In 30.5, one should not describe these MAU types as "bidirectional" when about a hundred other bidirectional types in the BASE-BX, BASE-BR, BASE-PR, BASE-PQ and BASE-T families are not described like that. Writing "one single-mode fiber" was believed to tell the reader that it's bidirectional. In any case, Ethernet PHYs are always bidirectional, even when the medium isn't. Here we are talking about MAUs which are like PHYs.

SuggestedRemedy

Even though it's in the project title and the abstract: in 30.5, for consistency with the hundred other MAUs that use a medium bidirectionally, delete "bidirectional" here.
A proposal to maintenance would need to address BASE-T as well as optical.

Response *Response Status* **C**

REJECT.
See D2.0 comment #137.
Response to D2.0 comment #137:
"Keep the current description, remove hyphen from "bi-directional".
Maintenance required for previous BiDi descriptions in CL30.5."

Comment Type **E** *Comment Status* **A** *consistency_dj*

Editing instruction reads 'as amended by IEEE Std 802.3dj-20xx' - this standard seems AHEAD of 802.3dj, which hasn't even entered working group ballot. This appears to have been in response to comment 146, but comment 146 didn't call for building off of edits made in 802.3dj, it merely pointed out dj was extending the space. The error appears to go beyond the editing instruction - the line "10101xxx = reserved" which is struck out and amended is ADDED by the d1.5 of dj... Further, the edit isn't even fully consistent with the most recent amendment I know of, 802.3df, since it shows 11xxxxxx as an insert, and that was already inserted by 802.3df, nor with 802.3dj, because that shows 1011xxxx inserted by dj d1p5. FYI, correlation with the completed and in-progress drafts AHEAD of this draft is why comment 112 is unsatisfied.

SuggestedRemedy

Consullt with WG leadership on amendment order. Assuming there are no other drafts ahead of this amendment which change Table 45-7, change editing instruction to indicate "(as amended by IEEE Std 802.3df-2024)"
Change edit to table 45-7, to reflect the state of the table at that amendment. (if it is df, then: remove underscore from: the bit numbers (7 6 5 4 3 2 1 0) and 11 x x x x x x = reserved rows
Retain 1011 x x x = reserved row with underscore
Replace 10101x x x = reserved, with "1 0 1 x x x x x = reserved"(in strikeout)
and keep remaining inserted rows (101011xx and below) as in draft.

(If there are other drafts after 802.3df that edit this table, adjust editing instruction and edits appropriately)

Comment Type **T** *Comment Status* **A** *new*

If precoding is allowed as an option:
There are precoder enable registers (1.600 to 1.603). There are precoder request (1.604) and precoder request status (1.605) registers, but we would add precoder ability registers and let the network operator choose when to use precoding (unlike CR/KR where precoder ability is known and its use is negotiated during Training).
Precoding can be implemented or used in one or both directions or (default) neither.

SuggestedRemedy

Consider including precoding (135.5.7) as an option. This could be controlled by the network operator according to experience.
If so: in 135.5.7.2, before "a 50GBASE-R or 100GBASE-R PMD that", insert "a 100GBASE-BRx PMD, or".
To make what is already a long and difficult sentence clearer, lay it out as a bulleted list:
connected to 100GBASE-BRx, or
connected to PMD that includes..., or
are part of a C2C
Change
The PMA shall provide 1/(1+D) mod 4 precoding capability on each output lane and may optionally provide 1/(1+D) mod 4 decoding capability on each input lane.
to:
The PMA may optionally provide 1/(1+D) mod 4 decoding capability on each input lane. An PMA shall provide 1/(1+D) mod 4 precoding capability on each output lane, except a PMA that is connected to the service interface of a 100GBASE-BRx PMD which may provide such a capability.
Modify PICS 135.7.7.
Add two precoder ability bits in MDIO, one for Tx and one for Rx.

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.
The group agree to use it as optional to implement and use.

