Outline

- **Introduction**
- PCS/FEC/PMA Baseline proposal
- Implementation considerations
- Architecture considerations
- Conclusion

Goals

- Fast time to an 800GbE PCS/FEC/PMA specification for PMDs using 100G/lane
 - Re-use 400GbE PCS/FEC (CL119) as much as possible
 - Support 800GbE with simple modification to the 400GbE PCS/FEC
 - Leverage 802.3bs Cl120 PMA; leverage 802.3ck 100G/lane PMA and AUI specifications
- Maximize the re-use of existing logic sub-blocks used in 400GbE PCS/FEC
 - Leverage industry investment in 400GbE technology
- Enable systems using current 8-lane 800G connectors (OSFP / QSFP-DD) to also support 800GbE
 - E.g. 8-lane C2M AUIs used as : 8 x 100GAUI-1 / 4 x 200GAUI-2 / 2 x 400GAUI-4 and 1 x 800GAUI-8

Scope

802.3df Adopted PHY Objectives*

Ethernet Rate	Assumed Signaling Rate	AUI	BP	Cu Cable	MMF 50m	MMF 100m	SMF 500m	SMF 2km	SMF 10km	SMF 40km
200 Gb/s	200 Gb/s	Over 1 lane		Over 1 pair			Over 1 Pair	Over 1 Pair		
400 Gb/s	200 Gb/s	Over 2 lanes		Over 2 pairs			Over 2 Pair			
800 Gb/s	100 Gb/s	Over 8 lanes	Over 8 lanes	Over 8 pairs	Over 8 pairs	Over 8 pairs	Over 8 pairs	Over 8 pairs		
	200 Gb/s	Over 4 lanes		Over 4 pairs			Over 4 pairs	1) Over 4 pairs 2) Over 4 λ's		
	TBD								Over single SMF in each direction	Over single SMF in each direction
1.6 Tb/s	100 Gb/s	Over 16 lanes								
	200 Gb/s	Over 8 lanes		Over 8 pairs			Over 8 pairs	Over 8 pairs		

Technology Reuse

Leverage existing or work-in-progress 100 Gb/s per lane (e.g. 3cu, 3ck, 3db) to higher lane counts

Develop 200 Gb/s per lane electrical signaling for 1/2/4/8 lane variants of AUIs and electrical PMDs

Develop 200 Gb/s per optical fiber for 1/2/4/8 fiber based optical PMDs and 4 lambda WDM optical PMD

Potential for either direct detect and / or coherent signaling technology

Making it all work together

Scope of this Baseline : 800GbE PCS/FEC/PMA for all PHY objectives that use 8 x 100G PMDs and AUIs

* Table from https://www.ieee802.org/3/B400G/public/21_1028/B400G_overview_c_211028.pdf

