In Section 7, "MAC Merge sublayer" appears 54 times and "MAC Merge function" does not appear at all.

SuggestedRemedy

Follow the established terminology; change "MAC Merge function" to "MAC Merge sublayer" in three places.

Response　　　　　*Response Status* **W**

ACCEPT IN PRINCIPLE.
Change "MAC Merge function" to "MAC Merge sublayer" in the Abstract on page 3.

Leave it as "MAC Merge function" on pages 1 and 10, to align with the PAR Scope in 5.2b.

"MAC Merge function" is the terminology used in the PAR, and the purpose of the amendment needs to match the PAR in the description of the amendment on page 1 and in the frontmatter. This difference was discussed when the PAR was written, and the "function" is what we specify - the "sublayer" is the mechanism we specify that function in. For the text on page 1 and the description, "function" is correct, while the abstract defines what specifications actually changed (not why it was changed) and therefore the change to sublayer is appropriate there.

Cl **FM**　　*SC* **FM**　　　　　　*P* **1**　　　*L* **30**　　　# **7**

Dawe, Piers　　　　　　　　　Nvidia

Comment Type **E**　　*Comment Status* **R**　　　　　*PAR scope*

Here, MAC Merge and TSSI support PHYs while on page 10, PHYs support MAC Merge TSSI. It can't be both ways round. The floor supports the table, the table doesn't support the floor.

SuggestedRemedy

Preferably, use better words than "support". The text here could be:
"... MAC Merge function and the Time Synchronization Service Interface (TSSI) for use with/on/over 10 Mb/s Single-Pair Ethernet point to point PHYs".
Similarly in the abstract on page 3.
The description of 802.3de on page 10 could be:
"... PHYs compatible with the MAC Merge function and the Time Synchronization Service Interface (TSSI)."
Also: shouldn't the abstract and the description be very similar?

Response　　　　　*Response Status* **C**

REJECT.
The CRG disagrees with the commenter.
The purpose text is aligned with the scope of the PAR (5.2b). In the physical devices, the PHYs support the specification, which aligns with the PAR scope as well, and is clear. Changing the description text in the frontmatter is unneeded for clarity would cause unnecessary churn in subsequent amendments already in process.

Comment Type **T**   *Comment Status* **R**   *Half-Duplex*

I am not sure whether the effect of collisions & retransmissions of fragments is considered in Receive Processing state diagram; For example, in Figure 99-6, in state P_RECEIVE_DATA, if the incoming continuation fragment is terminated due to collision (!RX_MCRC_OK & !rRxDx), the state transitions to FRAME_COMPLETE. When the remote station retransmits the continuation fragment, it will be declared as a BAD_FRAG; Is this intended?

SuggestedRemedy

Receive Processing to be updated for handling of collisions/retransmission of fragments in half-duplex mode

Response   *Response Status* **C**

REJECT.
(from comment i-59)
Insert Editor's note at P14 L18:
Editor's Note (to be resolved prior to close of WG ballot) - Issues have been raised with regards to the need for additional changes in Transmit and Receive Processing for 10BASE-T1S point-to-point half duplex (other half-duplex PHYs being out of project scope). See comments i-58 and i-59 for more detail. Comments do not provide sufficient detail to resolve. Presentations and further comments to with specific changes to resolve issues are solicited.

Kabra, Lokesh   Synopsys Inc

Comment Type **T**   *Comment Status* **R**   *Half-Duplex*

Similarly, impact of ollisions/retransmission of fragments in not fully considered/explained in Transmit Processing. For example, if collision occurs during transmission of preemptable fragment, then Transmit processing remains in PREEMPTABLE_TX state because pTxCplt = FALSE. In such a case, express packet will remain in queue and gets delayed until teh retransmission of the fragment is compete after the random back-off. Is this intended?

SuggestedRemedy

Transmit Processing to be updated for handling of collisions/retransmission of fragments in half-duplex mode

Response   *Response Status* **C**

REJECT.

ACCEPT IN PRINCIPLE.
Accomodated by comment #34
Response to comment #34 is ACCEPT:
(Add 99.5.3.1 Functional specifications PICS table to draft, inserting new PICS items, with
editing instruction and inserts:
Insert new rows for PICS items MM11a and MM13a as shown (unchanged rows not shown):

"MM11a,
 Feature = Receive processing PLS_SIGNAL.indication, Section = 99.4.5, Value/Comment
= If PLS_SIGNAL.indication is received, indication with the same SIGNAL_STATUS is sent
to the pMAC.
Status = M
Support = Yes [ ]"
"MM13a,
 Feature = Express filter processing PLS_SIGNAL.indication, Section = 99.4.6,
Value/Comment = If PLS_SIGNAL.indication is received, indication with the same
SIGNAL_STATUS is sent to the eMAC.
Status = M
Support = Yes [ ]")

The edited text is included in P802.3/D3.0 in response to Maintenance request #1344.
(Maintenance change approved during P802.3 WG ballot.)

SuggestedRemedy

Delete lines 27-34, optionally include an editor's note indicating changes included in
previous drafts were deleted as the changes were approved in P802.3 WG ballot and are
now included in P802.3/D3.0.

Response   *Response Status* **C**

ACCEPT IN PRINCIPLE.
The text in 99.4.6 in the base standard does not include this change. Perhaps the
commenter was referring to the change in 99.1 to the note in Figure 99-1, which is included
in 802.3/D3.0 and is covered by other comments.
