control character /Q/ for a sequence ordered set is labeled as O0 since it is only valid on the first octet of the XLGMII/CGMII."

In 82.2.3.9:
Delete "An additional ordered set, the signal ordered set, has been reserved and it begins with another control code."
Change: "The ordered set control characters (/Q/ and /Fsig/) indicate the start of an ordered set." to:
"The ordered set control character /Q/ indicates the start of an ordered set."
Change "See Table 82-1 for the mappings." to "See Table 82-1 for the mapping."
Delete "Signal ordered sets are not deleted for clock compensation."

It looks like ANSI has changed a lot of document numbers. Most of the ANSI documents cannot be found as referenced in this subclause. An ANSI webstore search on ANSI/TIA does not produce any of the documents cited with that lead on the document number. Fibre Channel and FDDI documents cannot be located with the cited numbers.

SuggestedRemedy

Update to locatable documents, some detailed updates are included in additional comments.

Proposed Response *Response Status* **W**

PROPOSED ACCEPT IN PRINCIPLE.

In 1.3, update the normative references to ANSI documents as described in <http://www.ieee802.org/3/maint/public/healey_3_0917.pdf> and re-sort. Change all citations of these references to agree with the modifications made to 1.3.

Grow, Robert RMG Consulting

Comment Type **T** *Comment Status* **D** *references*

CISPR 22 has been withdrawn (2008 revision), IEC webstore indicates it is replaced by CISPR-32. This probably isn't a problem for the 8.7.3.2 and 9.9.7.2.1 citations because both of those clauses are deprecated but is an issue for 15.6.2 citation.

SuggestedRemedy

Consider deprication of clause 15 (10BASE-F).

Proposed Response *Response Status* **W**

PROPOSED REJECT.

Clause 15 and Clause 18 together define 10BASE-FL which is currently expected to have continued use. Therefore Clause 15 should not be deprecated.

Withdrawn standards may still be used as normative references. See IEEE-SA Standards Style manual 10.5.1 item h).
"Reference to withdrawn standards may be made; however, sponsors are cautioned that withdrawn standards may contain obsolete or erroneous information and may be difficult to retrieve."

As pointed out in the comment, CISPR 22 is available from the IEC webstore.

This revision does not appear to be available on the ETSI website as an historical document.

SuggestedRemedy

Update to ETSI TS 101 270-1 V1.4.1 (2005-10), or we need to update the footnote for a place to get historical documents.

Proposed Response *Response Status* **W**

PROPOSED REJECT.

The reference is present at <www.etsi.org>.
Historical documents are included in the search results by checking the "All versions" radio butten under "Filter search results" -> "VERSION / STATUS" (left pane of the search results window).

Cl **1** *SC* **1.3** *P* **57** *L* **12** # 59

Grow, Robert RMG Consulting

Comment Type **TR** *Comment Status* **D** *references*

The cited document has been revised (more than once). The title of the historical version (on the IEC webstore) does not agree with this normative reference. We continue to cite this standard in recent clauses. Note depricated clause 23 includes year citations. Clause 40 cites the 1990 revision. Clause 55 cites 1996 as does clause 113 and 126.

SuggestedRemedy

Preferred solution is to update to an undated reference with current title (IEC 60603-7:2008+AMD1:2011, Connectors for electronic equipment - Part 7: Detail specification for 8-way, unshielded, free and fixed connectors). Alternate, update reference and referencing clauses to current version. Another less preferrable alterrnative would be to add additional references for other revisions as has been done for the following fiber optic standards (this would require paying attention to the undated citations in various clauses).

Proposed Response *Response Status* **W**

PROPOSED ACCEPT IN PRINCIPLE.

Change the reference to "IEC 60603-7, Connectors for electronic equipment - Part 7: Detail specification for 8-way, unshielded, free and fixed connectors."

Per the IEEE-SA Standards Style Manual, 10.5.1 item c), "Note that in-text reference to a specific clause, subclause, table, or figure of another document shall be dated even if the undated version of the document is listed in the normative references." Change reference to "IEC 60603-7" in 14.5.1, 14.10.4.5.14 (MR1), and 14.10.4.7.1 (LS16) to "IEC 60603-7:1990" as they refer to specfic a clause and specific figures.

55.8.1 and 126.8.1 include normative requirements related to IEC 60603-7-4 and IEC 60603-7-5 but these documents are not included in the list of normative references. Add the following to the list of normative references.
"IEC 60603-7-4, Connectors for electronic equipment - Part 7-4: Detail specification for 8-way, unshielded, free and fixed connectors, for data transmissions with frequencies up to 250 MHz."
"IEC 60603-7-5, Connectors for electronic equipment - Part 7-5: Detail specification for 8-way, shielded, free and fixed connectors, for data transmissions with frequencies up to 250 MHz."

In 55.12.8 and 126.12.8, the Value/Comment for item MDI1 is inconsistent with the subclause reference. Replace the contents of the "Value/Comment" row with the following.
"Eight-pin connectors meeting the requirements of IEC 60603-7-4 (unscreened) or IEC 60603-7-5 (screened)."

113.8.1 includes normative requirements related to IEC 60603-7-51 and IEC 60603-7-81 but these documents are not included in the list of normative references. Add the following to the list of normative references.
"IEC 60603-7-51, Connectors for electronic equipment - Part 7-51: Detail specification for 8-way, shielded, free and fixed connectors, for data transmissions with frequencies up to 500 MHz."
"IEC 60603-7-81, Connectors for electronic equipment - Part 7-81: Detail specification for 8-way, shielded, free and fixed connectors, for data transmissions with frequencies up to 2 000 MHz."

In 113.12.8, the Value/Comment for item MDI1 is inconsistent with the subclause reference. Replace the contents of the "Value/Comment" row with the following.
"Eight-pin connectors meeting the requirements of IEC 60603-7-51 with the improved characteristics and frequency extensions specified in IEC 60603-7-81."

Grow, Robert RMG Consulting

Comment Type **ER** *Comment Status* **D**

The maintenance request changes are incomplete. With the change to the paragraph above the Editor's Note, Clause 96, 97, and 115 have the same identical paragraph --that's good. Unfortunately, the variious PICS items derived from the shall in that paragraph are inconsistent between clauses.

Clause 96 has a major option AUTO, and in 96.11.4.9 ES2 is also optional. This seems correct.

Clause 97 has no major option for its 97.11.13 ES1, which has a Status of M. This needs to be corrected!

Clause 115 has a major option AE, with 115.14.15 but Status being mandatory, with a Yes/NA in the Support.

Clause 104 (PoDL) does not have the same paragraph, but in the description for applicabilitry of ISO 26262, uses a may and therefore there is no associated PICS item.

SuggestedRemedy

The minimal change would be to change 97.11.13 Status to O and Support to Yes, N/A.

For consistency, 115.14.15, E3, Status should be changed to O.

Consider change of text in subclause 104.8.1 to read similar to the paragraph in the three PHY clauses with a shall when required by the application, with the addition of a related PICS item.

Proposed Response *Response Status* **W**

PROPOSED ACCEPT IN PRINCIPLE.

