Dear Mr. David Law,

The OPEN Alliance TC7 is responsible for defining automotive requirements for several optical Ethernet standards. Within this group, OPEN Alliance members provide expertise in the areas of fiber optics technologies, automotive requirements and implementations. OPEN Alliance would like to provide these technical elements to both the IEEE 802.3cz and 802.3.dh Working Group via a liaison relationship.

The main goal of this relationship would be to promote a common understanding of Multi-gigabit optical Ethernet for automotive applications.

We hope you will consider our proposal for OPEN Alliance and IEEE 802.3cz/ 802.3dh Working Group to form a liaison relationship and leverage the joint work between our organizations.

We look forward to hearing back from you and a continued working relationship in the future.

Best Regards,

Samuel Sigfridsson

OPEN Alliance Chairman