Comment Type **T** *Comment Status* **A** *new*

Details for optional interleaved FEC. I believe that both directions use it or don't (rather than one way on, one way off). There is a 100G RS-FEC-Int enable bit already (1.200.5) and a 100G RS-FEC enable bit (1.200.6).

SuggestedRemedy

In Table 168-1, below 91 FEC and above 135 PMA, insert:
152—Inverse RS-FEC Optional b
161—RS-FEC-Int Optional
b Inverse RS-FEC is required to convert between RS-FEC and RS-FEC-Int (see 152.1.2).
In Table 80-5, between 91 and 135, insert 152 and 161: O for all 100GBASE-BR.
Add a 100G RS-FEC-Int ability bit, e.g. in 45.2.1.117 RS-FEC status register (Register 1.201).
Add text in 168.1 saying that a network operator can use interleaved FEC for improved robustness, determining if both ends of the link have the ability, and setting both ends of the link to use it.
Add these registers to tables 168-2 and 3.

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.
Implement suggested remedy with editorial license.

SuggestedRemedy

Remove the hyperlink, which goes no where, and apply a character tag of “External” to "157.5".

Response *Response Status* **W**

ACCEPT IN PRINCIPLE.
Implement suggested remedy with editorial license.

Cl **168** *SC* **168.6** *P* **32** *L* **40** # 32

Huber, Thomas Nokia

Comment Type **T** *Comment Status* **A** *.0 unresolved (interoperation)*

The sentence concerning BR40 working with BR20 or BR10 as long as the shorter reach channel requirements are met is helpful, but it seems incomplete. Would is also not be true that the BR20 PMD operates with a BR10 PMD as long as the channel requirements of the BR10 PMD are met?

SuggestedRemedy

Make the sentence more generic: "A longer reach PMD interoperates with a shorter reach PMD as long as the channel requirments of the shorter reach PMD are met."

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.
See comment #58.

Cl **168** *SC* **168.6** *P* **32** *L* **40** # 58

Dudek, Mike Marvell

Comment Type **TR** *Comment Status* **A** *.0 unresolved (interoperation)*

The statement is made that the 100GBASE-DR40 PMD will interoperate with the 100GBASE-BR10 and 100GBASE-BR20 provided the channel requirements for 100GBASE-BR10 and 100GBASE-BR20 are met, however section 168.11 includes additional requirements for interoperation between 100GBASE-BR40 and 100GBASE-20 including the addition of minimum losses. Section 168.11 doesn't include minimum losses for inter-operation between 100GBASE-BR40 and 100GBASE-10 and the minimum Tx output power for 100GBASE-BR40 in the off state is -15dBm which is greater than the signal detect "fail" level of -20dBm.

SuggestedRemedy

add "except that the channel losses are specified in section 168.11". Add an appropriate table for the inter-operation between 100GBASE-BR40 and 100GBASE-BR10 to section 168.11

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.
Remove the interoperation related contents in Clause 168.6 and Clause 168.11.
Implement with editorial license.

Cl **168** *SC* **168.6** *P* **32** *L* **53** # 2

Ran, Adee
Cisco Systems, Inc.

Comment Type **T** *Comment Status* **A** *D2.0 unresolved*

Footnote a says "The RS-FEC correction function may not be bypassed for any operating distance". This is not an option, so "may" is inappropriate. Also, this statement is out of place in 168.6, which is about optical specifications.

I am aware that the same text exists in many previous clauses, but an error should not be carried over to a new clause.

SuggestedRemedy

Delete footnote a from Table 168-5, and instead add a footnote for the "RS-FEC" row in Table 168-1, stating "The option to perform error detection without error correction (see 91.5.3.3) is not supported. FEC error correction shall not be bypassed".

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.
Delete footnote a from Table 168-5.
Add a footnote to Table 168-1 to the RS-FEC row, stating "The option to perform error detection without error correction (see 91.5.3.3) is not supported.

