Further to our previous liaisons, we would like to inform you that the Subscriber Layer 1 Service Attributes Technical Specification has been published as MEF 63. All published MEF specifications are available at: <https://www.mef.net/resources/technical-specifications>

MEF 63 defines the service attributes for a UNI-to-UNI Layer 1 service for the following client protocols: Ethernet, Fibre Channel, SONET and SDH.

Work is also underway on a partner specification defining Operator Layer 1 Service Attributes, for both UNI-to-ENNI (access) and ENNI-to-ENNI (transit) Layer 1 services provided by one Operator to another or to a Service Provider. A draft for review is planned for 2Q 2019 and we will provide it for comment when available.

The forthcoming MEF meetings are:

- January 28-31, 2019 - Hong Kong
- April 29 - May 2, 2019 - Dubrovnik, Croatia
- July 29 - August 1, 2019 - TBD
