Alibaba DC Networks

- Typical data center has 5 buildings, with link distance between buildings < 1km
- Each building has 4-5 stories, with link distance within a building $\leq 80\text{m}$

100G (4 x 25G) Networks

- Server – TOR
 - AOC: MM ($\leq 30\text{m}$)
 - DAC ($\leq 5\text{m}$)
- TOR – Aggregation
 - 100G SR4
- Aggregation – Core
 - Mixed 100G SR4 / 100G CWDM4
 - Use 100G SR4 if link length $\leq 100\text{m}$

200G (4 x 50G) & 400G (8 x 50G) Networks

- Server – TOR
 - AOC: MM ($\leq 30\text{m}$)
 - DAC ($\leq 5\text{m}$)
- TOR – Aggregation
 - 200G SR4 (200G networks)
 - 400G SR8 (400G networks)
- Aggregation – Core
 - Mixed 200G SR4 / 200G FR4 (200G networks)
 - Mixed 400G SR8 / 400G DR4 (400G networks)

400G (4 x 100G) Networks

- If MM reaches 30 m
 - Can be used as AOC (server – TOR)
- If MM reaches 50 m
 - Can be used TOR – Aggregation
- If reaches 80 m
 - Can be used within a building
- If reaches 100 m
 - Can be used the same way as 100G networks

THANKS
