May 15, 2023

Background and Introduction (I)

- An important and common Chip-to-Module (C2M) Channel is the so-called “Universal Port” C2M, as shown in the following diagram

- The loss of the C2M channel (TP0-TP1A) budget is determined/bounded by the bump-to-bump, ref PKG, and DAC loss budget, which are trending ≤ 40 dB, ~ 6 dB, ~ 16 dB, for 224 Gbps-PAM4 signaling.

Background and Introduction (II)

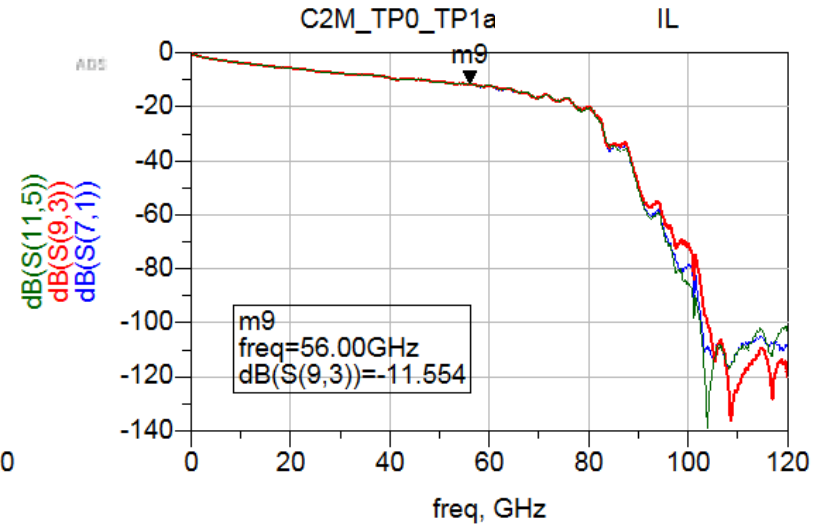

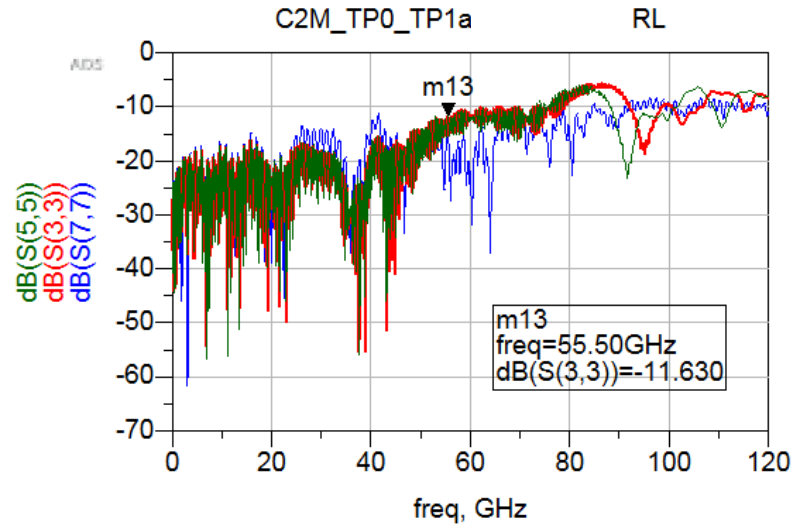

- We leveraged our established/validated C2M channel design tool-flow-methodology (TFM) (e.g., oif2022.355.00, oif2022.498.00, oif2023.032.00) to create this C2M channel design A to support 224Gbps-PAM4 “Universal Port”.

