Purpose

- **Test Points**
- **Test Fixture Considerations**
 - **Use 802.3cy Channel PCB IL and connector IL assumptions to formulate 802.3cy test fixture IL**
 - **Test fixtures specified in a mated state**

Background – Test Points

Background – 802.3bj/by/cd/ck

- The channel is defined between the transmitter and receiver blocks to include the transmitter and receiver differential controlled impedance printed circuit board and the cable assembly (link segment).
- Test points provide specification references for channel and cable assembly and RX and TX
- Test fixtures enable testing at test points – module compliance board (MCB); host compliance board (HCB)

| Test points | Description |
|--------------------------|---|
| TP0 to TP5 | The 100GBASE-CR4 channel including the transmitter and receiver differential controlled impedance printed circuit board insertion loss and the cable assembly insertion loss. |
| TP1 to TP4 | All cable assembly measurements are to be made between TP1 and TP4 as illustrated in Figure 92-2. The cable assembly test fixture of Figure 92-17 or its equivalent, is required for measuring the cable assembly specifications in 92.10 at TP1 and TP4. |
| TP0 to TP2 TP3 to TP5 | A mated connector pair has been included in both the transmitter and receiver specifications defined in 92.8.3 and 92.8.4. The recommended maximum insertion loss from TP0 to TP2 or TP3 to TP5 including the test fixture is specified in 92.8.3.6. |
| TP2 | Unless specified otherwise, all transmitter measurements defined in Table 92-6 are made at TP2 utilizing the test fixture specified in 92.11.1. |
| TP3 | Unless specified otherwise, all receiver measurements and tests defined in 92.8.4 are made at TP3 utilizing the test fixture specified in 92.11.1. |