Cl **168** *SC* **168.6.1** *P* **33** *L* **11** # 3

Ran, Adee
Cisco Systems, Inc.

Comment Type **TR** *Comment Status* **R** *D2.0 unresolved*

The signaling range for recent PMDs with 100 Gb/s per lane has been narrowed to +/- 50 ppm, to avoid possible performance degradatation.

The 100 Gb/s AUIs defined in Annex 120F and 120G support this narrower range.

See 800GBASE-VR8/SR8 PMDs in 802.3df, Table 167-7 and Table 167-8 (both amended from 802.3db) as an example of how this is implemented in new PMDs.

SuggestedRemedy

In Table 168-6 and Table 168-7, change the signaling rate range to 53.125 +/- 50 ppm.

Response *Response Status* **W**

REJECT.
802.3df uses 100ppm for all single lane PMDs.

Cl **168** *SC* **168.6.1** *P* **33** *L* **28** # 4

Ran, Adee
Cisco Systems, Inc.

Comment Type **ER** *Comment Status* **R** *D2.0 unresolved*

The row for OMA_outer (min) in Table 167-7 contains two sub-rows. This should be indicated by indentation, as done in the "Receiver sensitivity" row in Table 167-8, to clarify that these are two cases.

The phrase "for 1.4 dB <= max(TECQ, TDECQ) <= TDECQ(max)" is overly long and can be shortened to improve readabilty.

SuggestedRemedy

Indent the sub-rows starting with "for".
Change "for 1.4 dB <= max(TECQ, TDECQ) <= TDECQ(max)" to "for max(TECQ, TDECQ) >= 1.4"

Response *Response Status* **W**

REJECT.
Following dj format (e.g., Table 183-6).

Cl **168** *SC* **168.6.1** *P* **33** *L* **36** # 26

Stassar, Peter
Huawei

Comment Type **ER** *Comment Status* **A** *ınresolved (over/under shoot)*

This draft still uses "over/undershoot", In P802.3dj it was recently agreed to use "transmitter over and undershoot". Also in 168.7,1 and 168.7.7

SuggestedRemedy

168.6.1 change "Transmitter over/under -shoot" to "Transmitter overshoot and undershoot". In 168.7.1, Table 168-10 change "Over/under-shoot" to "Transmitter overshoot and undershoot". Change heading of 168.7.7 from "Over/under-shoot" to "Transmitter overshoot and undershoot". In paragraphs 1 and 2 of 168.7.7 change "over/under-shoot" to "over and undershoot".

Response *Response Status* **C**

ACCEPT.

Cl **168** *SC* **168.6.1** *P* **33** *L* **36** # 6

Ran, Adee Cisco Systems, Inc.

Comment Type **TR** *Comment Status* **A** *ınresolved (over/under shoot)*

"Transmitter over/under -shoot" is shorthand that should not be used in a standard.
The definitions in subclause 168.7.7 are actually to two different parameters, overshoot and undershoot, while "over/under-shoot" is not defined at all.
The label in the table has been changed to "overshoot/undershoot" in 802.3db.

Also, the definition subclause 168.7.7 should be aligned with the recent text in 802.3db (167.8.8) instead of older clauses.

SuggestedRemedy

Change the label to "Overshoot/undershoot (max)".
Change the text in 168.7.7 to align it with 167.8.8 in 802.3db-2022.
Change in Table 168–10 and elsewhere accordingly.

Response *Response Status* **W**

ACCEPTED IN PRINCIPLE.
See comment #26.

Cl **168** *SC* **168.6.1** *P* **33** *L* **46** # 36

Dawe, Piers Nvidia

Comment Type **T** *Comment Status* **R** *D2.0 unresolved*

It's probably not worth testing some transmitters for TDECQ and RIN with 15 dB return loss and others with 15.6 dB. The cost in paperwork may outweigh any difference in yield.