C2M Channel Design A for “Universal Port”

Component	Insertion Loss TP0-TP1a (dB) @ 56GHz
	<i>Design A</i>
Host PCB via	0.85 dB
Host PCB Trace	4.5 inch (1.3 dB/inch)
Connector	1.62 dB
HCB	3.55 dB
Total	11.6 dB

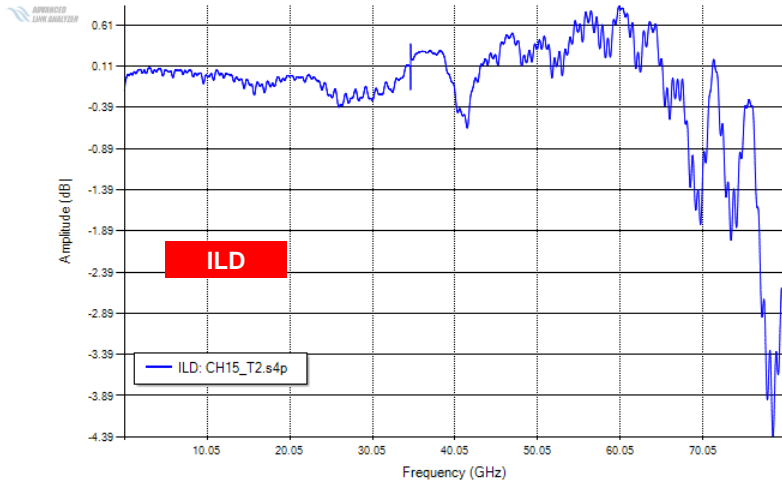

C2M Channel Design A Characteristics (I)

- IL: 11.56dB @ 56GHz
- RL <~11.6dB (<56GHz)
- FEXT < 37.3dB (<56GHz)
- NEXT < 47.5dB (<56GHz)

C2M Channel Design A Characteristics (II)

