“The PCS service interface is the 800GMII in Clause 170”
(twice, line 47 and line 50)

Similar references to xGMII clauses in the base document use the word “defined”. For
example see 149.3.1.

SuggestedRemedy
Change to “The PCS service interface is the 800GMII defined in Clause 170”, twice.

Proposed Response  Response Status  W  PROPOSED ACCEPT IN PRINCIPLE.

Adding the word “defined” is a good change. However, it is not necessary to say “defined
in Clause 170” twice in consecutive sentences.

Change the two sentences to the following:
“When the client sublayer is the Reconciliation Sublayer, the PCS service interface is the
800GMII defined in Clause 170.
When the client sublayer is the PHY 800GXS, the PCS service interface is the 800GMII
with additional signals TXRD, TXLD, RXRD, RXLD and PCS_status.”

Ran, Adee  Cisco Systems, Inc.

Comment Type  E  Comment Status  D  (bucket)
“The TXRD and TXLD status signals indicate...”

These are not referred to as “status signals” elsewhere. The subsequent two paragraphs
describe RXRD and RXLD without the word “status”.

The last paragraph has “The PCS_status signal indicates...” but in this case “status” is part
of the signal name - this adds confusion.

SuggestedRemedy
Change to “The TXRD and TXLD signals indicate...”

Proposed Response  Response Status  W  PROPOSED ACCEPT.
Comment Type | T | Comment Status | D (bucket)
---|---|---|---
"tx_am_sfl<2:0> = (FEC_degraded_SER + rx_local_degraded,0,0)"

The "+" sign apparently means logical-or here, but it is used in two other places in this subclause and in Figure 172–3 with the meaning of numerical addition. It can also be interpreted as addition modulo 2 (XOR) as used in other contexts.

The text should be made unambiguous.

Also applies to 171.6.1, although there are no additional + signs there.

Suggested Remedy
Add "and + denotes logical OR" after "where FEC_degraded_SER and rx_local_degraded are defined in 172.2.6.2.2."

Add a similar statement in 171.6.1, including references to the variable definitions in 172.2.6.2.2.

Proposed Response | Response Status | W
---|---|---
PROPOSED ACCEPT IN PRINCIPLE.
In 172.2.6.2.2...
Change "where FEC_degraded_SER and rx_local_degraded are defined in 172.2.6.2.2."
To "where FEC_degraded_SER and rx_local_degraded are defined in 172.2.6.2.2 and + denotes logical OR"
In 171.6.1, add the following statement:
"where FEC_degraded_SER and rx_local_degraded are defined in 172.2.6.2.2 and + denotes logical OR"
after tx_am_sfl<2:0> = {FEC_degraded_SER + rx_local_degraded,0,0}
Implement with editorial license.

Comment Type | T | Comment Status | D (bucket)
---|---|---|---
"Within a flow, the data from the 16 PCS lanes is de-interleaved to reconstruct the original two streams of FEC codewords"

The similar statement in 119.2.5.2 is "the two FEC codewords are de-interleaved to reconstruct the original stream of two FEC codewords". And indeed this is a single stream of (pairs of) codewords, not two (independent) streams, that should be reconstructed.

The wording of 119.2.5.2 may be improved by changing "the original stream of two FEC codewords" to "the original stream of FEC codewords", or alternatively "of FEC codeword pairs" if the CRG prefers.

Suggested Remedy
Change "Within a flow, the data from the 16 PCS lanes is de-interleaved to reconstruct the original two streams of FEC codewords"
to "Within a flow, the data from the 16 PCS lanes is de-interleaved to reconstruct the original stream of FEC codewords".

Proposed Response | Response Status | W
---|---|---
PROPOSED REJECT.
The text is accurate as written. The data is broken into two streams, one for each FEC decoder.
IEEE P802.3df D3.1 1st Sponsor recirculation ballot comments

Comment on IEEE P802.3df D3.1

Comment ID: R1-25

Ran, Adee
Cisco Systems, Inc.

Comment Type: T
Comment Status: D

"The 8:32 and 8:8 PMAs may optionally provide signal status information to the PMA client by disabling (squelching) one or more of the PAM4 symbol streams sent to the PMA client (PMA:IS_UNITDATA_0:7.indication), see 173.5.8.2 and 173.5.8.3"

This sentence is technically inaccurate - it is the output lane (AUI transmitter) that is squelched, not the PAM4 symbol streams; a squelched transmitter does not correspond to any PAM4 symbol stream. Indeed, the text in 173.5.8.2 and 173.5.8.3 uses different wording.

It is also is not directly related to the subject of this subclause, PMA service interface. Since signal detect is defined in other subclauses, this level of detail is not necessary here.

Similarly for the 4th paragraph in 173.3.

Suggested Remedy

In 173.2, change the quoted sentence to
"The 8:32 and 8:8 PMAs may optionally provide signal status information to the PMA client as described in 173.5.8.2 and 173.5.8.3" and make it a separate paragraph.

In the 4th paragraph of 173.3, change
"the 8:8 PMA may optionally provide signal status information by disabling (squelching) one or more of the PAM4 symbol streams sent to the sublayer below via PMA:IS_UNITDATA_0:7.request (see 173.5.8.3)"

to
"the 8:8 PMA may optionally provide signal status information to the sublayer below as described in 173.5.8.3".

Proposed Response

PROPOSED ACCEPT IN PRINCIPLE.