No changes to 97.11.13 ES1 entry. 97.11.13 ES1 has a Value/Comment of:
"Conforms to IEC 60950-1 (for IT and motor vehicle applications) and to ISO 26262 (for motor vehicle applications only, if required by the given application)"
A status of "M" for this entry matches the text in 97.9.1 which says:
"All equipment subject to this clause shall conform to IEC 60950-1 (for IT and motor vehicle applications) and to ISO 26262 (for motor vehicle applications only, if required by the given application)."

Apply the following changes in 115.14.16
- change Value/Comment for E2 to read "Conforms to IEC 60950-1 (for IT and motor vehicle applications) and to ISO 26262 (for motor vehicle applications only, if required by the given application)."
- change Feature for E2 to read "General Safety"
- change Value/Comment for E3 to read "If intended for motor vehicle application"
- change Feature for E3 to read "Conforms to ISO 26262"
Status values and reference values remain unchanged.

Apply the following changes in 96.11.4.9
- change Value/Comment for ES1 to read "Conforms to IEC 60950-1 (for IT and motor vehicle applications) and to ISO 26262 (for motor vehicle applications only, if required by the given application)."
- change Feature for ES1 to read " General Safety"
- change Value/Comment for ES2 to read "If intended for motor vehicle application"
- change Feature for ES2 to read "Conforms to ISO 26262"
- change Status for ES2 to "AUTO:M"
- remove ES3 altogether
Remaining status values and reference values remain unchanged.

Cl **78** *SC* **78.1.4** *P* **38** *L* **6** # 65

Grow, Robert RMG Consulting

Comment Type **ER** *Comment Status* **D**

Tables 78-1. 78-2 and 78-4 are growing large enough to become a problem finding relevant items. When amendments 10 through 12 are merged, the problems will become more obvious. We need a consistent sort order, and as operational data rates multiply, interfaces are no longer linked to only one specific speed. This makes a speed ordered list which has been the approach to date problematic. Also, within a speed, the number of port types is increasing resulting in longer blocks of the table that are not consistently ordered within a speed.

SuggestedRemedy

Sort all three tables using the rules for 1.4 sort order.

Proposed Response *Response Status* **W**

PROPOSED ACCEPT IN PRINCIPLE.

Dedicate one row to each to each PHY and interface (for example, in Table 78-1, split XLAUI and CAUI-10 into separate rows).

--- Sort order option 1 ------
Sort the result using the rules described at <http://www.ieee802.org/3/WG_tools/editorial/requirements/words.html>, "Definition sort order".

--- Sort order option 2 ------
Sort the result in "speed/reach" order using the following set of rules.
1. Increasing speed.
2. Increasing reach (maximum supported distance over the medium).
3. Decreasing number of lanes

The following supplemental rules address are included to address special cases.
4. PHY "family designations, by convention, are assigned a reach of 0.
5. "Copper" PHYs precede "Fiber" PHYs (all else being equal).
6. Alphanumeric sort (all else being equal).

Cl **78** *SC* **78.2** *P* **40** *L* **35** # 66

Grow, Robert RMG Consulting

Comment Type **ER** *Comment Status* **D** *bucket*

Amendments have not been consistent in how timing parameters are entered. At line 35, there are two port types sharing values in the same row, yet in the next row, two additional port types using the same values are in separate rows. At lines 21, 41 and 46, individual port types are listed, even when adjacent port types have identical values. If this table is sorted in 1.4 sort order, then values should be listed for each port type, and not shared in a row.

SuggestedRemedy

Split rows with multiple port types in the first column into separate rows.

Proposed Response *Response Status* **W**

PROPOSED ACCEPT.

See also comment #65.

Cl **78** *SC* **78.5** *P* **55** *L* **48** # 67

Grow, Robert RMG Consulting

Comment Type **ER** *Comment Status* **D** *bucket*

Like Table 78-2, this table is inconsistent in how different port types with identical values are displayed. This table adds the compliation that identical values are correlated with the second column rather than the first column. (Compare rows at 31 with the row at line 48.)

While this listing is more compact in space used, as the table grows, finding port types when not sorted by name will become increasingly difficult.

SuggestedRemedy

Where multiple cases exist for a port type, the column 1 should only list one port type, in a mergd cell, but each case having its own row for a given port type as is done at line 31.

Proposed Response *Response Status* **W**

PROPOSED ACCEPT.

See also comment #65.

Cl **73** *SC* **73.6.4** *P* **516** *L* **41** # 68

Marris, Arthur — Cadence Design Syste

Comment Type **TR** *Comment Status* **D**

Implement maintenance request 1283

SuggestedRemedy

Delete 3rd paragraph of 73.6.4 and replace with the following note:

NOTE- Previous editions of this standard prohibited advertisement of PHYs that support operation over electrical backplanes with PHYs that support operation over copper cable assemblies.

Proposed Response *Response Status* **W**

PROPOSED ACCEPT IN PRINCIPLE.

Replace the 3rd paragraph of 73.6.4 with the following note.
"NOTE- Previous editions of this standard prohibited simultaneous advertisement of PHYs that support operation over electrical backplanes with PHYs that support operation over copper cable assemblies."

Also remove PICS item LE18 as requested in Maintenance Request 1283.

Cl **91** *SC* **91.5.4.2** *P* **393** *L* **12** # 69

Marris, Arthur — Cadence Design Syste

Comment Type **TR** *Comment Status* **D**

Improve implementation of maintenance request 1299. Use 802.3cd draft 2.1 as a reference in doing this.

SuggestedRemedy

1) Consider moving amap_bad_count definition to 91.5.4.2.3 Counters
2) Add fec_optional_states variable to 91.5.4.2.1 Variables
Insert fec_optional_states definition after fec_lane as follows:
fec_optional_states
Boolean variable that is true if the optional states are implemented and false otherwise.
3) Add "FEC optional states supported" to Table 91-3-MDIO/RS-FEC status variable mapping
4) Add 91.6.6 renumbering subsequent clauses:
91.6.6 FEC_optional_states
This variable is set to true when the optional states in the FEC synchronization state diagram are implemented. This variable is mapped to the bit defined in 45.2.1.102 (1.201.7).
5) Add new bit to 45.2.1.107 RS-FEC status register (Register 1.201)

45.2.1.107 FEC optional states supported (1.201.7)
When read as a one, bit 1.201.7 indicates that the RS-FEC described in Clause 91 implements the optional
states in Figure 91-8. When read as a zero, bit 1.201.7 indicates that the optional states are not implemented.

Proposed Response *Response Status* **W**

PROPOSED ACCEPT IN PRINCIPLE.

In Figure 91-8, move the optional states down by making the dotted box the same shape as per the P802.3cd draft.
Move amp_bad_count definition to 91.5.4.2.3 Counters
Insert fec_optional_states definition in 91.5.4.2.1 after fec_lane:
fec_optional_states
Boolean variable that is true if the optional states are implemented and false otherwise.
Insert a new row in Table 91-3 after the "RS-FEC high SER" row:
"FEC optional states supported", "RS-FEC status register", "1.201.7", "fec_optional_states"
Insert a new subclause after 91.6.5 hi_ser:
91.6.6 FEC_optional_states
This variable is set to true when the optional states in the FEC synchronization state diagram are implemented. This variable is mapped to the bit defined in 45.2.1.107 (1.201.7).

