

Items to Close

Powering Parameters

- Defining a new power mechanism and/or protocol is out of scope
- Do we need a selection of voltages/currents? Clause 104 or 189
 - Consider applications such as: Cameras, Lidar, Radar, Displays, Zonal aggregator box
 - Consider future 48V systems
- Noise from Power distribution, circuitry
- Impact on MDI interface specs, e.g. impedance
- Impact on cables, is a different gauge needed?
- Power delivery over coax

Other topics for spec

- Autoneg for Clause 202
- Autoneg for Coax (201 & 202)
- Reducing times (reset, training, link-up, etc.)
- Distinct Identity of 201 vs 202
- Broadband noise environment test (ensure necessary equipment is readily available)

Future

- Create a summary presentation of 3dm to share with WG when we go to WG ballot