Channel Viewer: [16] CP: ILD

Channel Viewer: [18] CP: ICR

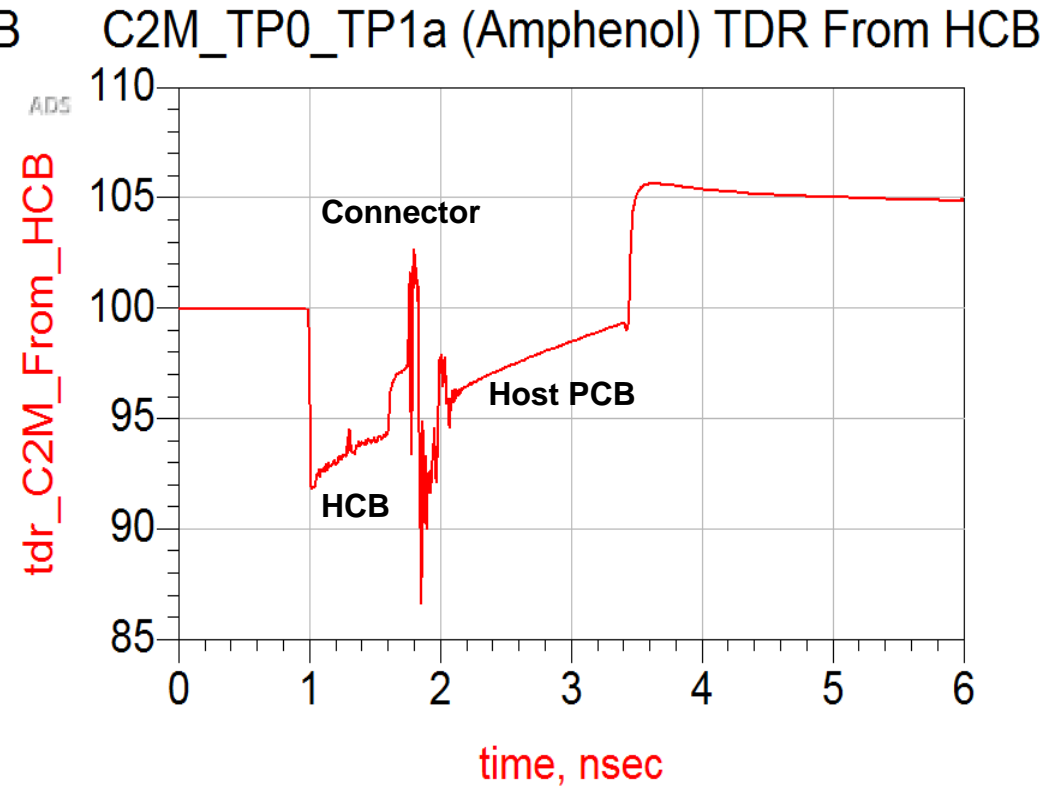

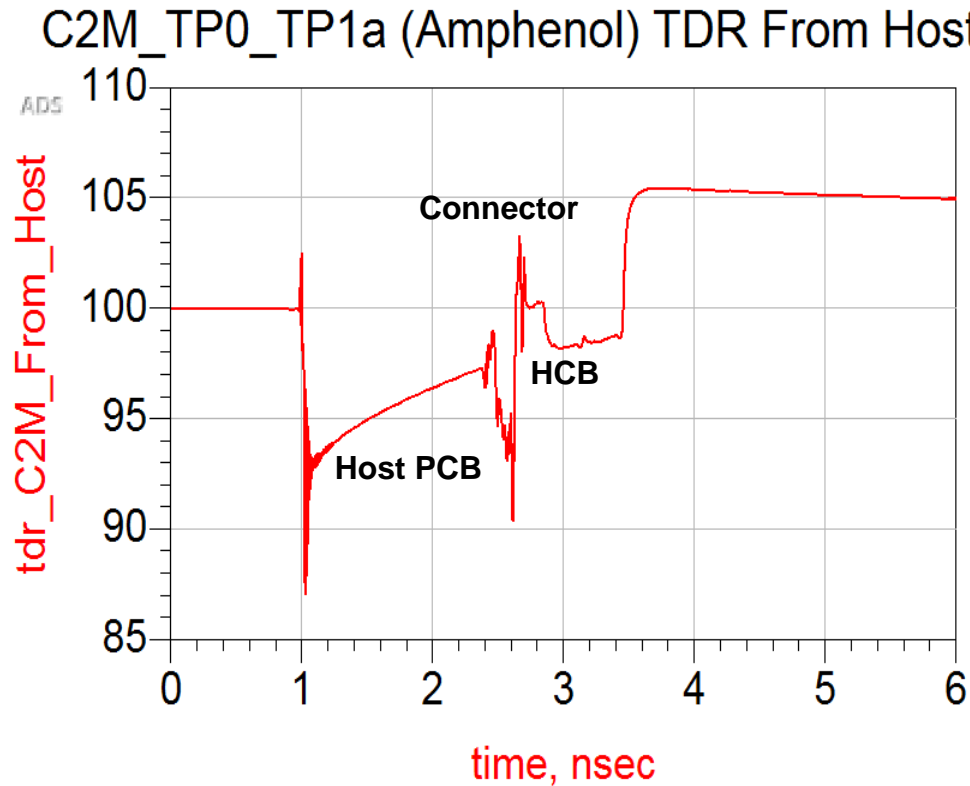

Channel Viewer: [0] SBR: Sdd21

- $ILD < \pm 1 \text{ dB} (< 56\text{GHz})$
- $ICR > 25 \text{ dB} (< 56\text{GHz})$

C2M Channel Design A Characteristics (III)

[S] parameter BW DC-120GHz

Summary

- We have created a C2M channel Design A supporting “Universal Port”
- This C2M channel includes PCB-Via, PCB, connector, and HCB
- This C2M channel has:
 - An IL (TP0-TP1A) of ~ 11.6 dB at 56 GHz
 - RL $< \sim 11.6$ dB at ≤ 56 GHz
 - FEXT < 37.3 dB, NEXT < 47.5 dB, at ≤ 56 GHz
 - PCB IL of 6.58 dB/reach of 4.5 inch (with 1.3 dB/inch) at 56 GHz