Add a new row to Table 45-85:
"1.201.7", "FEC optional states supported", "1 = RS-FEC supports optional states in Figure 91-8 0 = RS-FEC does not support optional states in Figure 91-8", "RO"
and update the reserved row accordingly.

Insert a new subclause after 45.2.1.107.6:
45.2.1.107.7 FEC optional states supported (1.201.7)
When read as a one, bit 1.201.7 indicates that the RS-FEC described in Clause 91 implements the optional states in Figure 91-8. When read as a zero, bit 1.201.7 indicates that the optional states are not implemented.

Cl **119** *SC* **119.6** *P* **618** *L* **29** # 72

Slavick, Jeff Broadcom Ltd

Comment Type **T** *Comment Status* **D** *bucket*

The remote loopback ability bit for 25G points to the 40/100G extended ability register. But 25G has it's own extended ability register which is where this ability bit should reside.

SuggestedRemedy

In Table 45-20 define bit 15 to be 25G PMA Remote Loopback Ability
Add: 45.2.1.17.1 25G PMA remote loopback ability (1.19.15)
When read as a one, bit 1.19.15 indicates that the PMA is able to perform the remote loopback function.
When read as a zero, bit 1.19.15 indicates that the PMA is not able to perform the remote loopback function.
If a PMA is able to perform the remote loopback function, then it is controlled using the PMA remote
loopback bit 1.0.1 (see 45.2.1.1.4).
In Table 109-3 change the MDIO reference to 1.19.15

Proposed Response *Response Status* **W**

PROPOSED REJECT.

While it is true that it would have been cleaner to have defined bit 1.19.15 in the 25G PMA/PMD extended ability register to indicate the remote loopback ability for the 25G PMA, this was not how it was defined in IEEE Std 802.3by-2016. If this is changed now it will invalidate any existing compliant implementations of the 25G PMA.

Cl **91** *SC* **91.5.3.3** *P* **387** *L* **33** # 73

Slavick, Jeff — Broadcom Ltd

Comment Type **E** *Comment Status* **D**

In other clauses we will sub-heading optional features and 803.cd is doing this with the new degrade monitor feature. Currently the RS-FEC has 2 optional features.

SuggestedRemedy

Place the last 5 paragraphs of 91.5.3.3 under a heading of 91.5.3.3.2 Bypass Error Indication (optional)
Move the paragraph starting with "The Reed-Solomon decoder indicates errors" to be the 3rd paragraph of 91.5.3.3
Place the paragraph beginning with "The Reed-Solomon decoder may provide the option to perform error detection" and the NOTE under a new sub-heading 91.5.3.3.1 Bypass Error Correction (optional)
Update the references in 91.6.1, 91.6.2, 91.6.3, 91.6.4, 91.6.5, 91.7.3, 91.7.4.2, 93.1, 93.8.2.3, 45.2.1.106.2, 45.2.1.106.3, 45.2.1.107.7, 45.2.1.107.8, 45.2.1.107.9

Proposed Response *Response Status* **W**

PROPOSED REJECT.

The P802.3bj project decided to place all of the text describing the Reed-Solomon decoder in a single subclause, including the optional features.
Changing this and creating a new subclause for each optional feature would cause a large number of changes to the draft without any significant improvement in the clarity of the draft.

Cl **108** *SC* **108.5.3.2** *P* **594** *L* **1** # 74

Slavick, Jeff — Broadcom Ltd

Comment Type **E** *Comment Status* **D**

If the modification to Clause 91 are done to make the optional features of the rsfec decoder sub-headings then do the same edit to keep things common across clauses. Currently the RS-FEC has 2 optional features.

SuggestedRemedy

Place the last 4 paragraphs and NOTE3 of 108.5.3.2 under a heading of 108.5.3.2.2 Bypass Error Indication (optional)
Move the paragraph starting with "The Reed-Solomon decoder indicates errors" and NOTE2 to be the 3rd paragraph of 108.5.3.2
Place the paragraph beginning with "The Reed-Solomon decoder may provide the option to perform error detection" and the NOTE under a new sub-heading 108.5.3.2.1 Bypass Error Correction (optional)
Update the references in 108.6.1, 108.6.2, 108.6.4, 108.6.5, 108.6.6, 108.7.3, 108.7.4.2, 110.1, 111.1, 45.2.1.106.2, 45.2.1.106.3, 45.2.1.107.7, 45.2.1.107.8, 45.2.1.107.9

Proposed Response *Response Status* **W**

Zimmerman, George CME Consulting, Inc.

Comment Type **E** *Comment Status* **D** *bucket*

PMA_LINK.indication (link_status) is not shown connecting the PMA to the PCS in Figure 55-4 '10GBASE-T service interfaces', is not listed in subclause 55.2.2 'PMA service interface', and is not used in the PCS state diagram on referenced in the PCS related text, but is shown in Figure 55-3. (comment 110, 802.3bq 3rd WG recirc)

SuggestedRemedy

Suggest that:
[1] Remove the 'link_status' signal from the connection above the 'LINK MONITOR' block to the
'PCS TRANSMIT & TRANSMIT CONTROL' block in figure 55-3 'Function block diagram'.
[2] Remove the 'link_status' signal from figure 55-5 'PCS reference diagram'.
[3] Remove the 'link_status' signal from the connection above the 'LINK MONITOR' block to the
'PMA SERVICE INTERFACE' in figure 55-21 'PMA reference diagram' (keep connection to TDI)
[4] Update the variable definition for 'link_status' in subclause 55.4.5.1 'State diagram variables' to read 'The link_status parameter set by PMA Link Monitor state diagram and communicated through the PMA_LINK.indicate primitive.'.

Proposed Response *Response Status* **W**

PROPOSED ACCEPT IN PRINCIPLE.

Apply the suggested remedy except for the variable definition for 'link_status' in subclause 55.4.5.1 'State diagram variables'. Change this to read 'The link_status parameter set by PMA Link Monitor state diagram and communicated through the PMA_LINK.indication primitive.'

Cl **55** *SC* **55.2.1.2.3** *P* **694** *L* **40** # 77

Zimmerman, George CME Consulting, Inc.

Comment Type **E** *Comment Status* **D** *bucket*

This subclause states that 'The effect of receipt of this primitive is specified in 55.3.6.2.' however 'PMA_LINK.indication', nor the 'link_status' parameter communicated by this primitive,
are referenced in subclause 55.3.6.2 'State diagram parameters' for the PCS state diagrams.
Instead this primitive is generated by the Link Monitor state diagram and used by Auto-Negotiation. (comment 115, 802.3bq 3rd WG recirc)

SuggestedRemedy

Suggest the text 'The effect of receipt of this primitive is specified in 55.3.6.2.' should be replaced with 'Auto-Negotiation uses this primitive to detect a change in link_status as described in Clause 28.'.