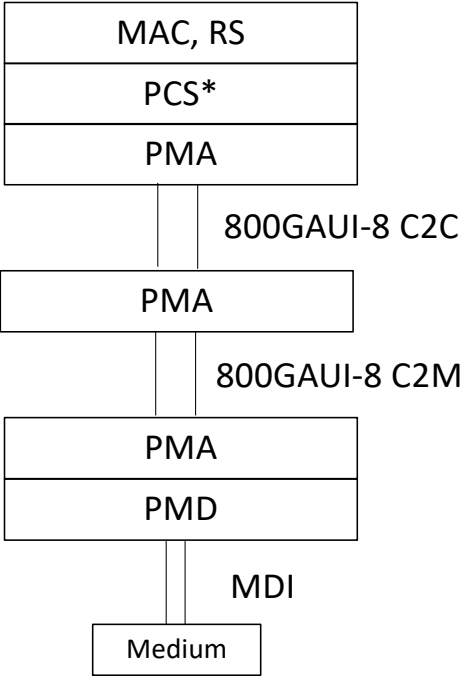

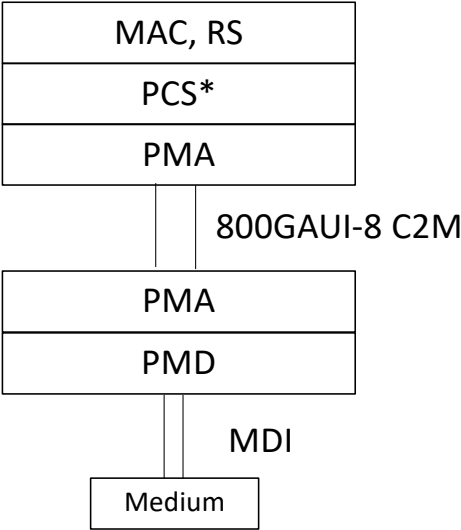

AUI and PMD assumptions

- 802.3df Task Force has adopted 800GbE 8-lane AUI baseline proposals leveraging existing 100G/lane AUI specs, drafts
 - https://www.ieee802.org/3/df/public/22_03/lusted_3df_01a_220315.pdf
- 802.3df Task Force has adopted 800GbE 8-lane PMD baseline proposals leveraging existing 100G/lane PMD specs, drafts
 - https://www.ieee802.org/3/df/public/22_03/lusted_3df_01a_220315.pdf
 - https://www.ieee802.org/3/df/public/22_02/welch_3df_01a_220222.pdf
 - https://www.ieee802.org/3/df/public/22_03/murty_3df_01a_220315.pdf
- 802.3bs CL119 PCS works for all 100G/lane AUIs and PMDs for 400GbE
- Similarly, this PCS/FEC Baseline (leveraging CL119) works for all adopted 800GbE 8-lane AUIs and PMDs

Outline

- Introduction
- **PCS/FEC/PMA Baseline proposal**
- Implementation considerations
- Architecture considerations
- Conclusion