SuggestedRemedy

Consider changing 15.6 to 15 here and in Table 168-11 (simplifying and being conservative).
Then RINxOMA can become RIN15OMA.
If it is thought worthwhile, the discrete reflectances for 100GBASE-BR10 in Table 168-14 and the channel optical return loss in Table 168-12 could be made slightly worse, to spend that 0.6 dB.

Response *Response Status* **C**

REJECT.
Small difference exists in other clauses, such as clause 140.

Cl **168** *SC* **168.6.1** *P* **34** *L* **1** # 5

Ran, Adee Cisco Systems, Inc.

Comment Type **T** *Comment Status* **R** *D2.0 unresolved*

Equations 168-1 through 168-3 are not equations - they are expressions that don't mean anything without the context, which is Table 167-7.

It would be a better service to the reader if these expressions are placed directly in the table.

SuggestedRemedy

Move these expressions into Table 168-8, OMA_outer row, replacing the references to the equations.

Response *Response Status* **C**

REJECT.
Follow dj format, Table 183-6.

For improved readability, where the parameter limits seem likely to remain the same for all 3 (6) PMDs...

SuggestedRemedy

As for the first five rows, merge and straddle the triple entries for transmitter over/under -shoot, and for receiver reflectance in Table 168-7.

Response *Response Status* **C**

ACCEPT.

Cl **168** *SC* **168.6.1** *P* **42** *L* **51** # 116

Dawe, Piers — Nvidia

Comment Type **T** *Comment Status* **A** *quick review*

This says "Even though the representation of the OMAouter requirement is different from that in Clause 140, they are consistent". Here, OMAouter (min) is
max(1.1, -0.3+max(TECQ, TDECQ))
max(-2.3, -3.7+max(TECQ, TDECQ))
max(5.3, 3.9+max(TECQ, TDECQ)).
140 has:
max(-0.8, -2.2+TDECQ) or max(-0.8, -1.9+TDECQ)
max(-0.1, -1.5+TDECQ)
max(1.1, -0.3+max(TDECQ).
They are not the same, and would not be the same even if the numbers were the same; one includes TECQ and the other does not, but it has an option depending on extinction ratio.

SuggestedRemedy

Delete the sentence, it is unnecessary. The spec is clear without it.

Response *Response Status* **C**

ACCEPT.

6.3 dB doesn't seem right for the wavelengths concerned: see comment against 168.9

SuggestedRemedy

Change 6.3 to 6.0 (or 6.1); change 10.6 to 10.3 (or 10.4)

Response *Response Status* **C**

REJECT.
Based on group discussion, it should be kept to 6.3dB.

Cl **168** *SC* **168.6.3** *P* **44** *L* **18** # 62

Maniloff, Eric — Ciena

Comment Type **TR** *Comment Status* **R** *technical*

Penalty allocations include 0.9dB more than TDECQ for the 10km spec, but only 0.5dB more for the 20 & 40km specs. Penalty allocations normally include allocations for DGD and MPI penalties. DGD is 3.1/3.9/5.0 ps for 10/20/40km specs. The expectation would be that penalties for 20 & 40 kms would be ≥ those for 10 km.

SuggestedRemedy

Based on the data in (shuai_3cu_adhoc_050119.pdf) the increase in penalty from DGD is < 0.1dB for the BR20 DGD spec. MPI allocation should be comparable hence having 0.9dB penalty for for both BR 10 and BR20 is recommended. For BR40 there is an additional approx 0.1 to 0.15 dB DGD penalty, however this will be offset by the reduced MPI penalty at the higher loss. Using 0.9dB additional penalty for BR10, BR20, and BR40 is recommended, resulting in total allocations for penalties of 4.3 / 4.3 / 4.8 dB for BR10 / BR20 / BR40.

Response *Response Status* **C**

REJECT.
The group made consensus that additional analysis is needed before updating the values. Keep the editor's note.