Proposed Response *Response Status* **W**

Comment Type **E** *Comment Status* **D** *bucket*

While this subclause states that the PCS transmit function shall meet the PCS state diagram
(Figure 55-16) and bit ordering (Figures 55-6 and 55-8) I don't believe that either of these address the operation of what appears to be a three way multiplexor controlled by the PMA_TXMODE.indication parameter tx_mode which selects between training (SEND_T), normal (SEND_N) and sending zeros (SEND_Z). There does appear to be a description of this
in paragraphs six, seven and nine of this subclause, however they do not contain 'shall' statements, nor does it appear there are any related shall statements elsewhere. Based on this
there doesn't appear to be any 'shall' statements in relation to the control of the parameter tx_mode. (comment 120 802.3bq 3rd WG recirc)

SuggestedRemedy

Suggest that:
[1] The text '... has the value SEND_Z, PCS Transmit passes a vector of zeros ...' be change to
read '... has the value SEND_Z, PCS Transmit shall pass a vector of zeros ...'.
[2] The text '... has the value SEND_T, PCS Transmit generates sequences ...' be changed to
read '... has the value SEND_T, PCS Transmit shall generate sequences ...'.
[3] The text 'In the normal mode of operation, the PMA_TXMODE.indication message has the
value SEND_N, and the PCS Transmit function uses a ...' to read 'If a PMA_TXMODE.indication message has the value SEND_N, the PCS is in the normal mode of
operation, and the PCS Transmit function shall use a
[4] The PICS be updated to add these three new shall statements.

Comment Type **E** *Comment Status* **D** *bucket*

Subclause 55.3.7.1 'Status' seems to be the only location where the definition of the parameter
PCS_status is provided where it states that 'Indicates whether the PCS is in a fully operational
state. It is only true if block_lock is true and hi_lfer is false.'. In addition the PCS_status parameter is defined as having the values 'OK' and 'NOT_OK' (see 55.2.2.6.1) and not 'true' and 'false'.
Since this is a subclause of 55.3.7 'PCS management' suggest this is not the best place to provide the only definition. Instead, since Figure 55-3 shows PCS_status sourced from the PCS RECEIVE block, suggest this definition be provided in subclause 55.3.2.3 'PCS Receive
function'. (comment 137 802.3bq 3rd WG recirc)

SuggestedRemedy

Suggest that in subclause 55.3.2.3 'PCS Receive function' the text '... hi_lfer is de-asserted, the PCS Receive process continuously accepts blocks.' be changed to read '... hi_lfer is deasserted,
the PCS_status parameter of the PMA_PCSSTATUS.request primitive is set to OK,
and the PCS Receive process continuously accepts blocks.'.

Comment Type **E** *Comment Status* **D** *bucket*

Delete the subclause 55.3.6.3 'Messages', a subclause 55.3.6.2 'State diagram parameters' (comment 139 802.3bq 3rd WG recirc)
since for the following reasons there are not related to the state diagram.
[1] The message 'PMA_UNITDATA.indication' and the parameter 'rx_symb_vector' are not referenced in the PCS state diagrams.
The input to Figures 55-18 and 55-19 'PCS 64B/65B Receive state diagram' are 'rx_coded' which is the 'Input to decode function 65B block' in Figure 55-7 'PCS Receive bit ordering'. As
can be seen in that figure, there are a number of processes that have already been performed
on the parameter 'rx_symb_vector' from the message 'PMA_UNITDATA.request' before 'rx_coded' is presented as the input to the PCS state diagram.
[2] The message 'PMA_UNITDATA.request' and the parameter 'tx_symb_vector' are not referenced in the PCS state diagrams. The output of Figures 55-16 and 55-17 'PCS 64B/65B Transmit state diagram' are 'tx_coded' which is the 'Output of encoder function 65B
block' in Figure 55-6 'PCS transmit bit ordering'. As can be seen in that figure, there are a number of processes that have to be performed before the parameter 'tx_symb_vector' for the
message 'PMA_UNITDATA.request' is generated.
[3] 'PCS_status' is not a message, but instead a parameter of a message, regardless it is not
generated or used by the by the PCS state diagrams.

SuggestedRemedy

Delete the subclause 55.3.6.3 'Messages'.

The alignment marker payloads transmitted on FEC lane 1 should correspond to PCS lanes "1, 5, 9, 13, and 17" and not PCS lanes "0, 5, 9, 13, and 16".

SuggestedRemedy

Change "0, 5, 9, 13, and 16" to "1, 5, 9, 13, and 17".

Proposed Response *Response Status* **W**

PROPOSED REJECT.

The text on page 381, line 32 is:
"In addition it substitutes the fixed bytes of the alignment markers corresponding to PCS lanes 1, 2, and 3 with the fixed bytes for the alignment marker corresponding to PCS lane 0. Similarly, it substitutes the fixed bytes of the alignment markers corresponding to PCS lanes 17, 18, and 19 with the fixed bytes for the alignment marker corresponding to PCS lane 16. The variable bytes BIP or CD are unchanged. This process simplifies receiver synchronization since the receiver only needs to search for the fixed bytes corresponding to PCS lane 0 on each FEC lane. When the optional EEE deep sleep capability is supported, the receiver only needs to search for the fixed bytes corresponding to PCS lanes 0 and 16."
Hence the text being commented on is correct.

There is no PICS item for normative requirement to support fast wake TLV for 40G and above (P42 L26).

SuggestedRemedy

Add appropriate item(s) to the table.

Proposed Response *Response Status* **W**

PROPOSED ACCEPT IN PRINCIPLE.

Add the following row to 78.6.3 "Major capabilities/options" after the row for item "10G".
*40G | Support 40G or higher operation | 78.4 | Support for 40 Gb/s or higher operation | O | Yes [], No []

Also change the item label in 78.6.3 from "10G" to "*10G".

Add the following row to 78.6.4 "DLL requirements" before the row for item "DLR1" and renumber accordingly.
DLR1 | Fast Wake TLV | 78.4 | Support EEE Fast Wake TLV defined in 79.3.6 | 40G:M | Yes [], N/A []

Cl **79** *SC* **79.3.1.4** *P* **63** *L* **30** # 106

Ran, Adee Intel

Comment Type **T** *Comment Status* **D**

This subclause title refers to "rules".

The only rule here is "An LLDPDU should contain no more than one MAC/PHY Configuration/Status TLV."

As written, this is not a rule but rather a recommendation, and an unclear one. There is no information to implementors on what to do if a received LLDPDU does contain more than one TLV of the same type. If two TLVs contain different information then there is ambiguity in the interpretation.

Looking at the meaning of this TLV, there is no sense in sending more than one, especially if the information in two TLVs within the same LLDPDU is different.

In the PICS this appears as an option (status "O"), which is even more confusing; "should" is a recommendation, not an option ("may" is an option).

It seems that this "should" should be a "shall" and the PICS status should be "M".

Same comment applies in multiple subclauses within clause 79.

SuggestedRemedy

Change "should" to "shall" here and in ths similar subclauses of clause 79, and update the PICS tables accordingly.

Optionally, add a note that previous revisions of this standard had a recommendation instead of a normative requirement (with editorial license).

Proposed Response *Response Status* **W**

PROPOSED REJECT.

Clause 79 defines seven 802.3 subtypes, one of which is deprecated. For all seven, there is a subclause that states that an LLDPDU "should" contain no more than one TLV of that type. All of them except for the EEE Fast Wake TLV has a corresponding PICS item that is "O".