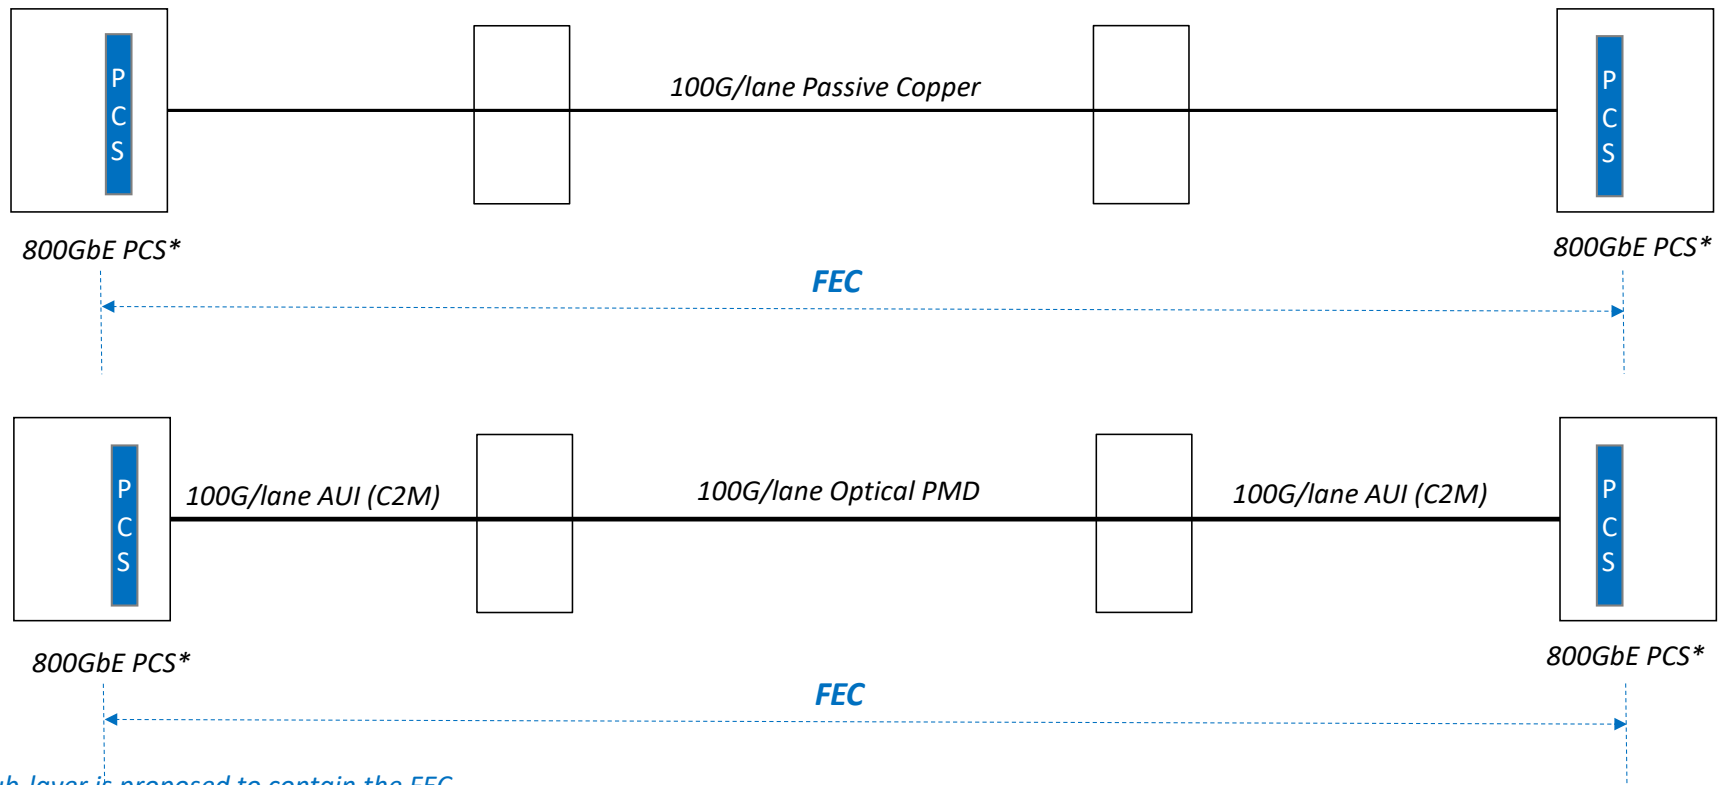

Architecture

**Update: PCS and FEC functions proposed to be located in the PCS sub-layer (same as CL119). See Logic Baseline, M. Gustlin, May'22 interim*

Note : Not showing layering diagram for Cu PMD (will be same as other Cu PMD layering diagrams in 802.3)

