

FDD Downstream frequency band and center frequencies

AVI KLIGER, BROADCOM

FDD Downstream frequency band and center frequencies

- EPoC shall specify
 - A fixed low edge frequency of the downstream band
 - Use 108 MHz as the lowest supported frequency by EPoC
 - A fixed high edge frequency of the downstream band
 - Use 1200 MHz as the high edge frequency supported by EPoC
 - A configurable center frequency of the OFDM channel
 - Shall have a granularity of 2 MHz and should be aligned with DOCSIS center frequencies
- How would we deal with different options by geography-plant options?