IEEE Std 802.1AB-2016, 9.2.7.7.2 "General validation rules for all TLVs" contains the following note:

"NOTE-Usage rules for individual TLVs allow some TLVs to appear more than once in an LLDPDU. Duplicate TLVs result in any one of the values being placed in the MIB, can cause the discard stats to increment, and can cause the change marker for the MIB entry to change if any of the TLV copies change the value even if the value finally recorded is unchanged. The only thing guaranteed is that the MIB value is set to one (unspecified) of the TLV values, and if that value is different to what was previously in the MIB then the change marker is set."

Changing "should" to "shall" would invalidate some implementations that send more than one TLV of the same type in an LLDPDU.

"must" here should really be a "shall", it is not an unavoidable situation.

SuggestedRemedy

Change to "shall".

Proposed Response *Response Status* **W**

PROPOSED ACCEPT.

Cl **85** *SC* **85.8.3.3** *P* **233** *L* **1** # 109

Ran, Adee Intel

Comment Type **T** *Comment Status* **D** *bucket*

The text here defines "The normalized amplitude" of the three coefficients, but subclause 85.8.3.3.1 refers to the coefficients themselves (not normalized amplitudes), while 85.8.3.3.2 refers to normalized amplitudes, and 85.8.3.3.3 again does not. Since these four subclauses all discuss the same coefficients, this can be quite confusing for the reader.

There is no reason to call this a normalized amplitude of the coefficient; it is really the coefficient value. (a coefficient has no amplitude, and "normalized amplitude" is used for very different things elsewhere).

This comment also applies in 92.8.3.5.1 through 92.8.3.5.4.

SuggestedRemedy

Change "The normalized amplitude of coefficient c(-1) is the value of" to "Coefficient c(-1) is defined as the value of". Change similarly for the other coefficients.

In 85.8.3.3.2, delete the 3 instances of "the normalized amplitude of".

Apply similarly in clause 92.

Proposed Response *Response Status* **W**

PROPOSED ACCEPT IN PRINCIPLE.

The coefficients are in fact normalized but this distinction has little value in the interpretation and application of the standard. For the sake of consistency, make the following changes.

Change the last paragraph of 85.8.3.3 to the following.
"Coefficient c(-1) is defined to be the value of qi at time t0 + (Dp - 1) UI. Coefficient c(0) is defined to be the value of qi at time t0 + Dp UI. Coefficient c(1) is defined to be the value of qi at time t0 + (Dp + 1) UI."

In the first paragraph of 85.8.3.3.2, remove two instances of "the normalized amplitude of coefficient".

In the first sentence of the second paragraph of 85.8.3.3.2, remove "the normalized amplitude of".

In 92.8.3.5.1, change all instances of "normalized coefficients" to "coefficients" and all instances of "normalized transmit equalizer coefficients" to "transmit equalizer coefficients".

In the first paragraph of 92.8.3.5.4, remove two instances of "the normalized amplitude of coefficient".

In the first sentence of the second paragraph of 92.8.3.5.4, remove "the normalized amplitude of".

Cl **85** *SC* **85.8.3.3.3** *P* **233** *L* **27** # 110

Ran, Adee Intel

Comment Type **T** *Comment Status* **D** *bucket*

There are no restrictions in this clause on the "minimum steady state differential output voltage" and "maximum steady state differential output voltage" - since these parameters are not defined.

The corresponding parameter is "Transmitter DC amplitude" but it is only specified for unequalized state (see 85.8.3.3, paragraph after item 6). In other settings, the output voltage with a long run is governed by c(0)+c(-1)+c(1) and in fact there is no specification for a minimum value of that in clause 85 (unlike clause 72).

As stated, this is an aspect of the implemented coefficient range. But the limits are also based on combinations of all coefficients (e.g. their absolute sum is no larger than unity).

This comment also applies to 92.8.3.5.5 (where there are restructions on minimum steady-state voltage, but only in preset state) and 93.8.1.5.5, which re-used the same text.

The suggested remedy is based on the text in clause 136.

SuggestedRemedy

Change
"based on the coefficient range or restrictions placed on the minimum steady state differential output voltage or the maximum peak-to-peak differential output voltage"

To
"based on the range of that coefficient or the combination of coefficients."

Alternatively, change to "based on the coefficient range or restrictions on the maximum peak-to-peak differential output voltage".

Apply also in clauses 92 and 93.

Proposed Response *Response Status* **W**

PROPOSED ACCEPT IN PRINCIPLE.

Change the first paragraph of 85.8.3.3.3, 92.8.3.5.5, and 93.8.1.5.5 to the following.
"When sufficient "increment" or "decrement" requests have been received for a given coefficient, the coefficient will reach a lower or upper bound based on the range of that coefficient or the combination of coefficients."

Loopback is not a PMD function (as noted in the text). It may be considered a PHY function, but in this case, the wording "adjacent PMA" is inappropriate.

This subclause may be considered out of place. There is no loopback subclause in optical PMDs. In 802.3cd it was decided not to have a loopback subclause in the electrical PMDs. If the NOTEs are considered important, they can be moved to the appropriate subclause in the PMA clause.

Also applies in similar subclauses of 93, 110, and 111.

SuggestedRemedy

Change "adjacent PMA" to "PMA".

Consider deleting this subclause and moving the notes to the appropriate PMA clauses.

Proposed Response *Response Status* **W**

PROPOSED REJECT.

The clause defines the "Physical Medium Dependent (PMD) sublayer and baseband medium, type ...". The PMD must have an "adjacent" PMA (in that you cannot connect the PCS/FEC directly to the PMD).

The text is correct and perhaps helpful to a user of the standard looking for a "PMD loopback function".

Equation (92-31) uses the cascade() function, which is only defined in annex 93A, but there is no cross reference.

Comment also applies to 92.10.7.2.

SuggestedRemedy

Append to the first paragraph of 92.10.7:

"The channel path calculations use the function cascade() defined in 93A.1.2.1."

Alternatively, add a definition of cascade() (refernce to 93A.1.2.1) in the "where" text following equations 92-31, 92-32, and 92-33.

Proposed Response *Response Status* **W**

PROPOSED ACCEPT IN PRINCIPLE.

Add the following sentence to the end of the first paragraph of 92.10.7.
"The signal path definitions include the function cascade() defined in 93A.1.2.1."

Cl **93A** *SC* **93A.2** *P* **696** *L* **35** # 116

Ran, Adee Intel

Comment Type **T** *Comment Status* **D**

The parameter beta was added to equation 93A-46 to fix an error (missing factor 2) in the original equation. With the current quation, correct accounting for transition time requires that beta be 2 and this should be stated explicitly by every clause that invokes COM.

This equation is used with the default beta=1 only in two cases - when 93C.2 is invoked by either 93.8.2 or 83D.3.3.1, which do not state a value for beta This creates an incorrect calibration of the text, that would better be fixed.

In all other cases, beta is specified as 2.

Even if we prefer not to change existing clauses, It would be better to use a correction factor in the exception, not in the normal case.