End-End PCS/FEC scheme for 800GbE (8 x 100G) PMDs

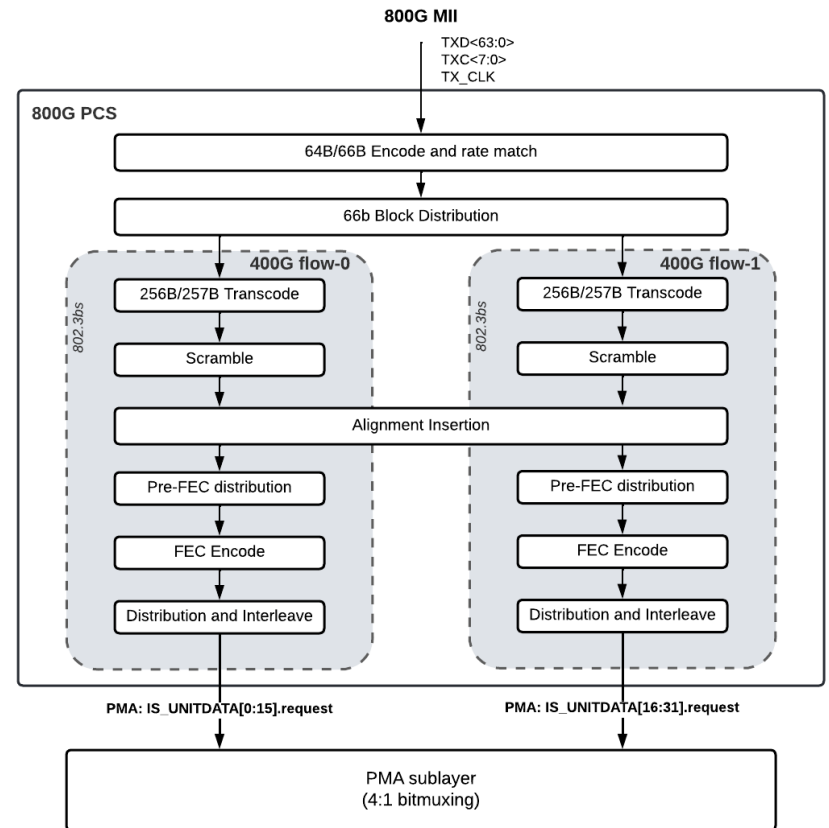

* PCS sub-layer is proposed to contain the FEC

Note : This End-End PCS/FEC works with optional Chip to Chip AUIs and a combination of Chip to chip and Chip to module (same as 400GAUI-4 in 802.3ck)

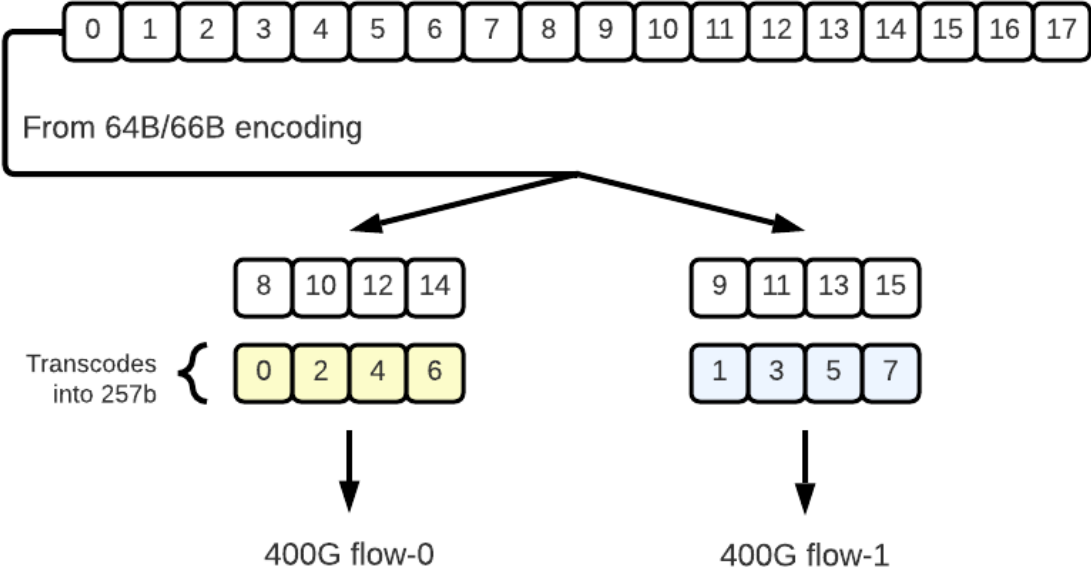

Tx PCS/FEC Data Flow

- Based on two 802.3bs, CL119 sub-layers in parallel
 - Two 400G FEC flows (flow-0 and flow-1)
- 66b round robin distribution into two 400G flows after 64B/66B encode
- Sub-blocks shown within each flow are identical to CL119, except :
 - AM values are made unique across the two flows
 - AM insertion is aligned across the two flows
- 32 PCS lanes per 800GbE PCS
 - 16 PCS lanes per 400G flow
- Any 4 PCS lanes to any PMA output lane
 - 4:1 bitmuxing

Tx 66b Block Distribution

- Round Robin among two '400G Flows'

