REQUESTED REVISION:
STANDARD: IEEE Std 802.3-202x
CLAUSE NUMBER: 144.3.5
CLAUSE TITLE: Allocation of LLID values

PROPOSED REVISION TEXT:

In the line "-- Any ULID or GLID assigned to this ONU by management" (the last line of this subclause), strike out the words "or GLID".

RATIONALE FOR REVISION:

The purpose of the Group Link Identifier (GLID) mechanism is to partially offload the upstream scheduling functionality and resources from the OLT to multiple ONUs. The GLID is defined as virtual LLID that allows the OLT to schedule a single grant (transmission window), which is further subdivided among actual traffic-bearing LLIDs by an ONU. GLIDs are only used for scheduling and statistic querying, so they only ever appear in GATE and REPORT MPCPDUs and in OAM TLVs.

The ONU shall not and cannot accept envelopes with GLID identifiers because the GLID values may never appear in envelope headers. As clearly stated in GLID definition in subclause 144.3.4.4, "The actual envelope transmission is identified by a PLID, an MLID, or a ULID value, associated with a specific MAC instance that sourced the data (i.e., the LLID field in the envelope headers may only contain a PLID, MLID, or ULID, but never a GLID)."

The text "or GLID" in the last line of subclause 144.3.5 is a mistake and needs be deleted.

IMPACT ON EXISTING NETWORKS:

None. The standard already contains a requirement for GLID to not appear in envelope headers. This MR just removes a confusing statement requiring ONUs to accept such values.