SuggestedRemedy

[Option 1]
If we agree to apply a change that would fix the incorrect calculation in clause 93 and annex 83D:
In equation 93A-46, change beta to 2, and in the paragraph above it delete "beta is 1 unless defined otherwise for the Physical Layer specification that invokes this method"

Remove beta from all references to this equation (in clauses 110, 111, and in clauses of new amendments that are added to this revision).

[Option 2]
If we keep the clause 93 and annex 83D calculation unchanged:
Change "beta is 1 unless defined otherwise for the Physical Layer specification that invokes this method" to "beta is 2 unless defined otherwise for the Physical Layer specification that invokes this method", and add exceptions to use beta=1 in 83D.3.3.1 and in 93.8.2.3.

Remove beta from the other references to this equation (in clauses 110, 111, and in clauses of new amendments that are added to this revision).

Proposed Response *Response Status* **W**

PROPOSED ACCEPT IN PRINCIPLE.

Equation (93A-46) incorrect in IEEE Std 802.3-2015. The amendment IEEE Std 802.3by-2016 added the term <beta> to correct this error without altering the Clause 92, Clause 93, or Annex 83D requirements. For these clauses, Equation (93A-46) is only used for the calibration of the broadband noise amplitude applied during interference tolerance testing. For this application, setting <beta> = 1 is equivalent to reducing the rise/fall time parameter T_r by a factor of 1/sqrt(2). This more likely than not results in a higher calibrated broadband noise amplitude. Therefore, it is likely that correcting the equation will have no impact on the compliance of devices deployed in the field.

In 93A.2, remove the following phrase from the end of the fifth paragraph.
"...and <beta> is 1 unless defined otherwise for the Physical Layer specification that invokes this method."

In Equation (93A-46), change "<beta>" to "2".

Equation (92-22) copied the original Equation (93A-46) and inherited the same error. Change Equation (92-22) to add "2" between the minus sign and the open bracket of the squared term (i.e., "exp(-2(<pi>f.").

In Section 7, 110.8.4.2.3, remove the phrase "<beta> is 2 and" from the second sentence of item d).

In Section 7, 110.10.7, remove the phrase "and <beta> is 2" from the second sentence of the first paragraph.

In Section 7, 111.8.3.1, change the second sentence of item c) to the following.
"The filtered voltage transfer function H(k)(f) calculated in Equation (93A-19) uses the filter Ht(f) defined by Equation (93A-46) where Tr is calculated as Tr = 1.09 x Trm - 4.32 ps and Trm is the measured 20% to 80% transition time of the signal at TP0a."

In Section 7, 111.9, remove the phrase "and <beta> is 2" from the second sentence of the first paragraph.

Comment Type **T** *Comment Status* **D**

IEC 61280-1-3 (2010) is sufficient and we should use only international standards where they are available and adequate. IEC 61280-1-3 (2010) has a measurement definition for SMSR, and anyway, "TIA/EIA-455-127-A" would be "TIA-455-127-A".

SuggestedRemedy

Delete "TIA/EIA-455-127-A or" here (and TIA-455-127-A in the PICS 87.13.4.5).
Change subclause title from "Wavelength" to "Wavelength and sidemode suppression ratio (SMSR)". Add new second sentence "The sidemode suppression ratio (SMSR) of each optical lane shall be within the limits given in Table 87-7 if measured according to IEC 61280-1-3." Add PICS if wished (redundant with 87.13.4.3, 87.13.4.4).
Similarly in clauses 88, 89 and other maintained clauses with SMSR specs such as 52.

Proposed Response *Response Status* **W**

PROPOSED ACCEPT IN PRINCIPLE.

The methods defined for measuring RMS spectral width in 7.2 of TIA-455-127-A-2006 and 8.5 of IEC 61280-1-3:2010 are essentially the same.
The method defined for measuring "Center (Mean) Wavelength" in 7.1 of TIA-455-127-A-2006 is essentially the same as that for measuring "Centroidal wavelength" in 8.3 of IEC 61280-1-3:2010. However, IEC 61280-1-3:2010 also contains 8.2 "Centre wavelength", which has two subclauses 8.2.2 "Continuous LED spectra" and 8.2.2 "Discrete MLM spectra". The method for measuring center wavelength for MLM lasers in 8.2.2 is different from that for measuring center wavelength in the TIA document and involves drawing lines between the tips of adjacent modes and another line 3 dB below the top of the largest mode and finding the wavelength mid way between the furthest points where these lines cross each other.

There is a note at the end of 1.3 that says "NOTE-Local and national standards such as those supported by ANSI, EIA, MIL, NFPA, and UL are not a formal part of this standard except where no international standard equivalent exists."

Also, although several optical PMD clauses contain requirements for SMSR, none of them define it or state how to measure it.

In 38.6.1, 38.12.4.5 OR2, 58.7.2, 58.10.3.5 OM3, 59.7.2, 59.10.3.5 OM3, 86.8.4.1, and 86.11.4.4 SOM2:
change "TIA-455-127-A" to "the centroidal wavelength and RMS spectral width definitions in IEC 61280-1-3"

In 86.8.4.1, change "The wavelength of each optical lane" to "The wavelength and spectral width of each optical lane"
In 86.11.4.4 SOM2 change "Center wavelength" to "Center wavelength and spectral width"

Since the center wavelength measurement method in TIA-455-127-A-2006 is contained in IEC 61280-1-3:2010, in 87.8.3, 88.8.2, 88.12.4.5 COM2, 89.7.3, 95.8.2, 95.12.4.4 COM2,

112.7.2, and 112.11.4.4 COM2:
delete "TIA/EIA-455-127-A or"

In 87.13.4.5 XLOM2 and 89.11.4.4 XLOM2:
delete "TIA-455-127-A or"

In 52.9.2
change the subclause title to "Center wavelength, spectral width, and side mode suppression ratio (SMSR) measurements"
change "The center wavelength and spectral width (RMS) shall" to "The center wavelength, spectral width (RMS), and SMSR shall"
change "TIA-455-127-A" to "the centroidal wavelength, RMS spectral width, and SMSR definitions in IEC 61280-1-3"
Replace the em-dash with a cross-reference to this subclause from the "Test-pattern definitions and related subclauses" table SMSR row, Related subclause column.

In 52.15.3.9 OM2
change "Center wavelength and spectral width measurement" to "Center wavelength, spectral width, and SMSR measurement
change "TIA-455-127-A" to "the centroidal wavelength, RMS spectral width, and SMSR definitions in IEC 61280-1-3"

In 60.9.2
change the subclause title to "Wavelength, spectral width, and side mode suppression ratio (SMSR) measurements"
change "The wavelength and spectral width (RMS) shall meet specifications according to TIA-455-127-A" to "The wavelength, spectral width (RMS), and SMSR shall meet specifications according to the centroidal wavelength, RMS spectral width, and SMSR definitions in IEC 61280-1-3"

In 60.12.4.10 OM2 and 75.10.4.17 OM2
change "Wavelength and spectral width" to "Wavelength, spectral width, and SMSR"
change "TIA-455-127-A" to "the centroidal wavelength, RMS spectral width, and SMSR definitions in IEC 61280-1-3"

In 75.7.4
change the subclause title to "Wavelength, spectral width, and side mode suppression ratio (SMSR) measurement"
change "The center wavelength and spectral width (RMS) shall meet the specifications when measured according to TIA-455-127-A" to "The center wavelength, spectral width (RMS), and SMSR shall meet the specifications when measured according to the centroidal wavelength, RMS spectral width, and SMSR definitions in IEC 61280-1-3"
Replace the em-dash with a cross-reference to this subclause from Table 75-12 "Test-patterns" SMSR row, Related subclause column.