Alignment Marker Insertion

- 802.3bs 400G AM structure
 - AM size = 8 x 257b
 - Spacing = 160k x 257b = 8192 CWs
- AM total sizing for 800G = 2x400G
 - AM size = 16 x 257b
 - Spacing = 320k x 257b = 16384 CWs
- Markers inserted at consecutive 257b blocks across both 400G flows
 - Flow-0 is first in time carrying the even encoded 4x66b blocks
 - Flow-1 carries odd encoded 4x66b blocks

Source: IEEE Std 802.3-2018

AM Marker Encoding

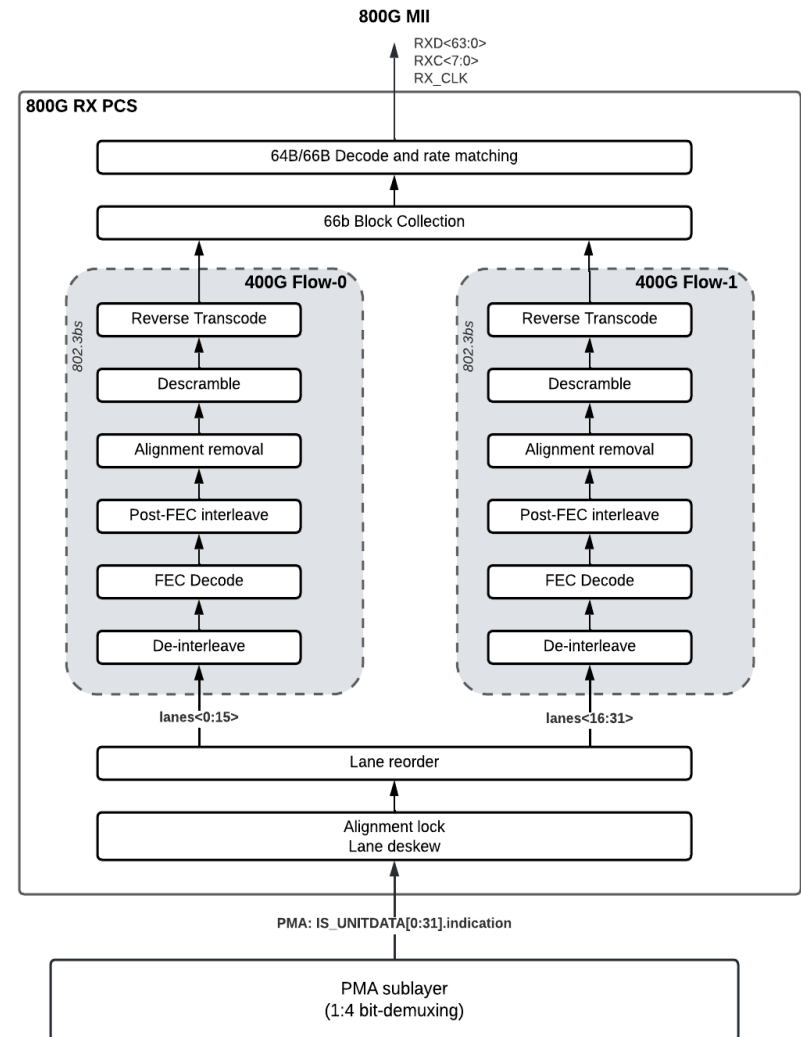

- CM0-CM5 and UP0-UP2 are unchanged from 400GbE CL119
- UM0/UM3 for PCS lanes 0-15 are inverted from 400GbE
- UM1/UM2/UM4/UM5 for PCS lanes 16-31 are inverted from 400GbE
- Prevents lock with 400GbE ports
- Maintains DC balance

