   REQUESTED REVISION:
10
     STANDARD: 802.3cd-2018
11
     CLAUSE NUMBER: 136.8.11.7.3
12
     CLAUSE TITLE: Timers
13
   PROPOSED REVISION TEXT:
   Remove second sentence in the first paragraph of the description for the
15
    variable "max wait timer". This sentence is "It is started upon entry to
16
    the INITIALIZE state of the PMD control state diagram."

25
    RATIONALE FOR REVISION:
26
    There is a discrepancy in IEEE 802.3cd-2018 Clause 136.8.11 related to
27
    the start of the max wait timer. The PMD control state diagram from
28
    Figure 136-7 (pg 210) shows that the variable "max wait timer" starts in
29
    the TRAIN LOCAL state. However, the "max wait timer" variable definition
30
    in 136.8.11.7.3 (pg 209) states that the variable starts upon entry into
31
    the INTIALIZE state.
32
33
    The consensus among a few IEEE 802.3 voters was that the variable
```

The consensus among a few IEEE 802.3 voters was that the variable definition in 136.8.11.7.3 is incorrect and should be changed "INITIALIZE" to "TRAIN_LOCAL". A cleaner solution is remove the sentence because the specification typically does not directly include the state diagram precedence in any clause. Rather it is indirect by referring back to 21.5.

In Clause 136 we have...
136.8.11.7.5 State diagrams

The notation used in the state diagrams follows the conventions of 21.5. State diagram timers follow the conventions of 14.2.3.2. The notation ++ after a counter indicates that its value is to be incremented.

From 21.5 we have... 21.5 State diagrams

State diagrams take precedence over text.

The conventions of 1.2 are adopted, with the following extensions.

```
1
2
3
    IMPACT ON EXISTING NETWORKS:
4
    None, if implementers are following Clause 21.5.