In 87.8.3, 88.8.2, 89.7.3
change the subclause title to "Wavelength and side mode suppression ratio (SMSR)"
in the text change "wavelength" to "wavelength and SMSR"
Replace the em-dash with a cross-reference to this subclause from the "Test-pattern definitions and related subclauses" table SMSR row, Related subclause column.

In 87.13.4.5 XLOM2, 88.12.4.5 COM2, and 89.11.4.4 XLOM2:
change "Center wavelength" to "Center wavelength and SMSR"

100GBASE-KP4's time has passed.

SuggestedRemedy

Deprecate Clause 94 with the usual wording: NOTE--This PHY is not recommended for new installations. Since xxx 201x, maintenance changes are no longer being considered for this clause.

Proposed Response *Response Status* **W**

PROPOSED REJECT.

100GBASE-KP4 (Clause 94) was part of amendment IEEE Std 802.3bj-2014. As this was published just 3 years ago, it seems premature to "deprecate" the clause. This can be reconsidered in future revisions.

Cl **93A** SC **93A.1** P **687** L **32** # 132

Dawe, Piers — Mellanox Technologies

Comment Type **T** *Comment Status* **D**

The parameter called "Continuous time filter, zero frequency f_z" causes confusion because it isn't a zero frequency except when g_DC is zero, when it isn't interesting. Unlike "Continuous time filter, pole frequencies fp_1 fp_2" which really are pole frequencies. See Eq 93A-22. Further, the value of f_z in each COM table is the same as f_p1 in the same table.

SuggestedRemedy

If we might use f_z in a future specification, rename it to "Continuous time filter, zero parameter f_z0" in each COM table and Eq 93A-22. If that is not likely, remove the rows in the COM tables, and change f_z to f_p1 in Eq 93A-22.

Proposed Response *Response Status* **W**

PROPOSED ACCEPT IN PRINCIPLE.

It is true that, based on Equation (93A-22), the effective zero frequency is not f_z but rather f_z*10^(g_DC/20).

It is impossible to know whether or not f_z will equal f_p1 for all future specifications. Rather than set f_z to f_p1 and impose this as a constraint, change the name of f_z to be "Continuous time filter, zero frequency for g_DC = 0" in Table 93-8, Table 94-17, Table 83D-6, Table 93A-1, Table 110-11, and Table 111-8.

Should some of the improvements that 802.3by made be taken back to clauses 92 and 93?

SuggestedRemedy

Proposed Response *Response Status* **W**

PROPOSED REJECT.

There is no suggested remedy. The comment resolution group cannot understand the specific changes that would satisfy the commenter.

Cl **92** *SC* **92.8.4.4** *P* **429** *L* **17** # 135

Dawe, Piers — Mellanox Technologies

Comment Type **T** *Comment Status* **D** *ritt_target*

The text in 92.8.4.4.3 says "... should be set to the value that results in the COM value given in Table 92-8 when calculated". So these table entries for COM are reference or target values for setting up the test, like most of the other entries in this table. They can't be maxima (allowing any lower value) because then any receiver could be made to fail, however good it is.

SuggestedRemedy

Delete "(max)" from after "COM". Add it after "RS-FEC symbol error ratio"

Proposed Response *Response Status* **W**

PROPOSED ACCEPT IN PRINCIPLE.

Implement the suggested remedy. In addition, add the following table footnote to the "COM" parameter label.

"The COM value is the target for the far-end aggressor amplitude calibration defined in 92.8.4.4.3 step d). The far-end aggressor amplitude should be as close as practical to the value needed to produce the target COM. Higher amplitude values may be used to demonstrate margin to the specification but are not required for compliance."

Cl **93** *SC* **93.8.2.3** *P* **474** *L* **41** # 136

Dawe, Piers — Mellanox Technologies

Comment Type **T** *Comment Status* **D** *ritt_target*

The text in 93C.2 items 7 and 8 say "determine the receiver noise level, sigma_bn, required to achieve the COM value specified in the PMD clause that invokes this method" and "adjust it so that it equals sigma_bn determined in step 7.". So these table entries for COM are reference or target values for setting up the test. They can't be maxima (allowing any lower value) because then any receiver could be made to fail, however good it is. Table 83D-5 has got it right.

SuggestedRemedy

Show that they are not maxima, e.g. by straddling the min and max columns or using a "Target" columns. Similarly for tables 110-6, 110-7, 110-8, 111-4, 111-5, 111-6 and 94-15.

Proposed Response *Response Status* **W**

PROPOSED ACCEPT IN PRINCIPLE.

The addition of a "target" column would increase the table size and this is not desirable for the larger tables (e.g., Table 93-6). Therefore, the option of "straddling" the "Min" and "Max" columns is preferred even though this will be inconsistent with the format of Table 83D-5.

In Table 93-6, Table 111-4, and Table 111-5, straddle the "Min" and "Max" columns for the "COM" row and place the contents of the "Max" column into the straddled column. Add the following table footnote to the "COM" parameter label.

"The COM value is the target for the receiver noise level calibration defined in 93C.2 step 7. The channel noise voltage applied in 93C.2 step 8 should be as close as practical to the value needed to produce the target COM. Higher noise voltage values may be used to demonstrate margin to the specification but are not required for compliance."

The format of Table 94-15 must be modified prior to straddling the "Min" and "Max" columns for COM.
1. Remove "Test channel parameters:" line and define "COM, .", "Insertion loss .", and "RSS_DFE4" as separate rows.
2. Organize "a0", "a1", "a2", "a3" into its own row inserting the line "Fitted insertion loss coefficients:" at the top. Move table footnote "c" to this new line.
3. Add ruling to visually separate the rows.

These changes are expected to make the table easier to parse when the "Min" and "Max" columns of the "COM" row are straddled. Apply the same changes to the modified table that were specified for Table 93-6 et al.

In Table 110-6, Table 110-7, and Table 110-8, straddle the "Min" and "Max" columns for the "COM" row and place the contents of the "Max" column into the straddled column. Add the following table footnote to the "COM" parameter label.

"The COM value is the target value for the SNR_TX calibration defined in 110.8.4.2.3 item

f). The SNR_TX value measured at the Tx test reference should be as close as practical to the value needed to produce the target COM. Lower SNR_TX values may be used to demonstrate margin to the specification but are not required for compliance."

the PMD may set the PMD_global_transmit_disable to one

SuggestedRemedy

the PMD may set the PMD_global_transmit_disable variable to one
or
the PMD may set PMD_global_transmit_disable to one (as in 92.7.6).
Similarly in 87.5.7, 88.5.7, 89.5.6, 95.5.7, 112.5.6, 86.5.8, 88.5.8, 95.5.8.