PCS Lane #	Encoding

Note: in table above, bolded text indicates changes from CL 119 AM values

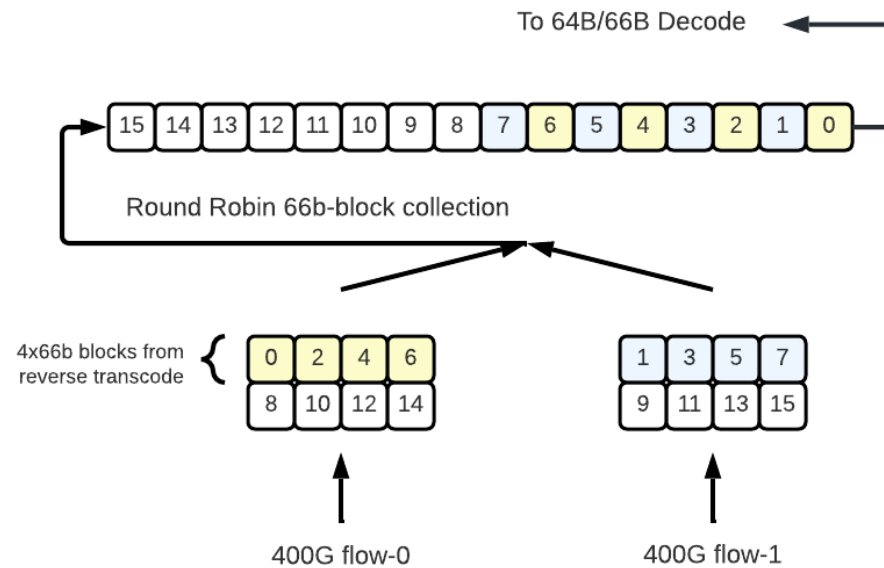

Rx PCS/FEC Data Flow

- Alignment Lock and Deskew
 - AM lock : per lane, same as CL119
 - De-skew : across 32 PCS lanes
- Lane reorder (and split)
 - Reorder and split 32 PCS lanes into 2 groups of 16
 - Lanes 0-15 : Flow-0
 - Lanes 16-31 : Flow-1
- FEC decode, de-scramble, transcode decode – same as CL119
- Round robin block collection must be aligned across Flow-0/1 based on Alignment Marker location

Rx 66b Block Collection

- Round Robin 66b Block Collection is opposite of Tx Block Distribution

Re-use CL119 State Diagrams

- Re-use all of the following
 - Figure 119–12—Alignment marker lock state diagram
 - Figure 119–13—PCS synchronization state diagram
 - Figure 119–14—Transmit state diagram
 - Figure 119–15—Receive state diagram
- Minor modification to the following
 - Add restart_lock<y> variable per 400G flow
 - restart_lock = restart_lock<0> OR restart_lock<1>
 - Add hi_ser<y> variable per 400G flow
 - hi_ser = hi_ser<0> OR hi_ser<1>

PMA

- PMA functions as defined in CL120, with latest 802.3ck updates for 100G/lane
 - Bit-multiplexing (4:1)
 - Modulation (PAM4)
 - AUI Physical lane instantiation (8 lane)
 - Signaling lane rate (106.25Gb/s)
 - Coding (Gray, precoding)
 - Clock and data recovery
 - Loopbacks
 - Test patterns
- Per lane AUI specifications from 802.3ck

PMA Muxing

- Any 32 PCS Lanes to Any 8 PMA Lanes
 - 4:1 Bit-multiplexing of data from any 4 PCS lanes to any 1 PMA lane
 - The receiver can receive PMA lanes in any order and has a full 32 lane reorder block
 - Expect Clock content to be similar to a 400GE CI119 stream
 - Further work ongoing on this

Outline

- Introduction
- PCS/FEC/PMA Baseline proposal
- **Implementation considerations**
- Architecture considerations
- Conclusion

Latency considerations

- Two 400GbE FEC encode/decode engines in parallel
- FEC latency for this baseline proposal same as 400GbE FEC latency

PCS lanes for 8 x 100G

- Many 800G implementations will support 100/200/400/800GbE Ethernet ports
 - 32 PCS lanes already exist to support 2 x 400GbE / 4 x 200GbE / 8 x 100GbE !
 - Reuse of per lane PCS alignment logic

800Gb/s Block config	PCS/FEC lanes per Ethernet port	Total PCS/FEC lanes per 800Gb/s block
1 x 800GbE port	32 lanes @ 25G	32
2 x 400GbE ports	16 lanes @ 25G	32
4 x 200GbE ports	8 lanes @ 25G	32
8 x 100GbE ports	4 lanes @ 25G	32