Dawe, Piers — Nvidia

Comment Type **T** *Comment Status* **R** *new*

After RIN measurement is improved (D2.0 comments 94 and 191), the only use for square wave in the standard will be as an alternative to SSPRQ for measuring transmitter transition time (but it relies on 20% and 80% of OMAouter; OMAouter is measured with PRBS13Q or SSPRQ, not square wave, so it's not practical anyway). But transmitter transition time goes with TECQ, extinction ratio, overshoot and undershoot; they can all be obtained from the same measurement with SSPRQ. There is no need for the standard to mandate a second way. Square wave is a very untypical pattern which should not be recommended if there is a practical alternative.

SuggestedRemedy

Delete square wave from tables 168-9 and 168-10. Someone who wants to use it still can, because it still exists in 120.5.11.2.5, and the registers to advertise it and control it still exist in 45, but we should not encourage it in future.

Huawei Technologies Co., Ltd

Comment Type **ER** *Comment Status* **A** *D2.0 unresolved*

looking back at CL 140.7 and other IMDD clauses in 100Gbps, the description of TDECQ and its measurement setup has been referencing as much as possible the existing content in CL 121.8.5 and writing only the changes and differences. An example in CL140 is:
"TDECQ, and for 100GBASE-DR only, TDECQ – 10log10(Ceq) shall be within the limits given in
Table 140–6 if measured using the test setup specified in 121.8.5.1, with an optical channel specified in 140.7.5.2, using the measurement method specified in 121.8.5.3, and using a reference equalizer as described in 140.7.5.1, with the following exceptions: ....."

also double checking the content of 168.7.5.1, there seems no technical difference than what was defined in CL 140.7.5 or CL 124.8.5, except need of updates to the table references. For the sake of clarity and consistence, also avoiding misleading message of new test setp, it is recommended to update the section with references to existing clauses while only listing out the exceptions.

SuggestedRemedy

delet sections 168.7.5.1, 168.7.5.3,168.7.5.4. make appropriate references to existing clauses, so that the overall standard of 802.3 is coherent. implement with editorial licenses.

some possible languages:
The TDECQ shall be within the limits given in
Table 168–6 if measured using the test setup specified in 121.8.5.1, with an optical channel specified in 168.7.5.2, using the measurement method specified in 121.8.5.3, and using a reference equalizer as described in 168.7.5.1, with the following exceptions:
The signaling rate of the test pattern generator is as given in Table 168–6 and uses a test pattern
specified for TDECQ in Table 168–10.
— The combination of the O/E converter and the oscilloscope has a 3 dB bandwidth of approximately 26.5625 GHz with a fourth-order Bessel-Thomson response to at least 1.3 × 53.125 GHz and at frequencies above 1.3 × 53.125 GHz the response should not exceed –20 dB. Compensation may be made for any deviation from an ideal fourth-order Bessel-Thomson response.
— The normalized noise power density spectrum, N(f) in Equation (121–9), is equivalent to white noise filtered by a fourth-order Bessel-Thomson response filter with a 3 dB bandwidth of 26.5625 GHz."

or

"The TDECQ shall be within the limits given in Table 168–6 if measured using the test setup specified in 121.8.5.1, with an optical channel specified in 168.7.5.2, using the measurement method specified in 140.7.5, and using a reference equalizer as described in 140.7.5.1."

or other format that fits.

Cl **168** *SC* **168.7.5** *P* **37** *L* **21** # 15

Johnson, John — Broadcom

Comment Type **TR** *Comment Status* **A** *D2.0 unresolved*

The TDECQ test method in 168.7.5 needlessly reiterates the definitions in 121.8.5. The text of 168.7.5.1 lists test method exceptions that should be in 168.7.5.3. 168.7.5.3 has a single exception for the FFE (which is not needed because it is the same as 121.8.5.4). This clause should reference 121.8.5 and list a complete set of test method exceptions specific to Cl. 168.

