

---

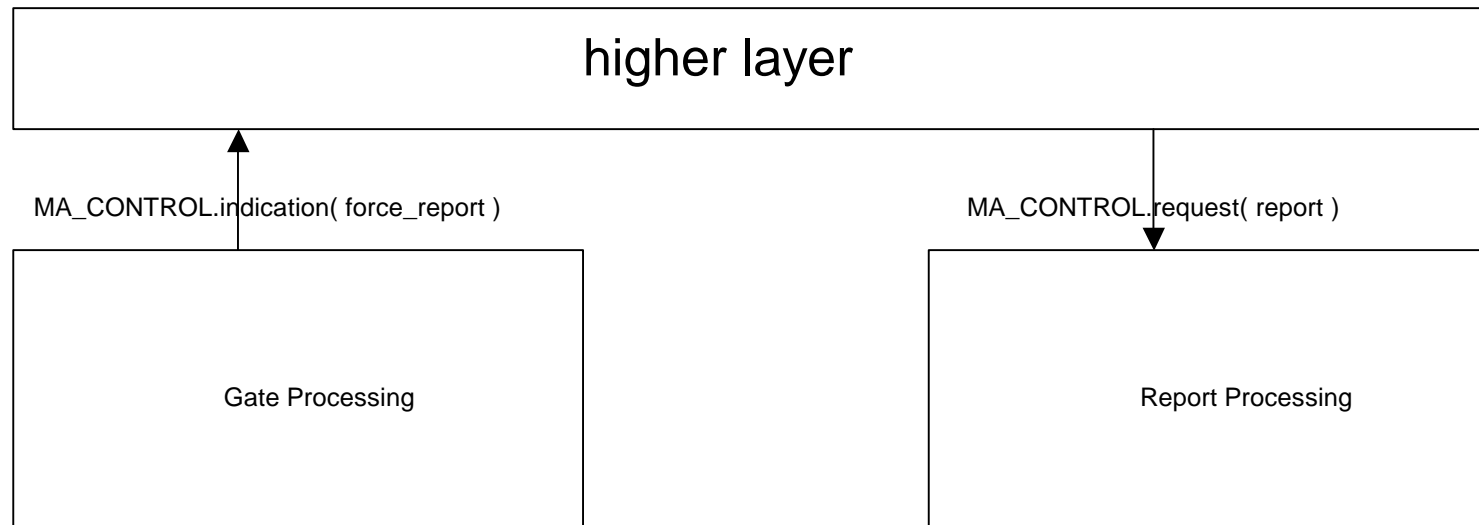

When GATE MPCPDU with (force\_report == 0) has come,  
how ONU should do?

Yasuo Ogura

NTT

# Proposal : Add some comments when ONU don't send anymore

---

```
(a) If ( force_report == 1),
    if ( some data in the buffer of the ONU ) then
        ONU should send a REPORT MPCUDU properly.
    else
        ONU should send a REPORT MPCUDU with empty content.
    endif

(b) If ( force_report == 0)
    ONU may send a REPORT MPCPDU whether there are some data or not.
```

When ONU don't send any data or MPCPDU, ONU should send IDLE symbol pairs.

( I feel that "higher layer" will achive these behaviors in the box of the broken line.)

( I feel that "MPCP layer" should achive this behaviors out of the box of the broken line.)