- Choice of 32 PCS lanes can enable implementations over 16 x 50G AUI lanes
 - If needed (e.g. test equipment)

Other Implementation Considerations

- This baseline benefits from the use of two 400GbE PCSs in parallel
 - Reuse of logic blocks from 400GbE PCS possible
 - FEC engines, transcoder, scramblers running at same bandwidth as 400GbE
 - Per lane alignment lock running at same speed as 400GbE
 - Minimizes new development and verification
- This baseline follows the approach taken by the adopted 800GbE 8-lane AUIs and PMD baselines
 - 800GbE 8-lane AUIs and PMDs are doubling number of lanes from 400GbE
 - Example 1: 800GAUI-8 is 2 x 400GAUI-4 in parallel
 - Example 2: 800GBASE-DR8 is 2 x 400GBASE-DR4 in parallel
 - Allows re-use of specifications, maximize use of technology and investment from 400GbE

Outline

- Introduction
- PCS/FEC/PMA Baseline proposal
- Implementation considerations
- **Architecture considerations**
- Conclusion

IEEE P802.3df Architecture : FEC schemes

End-to-End FEC scheme

(FEC1 used for AUIs and PMD)

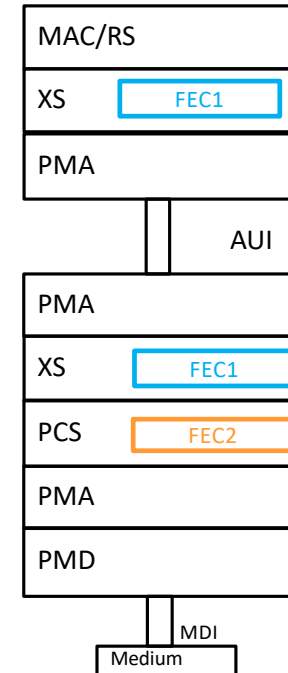

Concatenated FEC scheme

(FEC2 is added on top of FEC1.
FEC 1 for AUIs, FEC1+FEC2 for PMD)

Segmented FEC scheme

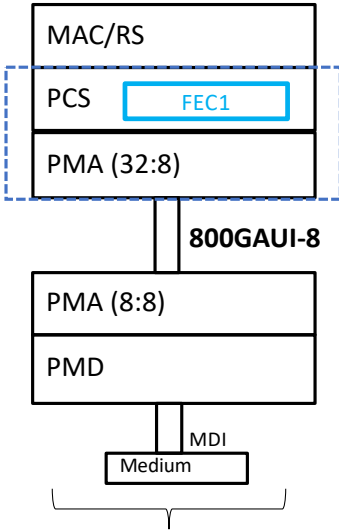

(FEC2 replaces FEC1. FEC1 used for
local AUI only. FEC2 for PMD only)