SuggestedRemedy

Follow the specification method of 802.3dj D1.5, Cl.180.9.5, which includes improved descriptions of the reference receiver that are used in other test method sub-clauses.
Remove sub-clauses 168.7.5.1, 168.7.5.3 and 168.7.5.4. (168.7.5.2 becomes 168.7.5.1)
Replace the text in 168.7.5 with the following:

The TDECQ of each lane shall be within the limits given in Table 168-6 if measured using the methods
specified in 121.8.5.1, 121.8.5.3, 121.8.5.4 and 168.7.5.1, with the following exceptions:
— The signaling rate of the test pattern generator is as given in Table 168-6 and uses the test pattern
specified for TDECQ in Table 168-10.
— The reference receiver, composed of the combination of the O/E converter and the oscilloscope, has
a 3 dB bandwidth of approximately 26.5625 GHz with a fourth-order Bessel-Thomson response to at
least 1.3 × 53.125 GHz, and at frequencies above 1.3 × 53.125 GHz, the response should not exceed
–20 dB. Compensation may be made for any deviation from an ideal fourth-order Bessel-Thomson
response.
— The normalized noise power density spectrum N(f) is equivalent to white noise filtered by a fourth order
Bessel-Thomson response filter with a 3 dB bandwidth of 26.5625 GHz.
— The optical return loss is as given in Table 168-6.
— The lowest measured TDECQ values are achieved with the equalizer optimization method described
in 121.8.5. Alternative optimization methods such as minimum mean squared error (MMSE) may be
used to determine equalizer tap weights to reduce test time, and are expected to report equal or
higher values of TDECQ. These alternative methods should not be used for receiver sensitivity and
stressed receiver sensitivity calibration.

Dawe, Piers — Nvidia

Comment Type **T** *Comment Status* **R** *D2.0 unresolved*

In practice, RIN is not measured with the optical power meter method described in 52.9.6 these days, but with the scope method described in P802.3dj 180.9.11 (and T&M vendor's literature). This has the advantage that RIN can be calculated as a by-product of a TECQ measurement.

SuggestedRemedy

As this project is ahead of P802.3dj, replace the contents of 168.7.11 with a copy of 180.9.11, adjusting for the optical return loss(es) and reference Rx bandwidth of this clause. In Table 168-10, change "Square wave" to "4 or 6".

Comment Type **T** *Comment Status* **A** *2.0 unresolved (Ref_receiver)*

"Meets equation constraints" cannot possibly be right for all 3 PHYs. Also, the plot says it is receiver sensitivity but the axis says OMAouter(dBm). This needs further definition in the equations 168-4, 168-5, and 168-6 and the text to unravel. Is this saying that the RS should be sensitive to a signal with an OMA of the level of equations 168-4, 168-5, and 168-6 (depending on the PHY type) (but can be sensitive to a lower level signal)? If so, the label needs to be 3 different labels, each indicating which line they are for, and on the bottom side of the line... The equations need more words to describe the measurement. I'm sorry, but I don't know well enough what you meant to write a good solution.

SuggestedRemedy

See comment. Adjust location of "Meets equation constraints" so that it meets all 3 lines. Consider more explanatory words and converting the equations 168-4, 168-5 and 168-6 to inequalities.

The stressed receiver sensitivity test method in 168.7.13 needlessly reiterates the test method specified in 121.8.10.