In Clause 173.2...

Change "The 8:32 and 8:8 PMAs may optionally provide signal status information to the PMA client by disabling (squelching) one or more of the PAM4 symbol streams sent to the PMA client (PMA:IS_UNITDATA_0:7.indication), see 173.5.8.2 and 173.5.8.3."
The 8:32 and 8:8 PMAs may optionally provide signal status information to the PMA client as described in 173.5.8.2 and 173.5.8.3

And make this a new paragraph.

In Clause 173.3...

Change "For the 8:8 PMA, if the sublayer below the PMA is another PMA, the 8:8 PMA may optionally provide signal status information by disabling (squelching) one or more of the PAM4 symbol streams sent to the sublayer below via PMA:IS_UNITDATA_0:7.request (see 173.5.8.3)."

Proposed Response

PROPOSED ACCEPT.

The PHY type 400GBASE-DR4-2 introduced by this amendment is not listed in clause 116.

The following seem to require updates:
116.1.2: item h
116.1.3: Table 116-2
116.1.4: Table 116-5

Suggested Remedy

Add Clause 116 into the amendment and add 400GBASE-DR4-2 in the locations listed in
the comment, and elsewhere if required.

Proposed Response  Response Status  W  (bucket)

PROPOSED ACCEPT IN PRINCIPLE.

Clause 116 was in Draft 3.0 with the suggested amendments. However, Clause 116 was
inadvertently deleted from the FrameMaker book for D3.1.

Reinstate Clause 116 as it was in D3.0.

CI 171  SC 171.6  P201  L21  #  [R1-34]
Dawe, Piers J G  NVIDIA

Comment Type  T  Comment Status  D  (bucket)

The FEC degrade feature doesn't propagate FEC degrade conditions. It signals or reports
them, and sometimes in the opposite direction, so the first "propagate" doesn't work. Is
"all" telling us something (what?) or is it a rhetorical flourish? If the feature is present, it
reports a lack of FEC degrade (nothing untoward detected) too.

Suggested Remedy

Change the first sentence from "The FEC degrade feature provides the ability to detect
degrade conditions at the RS-FEC decoder using FEC degrade detection and to propagate
all detected FEC degrade conditions using FEC degrade signaling. * to "The FEC degrade
feature provides the ability to detect degrade conditions at the RS-FEC decoder using FEC
degrade detection and to report FEC degrade conditions using FEC degrade signaling.*
If "all" is intentional, change it to "report all three possible types of FEC degrade condition".

Same in 172.1.4.

Proposed Response  Response Status  W  (bucket)

PROPOSED REJECT.

The word propagate here is referring to passing the detected FEC degrade condition
through multiple sublayers.
The text correctly describes the specified behavior and intent.

Proposed Response  Response Status  W  (bucket)

PROPOSED ACCEPT.
### Comment ID: R1-39

**Comment Type:** TR  **Comment Status:** D

Experience with Annex 172A shows us how valuable it is. But more complexity follows: twice "Mux and 10-bit symbol distribution" as in 119.2.4.8 Figure 119-11 (with an order reversal that doesn't seem to be mentioned in the text), then 32:8 bit mux as in 173.5.2.1 where the two flows get interleaved, which is a new thing and worth an example.

**Suggested Remedy**
- Show some of the 16+16-lane output of the PCS for these cxA and cxB. It may be enough to show e.g. the beginnings of lanes 1 and 31, enough to include some differences between four codewords.
- Also show some of the 8-lane output of an 32:8 bit mux from that (which could go in a NOTE in 173). Again, showing a couple of lanes would be enough to resolve most or all misinterpretations or ambiguities. Add a cross-reference from here.

**Proposed Response**
- PROPOSED REJECT.

The example patterns are provided to help the implementer confirm correct interpretation of the encoding functionality which is complex. Whereas the 10-bit symbol multiplexing is easy to interpret correctly. Therefore adding the suggested additional patterns is not necessary.

### Comment ID: R1-41

**Comment Type:** E  **Comment Status:** D

**Suggested Remedy**
- Change the three "N/A" to approx 11, 202, 213.
- This should be done in Table 116-9 also, and a 53.125 GBd column should be added to Table 80-9 (both out of scope).

**Proposed Response**
- PROPOSED ACCEPT IN PRINCIPLE.

In Table 169-6 in the UI column, change the three "N/A" to 11, 202, and 213 with each value preceded by the approximation symbol like other rows in this column.

### Comment ID: R1-42

**Comment Type:** T  **Comment Status:** D

I suspect that the "N/A" here was copied from Table 116-9 and dates from a time when there were 26.5625 GBd (50G) AUIs but not 53.125 GBd AUIs. Now that there are, the missing numbers should be filled in.

**Suggested Remedy**
- Change the three N/A to approx 11, 202, 213.
- This should be done in Table 116-9 also, and a 53.125 GBd column should be added to Table 80-9 (both out of scope).

**Proposed Response**
- PROPOSED ACCEPT IN PRINCIPLE.

In Table 169-6 in the UI column, change the three "N/A" to 11, 202, and 213 with each value preceded by the approximation symbol like other rows in this column.

### Comment ID: R1-43

**Comment Type:** E  **Comment Status:** D

**Suggested Remedy**
- Removing the blank space at lines 1 and 25-26 should let the 169.6 FEC Degrade section fit on this page.

**Proposed Response**