Included in this baseline

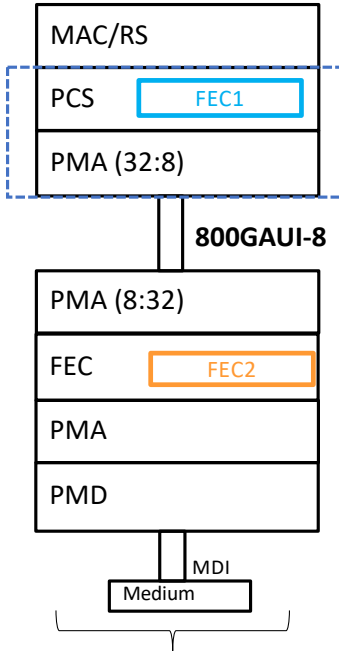

800GbE Architecture : FEC schemes over AUI-8

End-to-End FEC scheme
Targeted by this Baseline

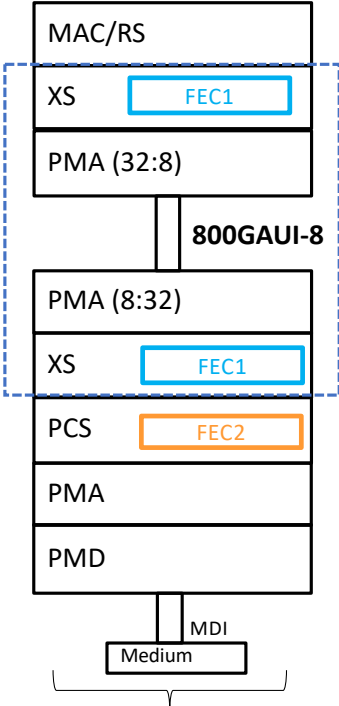

**800GBASE-CR8/KR8,
800GBASE-VR8/SR8
800GBASE-DR8/DR8+**

Concatenated FEC scheme
Other FEC schemes / evolution remains open

Other PMDs (TBD)

Segmented FEC scheme

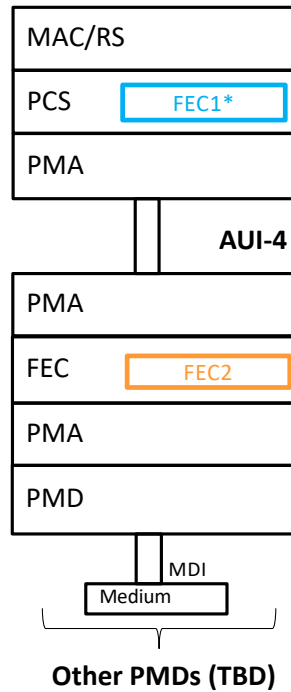

Other PMDs (TBD)

800GbE Architecture : FEC schemes over AUI-4

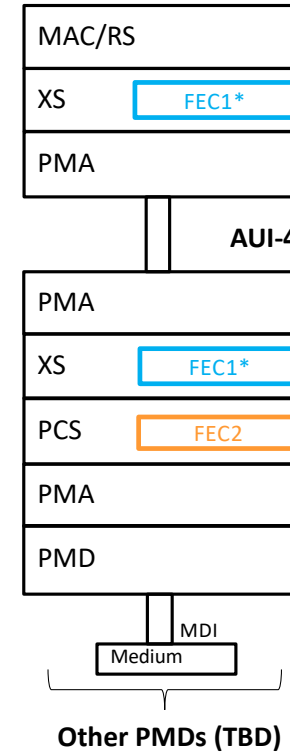

End-to-End FEC scheme

Concatenated FEC scheme

Segmented FEC scheme

* FEC1 could be the FEC proposed in this Baseline or could be a different FEC – pending analysis

Outline

- Introduction
- PCS/FEC/PMA Baseline proposal
- Implementation considerations
- Architecture considerations
- **Conclusion**

Conclusions

- This Baseline: 800GbE PCS, FEC and PMA for 8 x 100G PMDs and 8 x 100G AUIs
- Supports all adopted 802.3df copper and optical PMDs baselines using 100G/lane
- Highly leverages existing 400GbE specifications
 - 2 x 400GbE (Clause 119) with minor modifications to the specifications
- Highly leverages existing 400GbE implementations
 - Enable re-use of per-lane AM lock, FEC interleaving, FEC encode/decode, scrambler, transcoder
- Enables faster time-market for 800GbE (8 x 100G/lane) implementations
 - Maximizing technology reuse and existing industry investments
- Fits into an overall 800GbE Logic Architecture, and does not constrain future FEC schemes using 200G/lane AUIs and PMDs and/or Coherent PMDs
- 1.6TbE PCS/FEC can be chosen independently of 800GbE
 - Decisions made in this baseline will not restrict options / choices for 1.6TbE

Thanks !

Straw Poll

- I would support adopting the 800GbE PCS/FEC/PMA baseline for PHYs using 8x100G PMD lanes as described in this presentation
 - Yes :
 - No :
 - Need more information :