SuggestedRemedy

Follow the specification method of 802.3dj D1.5, Cl.180.9.13, which points to 121.8.10 along with a short list of exceptions. Replace the entirety of 168.7.13 with the following text:

Stressed receiver sensitivity of each lane shall be within the limit given in Table 168-7 if measured using the
method defined in 121.8.10 with the following exceptions:
— The SECQ of the stressed receiver conformance test signal is measured according to 168.7.5, except
that the test fiber is not used. The transition time of the stressed receiver conformance test signal is
no greater than the value specified in Table 168-6.
— With the Gaussian noise generator on and the sinusoidal jitter and sinusoidal interferer turned off, the
RINxOMA of the SRS test source should be no greater than the value specified in Table 168-6.
— The signaling rate of the test pattern generator and the extinction ratio of the E/O converter are as
given in Table 168-6 using test patterns specified in Table 168-10.
— The required values of the “Stressed receiver sensitivity (OMAouter), each lane (max)”, “Stressed eye
closure for PAM4 (SECQ), lane under test” and “OMAouter of each aggressor lane” are as given in
Table 168-7.

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.
Keep it consistent with CL140 and remove each lane.

Comment Type **T** *Comment Status* **R** *D2.0 unresolved*

Originally, 10 km = 6 dB at 1310 nm. 10GBASE-BR10 can be at 1260 nm, so 6.2 dB. 25GBASE-BR10 and 50GBASE-BR10, also 1260 nm, are allowed 6.3 dB. 100GBASE-BR's shortest wavelength is 1303.6 nm so the same cable won't show so much loss. Calculating the channel insertion loss using the link model, it's 6.00 dB at 1310 nm 6.20 at 1260 or 6.02 dB at 1303.6 nm

SuggestedRemedy

Change 6.3 to 6 (or 6.1). Change the budget for 100GBASE-BR10 from 10.6 to 10.3 (or 10.4).

Response *Response Status* **C**

REJECT.
The group made consensus to keep it as 6.3 dB for BR10.

Comment Type **T** *Comment Status* **A** *D2.0 unresolved*

It appears that a statistical analysis is being used to arrive at the chromatic dispersion values, as documented in G.652 Appendix I. The document should clarify the approach used to arrive at the CD values. 802.3dj currently includes the following text: "The dispersion specifications are based on the statistical link design methodology documented in ITU-T REC G.652, Appendix I."

SuggestedRemedy

Add a footnote to the CD values in Table168-12 indicating the method used to calculate the dispersion values.

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.
Add to footnote b:
"The dispersion specifications are based on the statistical link design methodology documented in
ITU-T REC G.652, Appendix I.".

Dawe, Piers Nvidia

Comment Type **T** *Comment Status* **A** *D2.0 unresolved (dispersion)*

This gives the dispersion ranges for the upstream direction only

SuggestedRemedy

Add two more rows for the dispersion ranges for the downstream direction.

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.
See comment #132.

Cl **168** *SC* **168.9** *P* **55** *L* **7** # 132

Dawe, Piers Nvidia

Comment Type **T** *Comment Status* **A** *new (dispersion)*

This is to revise D2.0 comment 206.
Table 168-12 gives the maximum dispersion in the downstream direction (D to U) and the minimum in the upstream direction. But transceiver designers need to know the range for D and U separately to design correctly for dispersion.

SuggestedRemedy

Replace the two rows with four rows:
Maximum dispersion, D to U 4.6 4.2 2.5
Maximum dispersion, U to D 0.6 -3.7 -13.4
Minimum dispersion, D to U -13.9 -23.8 -42.3
Minimum dispersion, U to D -18 -32 -59
Delete note b
Add a column for the four wavelengths

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.
Replace the two rows with four rows:
Maximum dispersion, D to U 4.6 4.2 2.5
Maximum dispersion, U to D 0.6 0 0
Minimum dispersion, D to U -13.9 -23.8 -42.3
Minimum dispersion, U to D -18 -32 -59
Delete note b from dispersion rows.
Add a column for the four wavelengths

Dawe, Piers — Nvidia

Comment Type **T** *Comment Status* **A** *.0 unresolved (interoperation)*

This needs some text to introduce the table, which should also address interoperability, or not, with 100GBASE-BR10. Presumably the mixed link has to stay within the chromatic dispersion limits of the shorter-reach PMD.

