Comment Type TR Comment Status D

Is there experimental result?

SuggestedRemedy

Proposed Response Response Status W

PROPOSED REJECT.

The comment does not provide the CRG with enough information to understand the specific change that the commenter proposes, as there is no suggested remedy and the comment itself is an open question.

The content of the IEEE 802.3-2025/Cor 2 draft D3.0 was discussed during the Task Force phase of the project. It is based on contributions such as the one available at: [https://www.ieee802.org/3/dr/public/Torres\\_3dr\\_01\\_280725.pdf](https://www.ieee802.org/3/dr/public/Torres_3dr_01_280725.pdf)

The value 3.9 has less digits as the other requirements. So, is given with less accuracy.

SuggestedRemedy

Change 3.9 in 3.90

Proposed Response Response Status W

PROPOSED REJECT.

The IEEE 802.3 Style Guide states the following: "Do not include any separators in the digits to the right of the decimal point or include any trailing zeros in tables or in text." ([https://ieee802.org/3/WG\\_tools/editorial/requirements/words.html#numbers](https://ieee802.org/3/WG_tools/editorial/requirements/words.html#numbers))

Comment Type E Comment Status D

For the 25GBASE-AU column, the TDFOM\_0 value is currently listed as 3.9, rounded to one decimal place. It is recommended to report this value to two decimal places to maintain consistency with the other columns.

SuggestedRemedy

The way the newly inserted paragraph is written can be interpreted as if the reader is allowed or required to choose TDFOM\_0. ("TDFOM\_0 is chosen" uses the same phrasing of "TDFOM is calculated", which is normative)  
I assume this is not the intent, and instead it is an informative statement explaining how the values of TDFOM\_0 were calculated.

SuggestedRemedy

Change this statement into a NOTE, which is informative, and place it after Table 166-16.

Suggested NOTE phrasing:

NOTE---The values of TDFOM\_0 in Table 166-16 are calculated such that an ideal signal with very high bandwidth, without emphasis, and with no noise or other impairments, has a TDFOM of 0 dB.

Proposed Response Response Status W

PROPOSED ACCEPT IN PRINCIPLE.

Add a footnote b for the parameter TDFOM\_0 to Table 166-12 with the following wording: "These values are calculated such that an ideal signal with very high bandwidth, without emphasis, and with no noise or other impairments, has a TDFOM of 0 dB."