Proposed Response *Response Status* **W**

PROPOSED ACCEPT IN PRINCIPLE.

In 86.5.7, 87.5.7, 88.5.7, 89.5.6, 95.5.7, and 112.5.6, change:
"set the PMD_global_transmit_disable to one" to:
"set the PMD_global_transmit_disable variable to one"

In 53.4.7, change:
"set the Global_PMD_transmit_disable to one" to:
"set the Global_PMD_transmit_disable variable to one"

In 84.7.7, 85.7.7, 86.5.8, 87.5.8, 88.5.8, 92.7.7, 93.7.7, 94.3.6.7, 95.5.8, change:
"set each PMD_transmit_disable_i to one" to:
"set each PMD_transmit_disable_i variable to one"

Cl **86** *SC* **86.5.8** *P* **272** *L* **50** # 141

Dawe, Piers — Mellanox Technologies

Comment Type **E** *Comment Status* **D** *bucket*

Function names don't have underscores like this (see line 1), although functional variable names do. It's not obvious to me that we have to define the function separately for each lane - it's not done in the subclause heading (line 1)

SuggestedRemedy

If we don't, change "The PMD_transmit_disable_i function (where i represents the lane number in the range 0:n-1) is" to "The PMD lane-by-lane transmit disable function is".
Insert "(where i represents the lane number in the range 0:n-1)" into the next sentence.

Proposed Response *Response Status* **W**

PROPOSED ACCEPT IN PRINCIPLE.

In 84.7.7, 85.7.7, 86.5.8, 87.5.8, 88.5.8, and 95.5.8 make the following changes:
Change "The PMD_transmit_disable_i" to "The PMD lane-by-lane transmit disable"
Move the phrase in brackets from the first sentence to requirement a) after "PMD_transmit_disable_i variable"

In the last sentence of 86.5.8, 87.5.8, 88.5.8, and 95.5.8 and also in 86.11.4.2 SM3 change:
"PMD_transmit_disable_i function" to "PMD lane-by-lane transmit disable function"

Cl **53** *SC* **53.4.7** *P* **625** *L* **6** # 142

Dawe, Piers — Mellanox Technologies

Comment Type **E** *Comment Status* **D**

53 Global PMD transmit disable function, Global transmit disable, Global_PMD_transmit_disable
86 PMD global transmit disable function, Global PMD transmit disable, PMD_global_transmit_disable
92 Global PMD transmit disable function, Global PMD transmit disable, Global_PMD_transmit_disable

SuggestedRemedy

Can the order of "PMD" and "global" be made consistent? Similarly for signal detect.

Proposed Response *Response Status* **W**

PROPOSED ACCEPT IN PRINCIPLE.

In the PMD clauses in the draft, either "PMD_global_transmit_disable" or "Global_PMD_transmit_disable" is consistently used for the variable name throughout each clause. Similarly, either "PMD_global_signal_detect" or "Global_PMD_signal_detect" is consistently used.
There are 79 instances of "Global_PMD_transmit_disable" and 50 instances of "PMD_global_transmit_disable" in the draft, so changing all PMD clauses to one or the other would cause significant disruption without much benefit.
However, in some clauses, there is inconsistency as to whether the function names have underscores. Make the minimum change to make each clause self-consistent.

In Table 53-2, Table 71-2, Table 113-9, and Table 126-6 change "Global transmit disable" to "Global PMD transmit disable" since this is the Clause 45 MDIO control variable name for bit 1.9.0.

In 54.5.4, change the heading to "Global_PMD_signal_detect function"

In 53.4.7, 54.5.6, 71.6.6, 72.6.5, 84.7.6, and 85.7.6 change the heading to "Global_PMD_transmit_disable function"

In 86.5.7, 87.5.7, 88.5.7, 89.5.6, 95.5.7, and 112.5.6 change "PMD_global_transmit_disable function" to "PMD global transmit disable function"

Healey, Adam — Broadcom Ltd.

Comment Type **T** *Comment Status* **D**

This comment is submitted on behalf of Michelle Turner, Managing Editor, IEEE-SA.

Must or shall is used in NOTES (which are considered informative). Please note "shall" should not be used in informative notes. Please consider changing the verb to when necessary. I have also highlighted the areas when must is used. Typically "must" states a mandatory requirement and in many instances we will change "must" to shall during publication prep. With that being said-- we don't want to do that since it is in a NOTE. Please see the instances below. I've also provided a few recommendations as an example. I tried to avoid changing the verb to "should" or "may."

List of instances and recommendations are included in an attachment.

SuggestedRemedy

Modify notes to remove the use of "must" or "shall" as appropriate.

Proposed Response *Response Status* **W**

PROPOSED ACCEPT IN PRINCIPLE.

Implement the changes described in <http://www.ieee802.org/3/maint/public/healey_2_0917.pdf>. Note that no changes are made to clauses that are "recommended to no be used in new installations" and for which "maintenance changes are no longer being accepted."

Comment Type **T** *Comment Status* **D** *late*

Figure 98-8 has several typos. On 4 transitions (5 places) an OR (+) is indicated for state transitions when the condition should be an AND (*) - line 8, 14,21 (&22) and line 28. Clause 98 is based on Clause 73. There are some important differences but figure 73-9 shows the expected behavior for the state transitions that are common between them. (see figures attached as zimmerman_3cj_01_0817.pdf showing Figures 73-9 and 98-8). On 4 transition branches, "*" (AND) operators, appear to have been replaced with "+" (OR) operators.

I can only conclude this was a typo made on the implementation of comment 316 going from Draft 2.0 to Draft 2.1, which remained uncaught, for the following reasons:
1. The original contribution that proposed the state diagram had these as "*" (mcclellan_3bp_03_1114_%20Autoneg_baseline_text_proposal_v0p4.pdf, page 25)
2. The proposal was implemented as "*" in draft 1.1 (the first place this showed up): (see e.g., page 88 of D1.1), through d 2.0, but change in D 2.1 when the figure was redrawn based on comment 316 to change the font size, and were unchanged since then.
3. There are no comments on draft 2.0 to change the logic of the transitions on Figure 98-8, or in connection with these variables, based on an electronic search of the D2.0 comment resolution report.

SuggestedRemedy

Line 8: Change "transmit_mv_end_done + remaining_ack_cnt = done" to "transmit_mv_end_done * remaining_ack_cnt = done" on transition from TRANSMIT DELIMITER TAIL to WAIT 1)
Line 14: Change "complete_ack = true + transmit_mv_start_done" to "complete_ack = true * transmit_mv_start_done" on transition from TRANSMIT DELIMITER HEAD to TRANSMIT REMAINING ACKNOWLEDGE
Lines 22 & 23 (2 instances): Change "complete_ack = false + transmit_ability = true + transmit_mv_start_done" to "complete_ack = false * transmit_ability = true * transmit_mv_start_done" on transition from TRANSMIT DELIMITER HEAD to TRANSMIT ABILITY
Line 27: Change "transmit_mv_end_done + remaining_ack_cnt = not_done" to "transmit_mv_end_done * remaining_ack_cnt = not_done" on transition from TRANSMIT DELIMITER TAIL to WAIT 2.