SuggestedRemedy

Something like:
168.11 Interoperation between 100GBASE-BRx PMDs
The 100GBASE-BR20 and 100GBASE-BR40 PMDs can interoperate with each other (over an engineered link) provided that the fiber optic cabling (channel) characteristics for 100GBASE-BR20 in Table 168-12 are met, with the exception of the maximum and minimum channel insertion loss values, which are given in Table 168-15 for the two link directions separately. Attenuators may be used to achieve the required losses.
Interoperation between 100GBASE-BR10 and 100GBASE-BR20 or 100GBASE-BR40 is not recommended (or whatever the case is).

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.
See comment #58.

Dudek, Mike — Marvell

Comment Type **TR** *Comment Status* **A** *.0 unresolved (interoperation)*

There is only one fiber between the BR20 and BR40 PMD's so there can't be different loss specs for the two directions. To be compliant in both directions it appears that the loss between BR20 and BR40 would have to be min 8.3dB and max 10dB which is a very small range but could be specified.

SuggestedRemedy

Collapse the two rows in Table 168-15 into one row. With min loss of 8.3dB and max loss of 10dB

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.
See comment #58.

Delay constaints is a section of the PICS, not a capability or option. These are requiremetns that need to be spelled out in their own table.

SuggestedRemedy

Delete row "DC" in 168.12.3, add new section 168.12.4.1 Delay and skew specifications and renumber subsequent PICS statements. Go through 168.3 and call out the delay constraint requirments one-by-one to populate (this is where having the "shalls" would have been useful).

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.

Cl **168** *SC* **168.6,1** *P* **42** *L* **28** # 64

Maniloff, Eric Ciena

Comment Type **TR** *Comment Status* **A** *technical*

Currently the OMA (Max) values for 100GBASE-BR40 is 8.3dBm. At max TDECQ the OMA (Min) values for this is 7.8 dBm. This leaves 0.5 dB difference between Min and Max OMA_outer for BR40. This is not sufficient difference for manufacturing yield, lifetime, thermals.

SuggestedRemedy

In order to increase the Δ between min and max values, either minimum needs to be reduced or maximum needs to be increased. Due to overload concerns, there has been resistance to increasing the maximum value. Specifying a 1 dB higher minimum insertion loss will enable an increase to the maxumimum Tx power. A recommended solution is to specify a minimum link loss of 11 dB in Table 168-23 and a maximum OMA_outer of 9.3 dBm.

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.
After CRG group discussion, there's consensus to keep the minimum link loss of 10 dB in Table 168-12 and increase maximum OMA_outer and Average launch power (max) in Table 168-6, Average receive power (max), Receive power (OMAouter) (max), and damage threshold in Table 168-7 by 1 dB for 100GBASE-BR40.

Cl **168** *SC* **168.6,1** *P* **42** *L* **28** # 63

Maniloff, Eric Ciena

Comment Type **TR** *Comment Status* **A** *technical*

Currently the OMA (Max) value for 100GBASE-BR20 is 0 dBm. At max TDECQ the OMA (Min) values for this are -0.3 dBm. This leaves 0.3 dB difference between Min and Max for BR20. This is not sufficient difference for manufacturing yield, lifetime, or thermals.

SuggestedRemedy

In order to increase the Δ between min and max values, either minimum needs to be reduced or maximum needs to be increased. Due to overload concerns, there has been resistance to increasing the maximum value. Specifying a minimum insertion loss will enable an increase to the maxumimum Tx power. A recommended solution is to specify a minimum link loss of 1.2 dB in Table 168-12 and a maximum OMA_outer of 1.2dBm.

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.
After CRG group discussion, there's consensus to keep the minimum link loss of 0 dB in Table 168-12 and increase maximum OMA_outer and Average launch power (max) in Table 168-6, Average receive power (max), Receive power (OMAouter) (max), and damage threshold in Table 168-7 by 1.2 dB for 100GBASE-BR20.
